Medieval philosophy of education pdf

There is so much good that you can do with a degree in theology and ministry other than the traditional path of a religious leader. Not only will you help people on their own spiritual journeys, you will improve your personal understanding of religious practices that will help you become a stronger leader and enrich your personal life. The degree of online theology is earned by professionals who are preparing for a career in ministry, religious education, missionary work, Christian education or theological studies. But, keep in mind that this degree can be applied to any calling, many professionals who choose this important plan for an active career as a clergy or in a religious ministry. Laypersons - those who are simple members of the church-can also attend faith-based colleges and earn theology degrees simply to gain more Christian ideology. The education received also translates well as religious non-commercial or community work. An online theology degree or ministry program is best suited for those who want to integrate their religious values with a career challenge. CAREER PATHS can do much more than be a pastor or minister with a theology and ministry degree. While these types of careers are certainly beneficial to the right people, they are not the only option. For example, studying theology, you get a wide range of critical thinking skills that can be applied to different careers, including business and management roles. You get excellent writing and communication skills that apply in many different industries and you could use your skills in the career of a journalist, manager or writer. You also get a deep understanding of the ethics that can be applied to a career as a police officer or politician, among many other professions. There are many benefits to studying theology, but most importantly, you have the opportunity to work in an area that many people find useful and fulfilling. In the right position, you can help people through guidance and counseling. While studying, you will gain skills like writing and communication that apply to almost any industry, giving you many options after graduating from the online theology and ministry program. Professor of Theology : If you want to shape the future of theology and ministry, you could work as a professor of theology. In this position you will develop courses, classroom assignments and (most importantly) teach the basics that participate in religious studies. With proper education, you can probably teach a wide range of religious-related subjects, including ethics, history and counseling. Although the figures are for all post-secondary teachers, this career has income of \$76,000, and the top 10% can be expected to earn over \$170,000 a year. This position is expected to grow by 12% between 2016 and 2026, making it a solid career those interested in theology and religion. Marriage and family therapist - After all, we all have problems with our family. This happens, but fortunately there are therapists who have the skills and training as well as the dedication to help us get through these problems. While a master's degree and licensing is usually required, an online theology and ministry degree is an excellent start to this profession, especially if you plan to provide religion-based counseling. This profession brings an average salary of \$48,790, which may seem small for a career that requires a master's degree. However, the job also has expected job growth of 23%, making it one of the best for people who desire a stable, reliable career area. WHO IS THE IDEAL CANDIDATE? Does theology ministry degrees sound like a great option for you? Then your next step is to seriously consider whether or not you would be the perfect candidate for one of these online programs. There are many qualities that are important for theology and the ministry of the student, but it is probably the most important thing that you have a strong believe in the importance of religion. You certainly don't have to subscribe to one set of religious beliefs to take the course; for example, you don't have to be a Christian to study Christianity, but the belief that religion is useful, improving the power of life is important, since this mentality will provide a foundation that you should remain motivated in your career. You should also have the desire to guide people through guidance, advice and support. People who study theology often become community leaders, either in their specific roles or by example, so you should be prepared to guide people through their religious journeys. Finally, the desire to apply your theological knowledge to help people will be crucial. If you have these qualities, you can enjoy your career by working with theology or ministry. WHAT SHOULD I LOOK FOR? Students should note that not all colleges in the ministry or seminary have recognized accreditation. Many degrees of mill fraud cause Christian phrasing to lure in online students. In addition, some online degree ministry programs are offered by public licensed schools, supported by unrecognized private accreditation agencies. An online degree of seminary from them cannot be accepted outside a particular state, denomination or religious group. For broad recognition of the online degree of the ministry, look for programs accredited by institutions recognized by the Higher Education Accreditation Board (CHEA). The Transnational Association of Christian Colleges and Schools (TRACS) accredits Christian colleges that offer certificates, diplomas, bachelor's degrees and diplomas designed to prepare students for Christian ministries. The Association of Theological Schools (AT) Accreditation Commission is the main accreditation agency for seminaries. Association Higher Education (ABHE) is also a recognized CHEA accreditation agency. The Association of Advanced Rabbinical and Talmudic Schools (AARTS) is approved by the CHEA for Jewish programs. Online theological programs typically cover topics such as the scriptures, doctrines, history of religion, music, church governance, and leadership. A bachelor's degree may be enough to start a career in theology or ministry, but many clergymen get at least a master's degree - either in theology (Th.M.) or divinity (M.Div.) - to get a leadership position. There is also a doctorate in theology. Graduates of this degree can continue the career of a professor of theology or a clergyman. Professors usually publish research on religion, but some clergy also study and write. The best educational credentials in this field include the Ministry's Doctor (D.Min.), Ph.D. and Doctor of Theology (TH D.). COSTYou can find the right degree for your needs when enrolling in an online theology and ministry program that fits your budget and schedule. Click on the program below to get information about tuition, accreditation and acceptance requirements. For my school project I made a journal of medieval medicine. I'll show you the steps of how to make your own fun extra project at the end of making one of the recipes in the book. You will need... - Cardstock or normal paper- Sharpie - Tea - Rope / Something to associate with Extra project: - (All you need for your recipe) - I used essential oils so ... cinnamon, eucalyptus, cloves, lemon, rosemary. Go online (I went to Pinterest) and find however many different medieval medicine recipes that you want to use in the book. I used four recipes. Next, no matter how many recipes you choose, take half the paper. (I used cardboard.) Then you cut the paper in half, so that the size of the book will be about the same size as a small magazine. Make a cup of tea, just hot water and tea bag, no actual tea, so there is no milk or sugar, and put it in a large cup. Mash the paper and put it in a cup for 15-30 seconds, then remove the paper and smooth it to dry. Once the paper is dry, write your recipes on paper in pencil so you can check the spelling and size. Then go your recipes with a sharpie or fineliner. I used a sharpie so it would be bigger and easier to read. Only write on one side of the page, so it will be easier to read when done. I also decided to make a cover and a table of content. Make sure all the papers collide in the same way and are lined up straight. Put the recipes in order (especially if you've made a table of contents.) then use a punch hole to top corner of the pages. (You can make one hole like me or three along the side.) Use a piece of rope or string to tie the page together with the bow and make sure to double knot it. If you want to something fun and extra to your project, chose one of your favorite recipes and recreate it. I chose 'Thieves Oil Blend'. I used essential oils to make this recipe. The ingredients I used were 20 drops of cinnamon essential oil, 15 drops of eucalyptus essential oil, 40 drops of clove essential oil, 35 drops of lemon essential oil, and 10 drops of rosemary essential oil. Next, I put all the ingredients in a small vile and shook for 2 minutes. Now I can use this to clean my sinuses anytime my nose is stuffy or I feel hard to breathe through. Now you're done and ready to show your friends, family, classmates and teacher! Enjoy showing off your work. 3D printing is a relatively simple thing to do and it doesn't take much work to do, it will only take some time. You can do a lot of things using a 3D printer, big or small. An example would be this medieval model that I made using a 3D printer to make a castle and a dragon. The things you need to do is...- a 3D printer. Some thread. - A computer with 3D printing software. In this case, I use Makerbot Printing for a Makerbot 3D printer, but you can use any software as long as it works with the printer. - Wood for the landscape. You can create a landscape the way you want to do it, but I use wood for my landscape. The plan to do it is not so much, you just have to ... - Start printing models.- Do something else while you wait for it to finish, most likely work on the landscape for models.- That's it. First, you need to download files for 3D printing models that you want to print for your creation. There are several websites that have a wide selection of 3D printing models, but I decided to use Thingiverse to find 3D printing models for my creations. You can use any 3D dragon print or 3D print lock that you can find on the website that you chose, but if you want to use the ones I chose, here are the links for them: Castle and Dragon.Once you have found what you want to print, click that big blue button that says: DOWNLOAD ALL FILES to download the files. If you're using Google Chrome, it should let you know that you've downloaded files in the bottom left corner. Now it's time to prepare the files for printing. Show the file in the folder and click on the file on the right. Once you've clicked right on the file in the folder, come over and click Extract All.... The reason why it is good to do this is because it allows files to be opened in 3D printing software. If you don't, sometimes it will be blocked and you won't be able to open the file in the software. It doesn't always happen, but it to do this on occasion, so you can insert files into the software. This next step is pretty easy to work with, as it already says you need to do. First, go to the software you use to 3D print this model (Makerbot in this case). Opening, inserting and printing models can be different for different 3D printing software, so we're just going to focus on Makerbot printing. For Makerbot Print, press the red button with the Add Model button, and it must open a folder that contains files that can be opened in the software. Click on the file and open it. It should start saying: Insert file (s), in which you just have to wait a bit until the model appears on the platform. Open other files on different platforms and get ready to print. Finally, all you have to do is download the thread (on the printer, scroll up to Filament and select Load Thread), and click that says: Print. After that, you just have to wait for a long time for the model to finish printing. Before you start printing, make sure the thread doesn't intersect with you, otherwise it will be stuck and there will be a piece of your model missing. Also, make sure that you have the correct color thread that you want your model to be, otherwise, unload the thread by procising the wheel on filament and press the wheel on The Unload Filament. Repeat this step for other 3D printing models (or parts of the model). If you prefer to have 3D models on their own (or you already have a landscape), it's best to make your own landscape for your models that you have printed out. There are many ways to make your landscape so you can choose whatever you like. For me, I decided to cut some wood and painted it with acrylic paint, which is a very basic and easy way to create a landscape. Now, all you have to do is assemble landscape and 3D printed models, with glue or with a different kind of method. Once you've done this, you've officially finished making a simple medieval model; nothing too complicated, but it's a very neat model that you can use for decoration.
