With the release of Momentum True Wireless, the German audio icon has created an ear monitor with excellent sound and intelligent features designed to compete with Apple AirPods, and, well, everyone else. And while the final product isn't perfect, its simple audio best practices makes it worth a pretty price. Editor's note: On March 13, 2020, Sennheiser announced Momentum True Wireless 2. They are designed for longer battery life, and add a bunch of features that AirPods Pro has, such as active noise cancellation and transparent hearing mode. DesignSennheiser is as adept at design as it is in sound. Momentum True Wireless proves that by demonstrating prime skill from the kidneys to the charging case. Matte black plastic makes up most of the design, with a shiny embellished panel on the front with the company logo. It's not as fancy as the acetate and stainless steel used on the Master of the Dynamic MW07, but it maintains a clean and minimalist heritage design of the brand. IPx4 certification also protects the kidneys from spray damage. Momentum True Wireless demonstrates simple skill from the kidneys to the charging body. Prime Day Deals: See all the best deals right now! More tempting is the charging case, which resembles the Google Pixel 3 in a phone fabric case. The sleek grey fabric is exquisite and gives the package an elegant presence. I found it more travel-friendly than the MW07 charging case; a fingerprint magnet that is hefty to carry. Inside are magnetic stands that are easy to store and block buds in place to recharge on the go. Complex accessories are usually not enough for true wireless models, but Sennheiser presents a handful of them, including three different size ear tip and USB-C charging cable.Comfort and FitKnowing company's penchant for class-A circuitry and sturdy aesthetics, I was surprised at how light these headphones felt. They rested tightly on my end, not applying any unwanted pressure, and the tips of the ears provided a cozy, pleasant fit. Kidneys are listed at 0.2 ounces each. It's 0.1 ounces lighter than MW07 (0.3 ounces), but you won't notice the difference. The Sennheiser case hits the scale at 2 ounces, while the Masters and Dynamics case remains a more vognette version at 2.7 ounces. Manage and set up! really like control, especially when they support a few multiple and work well. Sennheiser meets me halfway. The touch control allows you to perform multiple commands, but the sensitive sensory response confuses them most of the time. Music control is reserved for the left earpiece, which functions as follows: play/pause (1x tap), track forward (2x taps) and track back (3x taps). The right earpiece for calls and a digital assistant. You can answer calls/end or turn on the digital assistant at the touch of a button. Two cranes will reject the call. Odily enough, the volume up/down is divided between two headphones, with a long press on the left (bottom volume) or right (volume increase) to adjust. Despite the controls that have an intermediate learning curve, the real problem is their lack of accuracy. Trying to pause a song often misses it, and trying to raise the volume will produce a digital assistant. The touch control allows you to perform multiple commands, but the sensitive sensory response confuses them most of the time. Connecting the headphones is easy. Touch both kidneys for 5 seconds until you hear the pairing hint. From there, access Bluetooth settings, select Momentum TW, and wait for the connection. I connected to my MacBook Pro quickly, but had problems with my Pixel 2XL and 3XL. The connection error warning fades every time on both screens. One workaround was to pair the devices through the Sennheiser Connect app. PerformanceThe Momentum True Wireless is the most sounding pair of true wireless headphones I've tested. It combines spacious sound with Bluetooth (aptX Low Latency) top codecs to offer an amazing listening experience on all compatible devices. Sennheiser engineered powerful 7mm drivers for these headphones, which shows up when listening to bass-heavy content. I was queuing up For Eric B. and Rakim Follow the Leader and was reverent at how well balanced the lows sounded. Most headphones emphasize the track's pulsating bass line and mute Rakim's vocals, but these buds allow them to breathe, creating a pleasant, warm sound. There was a slight distortion coming from MW07 and Jabra Elite 65t. Listening to Soundgarden's Black Hole Sun was intense as i could feel the pain in Chris Cornell's voice over sinister guitar riffs. The instrument-oriented Sonny Rollins Moritat (Mack the Knife) also provided a lot of depth - the symphonic frequencies that sounded throughout the track sounded clear and sharp. Momentum True Wireless is the most sounding pair of true wireless headphones I've tested. As for the sound, only A pair of headphones that give Momentum True Wireless a run for their money is MW07. The Master and Dynamic sound profile and ultra-bending 10mm drivers are commendable, but subtle differences in bass reaction and clarity give Sennheiser an edge. Elite 65t produces great sound, but not on on level of these other two models. The Sennheiser Smart Control AppSennheiser Smart Control is not loaded with multiple customization options, such as Jabra Sound or Jaybird MySound apps, but it's useful for setting the equalizer levels. You'll find some other great features that can be switched inside the app, such as Transparency Mode and Smart Pause, which will choke the kidneys when removed from the ear. The overall design of the app is clean and smooth, just like the headphones themselves, and easy to navigate. Noise InsulationMost true wireless headphones are not designed to block noise. Momentum True Wireless is an exception and it does it amazingly well. Ear tips do a great job of forming a tight seal, which is key to hushing up your surroundings. I walked through the intercom in the hallway of my apartment several times and didn't notice the delivery of people buzzing my door. When outside, random fire engine horns and police sirens were audible, but not loud enough to break my concentration while watching YouTube videos. ModeMore's transparency and more headphones featuring ambient listening modes - Sennheiser treats its own as a transparency mode. The function works decently well. This doesn't jeopardize the audio output, so you'll still enjoy the music by eavesdropping on strangers. But don't expect to hear someone shouting your name from the other side of the street. SupportSennheiser's two-microphone digital assistant technology is first-class and picks up the speech well enough to call Google Assistant or Siri (depending on your device) for hands-free commands. The launch of the digital assistant works just as smoothly as on the MW07, although both IEMs fluctuate in draft conditions. My other complaint against Momentum headphones is that it usually requires two to three attempts before the kidneys register the feature. But when it worked, Google Assistant answered my questions and opened the program without a hitch. The LifeSennheiser battery does not hide the fact that these buds have subpar battery life: Full charging supposedly provides 4 hours of playback. It's more like 3 to 3.5 hours, which puts it in the same company as MW07 (3.5 hours), but under AirPods (5 hours) and Elite 65t (5 hours). This is enough for two to three days of commuting, but not cross-country flight. The carrier case promises up to 12 extra hours of juice, but that pales in comparison to other cases such as Sol Republic Amps Air 2.0 (45-plus hours) and, again, AirPods (24 hours). Even with the USB-C charging, it still takes 90 minutes to fully power the kidneys. I also noticed the case overheated during training camp. Call quality and ConnectivityAs call headset, Momentum True Wireless is a step up from most competitors, was clear and complete. Microphones helped neutralize the noise by allowing callers to hear me clearly while strolling through busy streets. On the other hand, 5.0 was not as stable as we would like. The kidneys struggled to communicate with my smartphone, although they were instantly connected to my laptop. Another problem was the range. The stuttering has become noticeable around the 30-foot mark, which is standard performance for Bluetooth 4.2 devices, rather than the latest Bluetooth protocol. At \$300, Sennheiser Momentum True Wireless headphones are an expensive investment, but one that provides categories of leading sound and excellent call quality. The deep, wide sound scene is a little better than the MW07, creating a neutral listening environment to hear most of the details on the recording. However, unpolished controls and poor battery performance keep the headphones back from their full potential. Can you find other models with great comfort and performance for almost half the price? Yes. Elite 65t is our current favorite, listed at \$150. Just know that Sennheiser's sound quality is excellent and more useful, especially if you have money to splurge.
