Sennheiser hd 212 pro

Average score: 4.0 (22 reviews based on 4/5) 4 reviews18% 14 reviews64% 2 reviews9% 1 user review5% Means more for Sananajsir HD 212 ProEven in headphones dg, I used them for recording in my own bottom. They are silver headphones with black ear phading. They're not canceling noise, but they cancel a bit of background noise. Input jack is standard 3.5 mm, so they just make great headphones for listening to music on the go. I bought these headphones from the guitar center for \$70 <a href=

these headphones are very light and extremely comfortable and comfortable. Ears are given a lot of threshing, which helps to prevent a little noise. It is also extremely long (about 7ft) which comes in good which recording sit because it allows you freedom to move around without taking them. They sound amazing too. The blend of boss and treblast is perfect. The only thing I don't like about their headphones is that they don't have to stay very well on their heads. If I want to bend to get something, they're fine, but there's a little head explosion while playing. These headphones are very durable and do not feel affordable. I've dropped them a decent amount without any visual or audio damage. Overall, these headphones are great. I'll not boast about it and they're the best, but they sound like you'd expect from the \$70 headphones. It's also great to listen to music only. This review was originally published 5 years using it for Sananajyser HD 212 Prol. This is my first purchase. I bought a lot of people since. But I keep watching movies or playing board again, without bothering the neighborhood. Today, the foam has gone up. The rest is right. Listen to me, though less loaded. I don't use it to mix. But I like the sound that it gives my keyboard the sycosity. Price for money right, but it's a matter of taste and use: try before buying! (When I don't say, drop, I'll say: Go to buy Grado!) Shall I make this choice again? For my keyboard, yes, low price! 1 people found this review wizard Sananhaser HD 212 ProAs have already said extensively, the significant refund amount of this headset is so far very low key. It seems that this fault becomes a real asset when used in a noisy environment So I have got these headphones to use with my player in my daily shilling (subway and street), and powerful boss Between sound-communication and very accurate, the direct result is that you can listen to music very properly even in subway transactions, which has never happened before with other headphones or headphones that forced me to push volume Health problem, I use it daily for several months and it's very solid (even if it's plastic!) , extremely delicate with cable discounts (and too long in it) that I had to change immediately. However paint is peeling plastic, then it is not already a crazy aesthetic, it is not better. The comfort level is very average, not unpleasant but not really comfortable and comfortable, it's not even suitable for long use. It doesn't light up and too large and does not interfere when wearing around the neck. As a result it is a headset that I highly recommend it for use in a noisy environment, but not for use in a quiet environment where I will be more than one comfortable and comfortable play, open and overly bossy right. Sananajsir HD 212 ProComfort level is not bad for price range, but is difficult to keep hours away. Power levels, a qasawa and headphones look solid, but the cable is more delicate than paper! After a few months started undress to grab an attached headphones, it's not good... Ok for the sound but there is a big shock in a very unpleasant boss to hear music that clears a nightmare. Sananhaser HD 212 Prol bought this headset to complement its other headsets, Sony, ABG. Listen to music at work. Very bad idea, it's a very marked bottom, suddenly we have the impression of being in a small government in a nightclub too. Absolutely uneasy, and listening to music in their headphones is a success over 20 minutes. Short, especially not buying this model, is much better for less. This good selection is marketing, dj headphones feel! Embarrassing. Waste garbage.... 2 out of 1 people found this review wizard is this headset for about Sannasyser HD 212 Prol 3 years, I use to mix, but now just to mix home studio for me (to mix, I switch to another product). The price is good. I get it very strong, but the cable that I had to change. The cable is not too long and not a surplus, which is very deprecated for use in the home studio. If you work together, find a way and change all the high-volume boss who eat the rest. TRS Old People To play a perfect, over time, no longer a far-off impression of the boss. Honnatimant? This is a bad bad Autrechose spends the selected speed. (I don't spit on hardware for free, but it's very expensive for a model enthusiast to play it. A good play length and a simple double or triple unfortunately.) No ranking. Edit: Okay, I'm better! In this case, a Berdinaazac DT990-Pro. It's revision, HD 212Pro is really forgiveand unnecessary. I keep it for the ruptanus when the amps is and it has the resin pods and console. Unless you want to cost boom booms in public transport, then run away like a play. Apart from a bad sound, you'd look like a puppet... Six. 1. How long do you use this-- Sananayser HD 212 Pro-1 Helper to assess how long do you use it? It will be a year now— so special that you like the most and the least? +: Price flexible design Long cable easy for this really good-: a little bit less a little piece with too strong-you tried many other models before buying? Yes, but other headphones are really behind in this price range- how do you rate the quality/price? With the best experience, do you have to redo this selection? ... Without hesitate, for 40 euros Tomanan definitely go for a minute Sananayser HD 212 Prol use it for two months. Light and flexible, sleep with the price of tl at times. The design is good. HD 212 Pro neferne not enough, I heard the sound collected external collection outdoor environment for a noise and I realized that when I could hear box m'entranais, others who had been in my ear. The report has quite a carpet-persa interest budget but it will be enough to take HD 202 (black) audio tape in their ears for long use is very difficult. Good headphone box or home for studio monitoring and s'entrainer mix, but a noise does perform in the World TRS unsatisfying. With low price (say 12 in less than 18 euros), I'll re-choose it. Sananajsir HD 212 ProJust got it the most. good quality detail. At least: too many boss, once again another person got together (or it takes a little to know how to play this in every detail!) The area is very plastic but good solid 45 euros! 45 euros is so good, but not enough... I try a model in different people without the quality price report/right if I was more Argentina Then I would choose for someone other. Globalman but satisfied. It looks good after many long hours of listening to headphones, but tj-caskal ears warm! 1h and y ha it to stop the Irearator, I have not given a small ear even smaller, it fits perfectly inside a foam but seriously time or I wrote my ear fire. 1 People could not find the helper table to review this from the band 100 Hz for 1 kg from AMP 0 Simon O'Ohm in Al Seemaania, 100 to 10 kg in DBA conversion from 10 kg to 10 autumn, in DBR, from AMP 20 Simon O'Ohm to Simon O'Ohm 10 kg, db from amp 50 Simon O'Ohm in DBA to ten autumn. 100 100 100 Simon Ohm Band 100 Hz in 10kg, DB in AMP 300 100 From Simon Ohm 1 kg to 10 autumn, dB not picture forColor: © 1996-2014, Amazon.com, Inc. Or its adjacent Sananajsir HD212 headphones are very light, silvery, designed for professional DJ or personal use of closed back headphones, offering good isolation, high SPL capacity, and detachable cups with replendoral-charmy ear connection. The HD212 headphones are specially designed for continuous and expanded boss response, deploying light-trembus and high-performance driver hotels in a particular damanpang material.
