speaker, cross-industry innovation expert & ideaDJ

Technical requirements presentations Ramon Vullings

This document gives an overview of the preferences of Ramon Vullings when he gives an interactive presentation, training or workshop.

Technology

Ramon will bring his own laptop (Apple MacBook), with an HDMI connection. He presents (mixes slides as ideaDJ) with his laptop on stage.

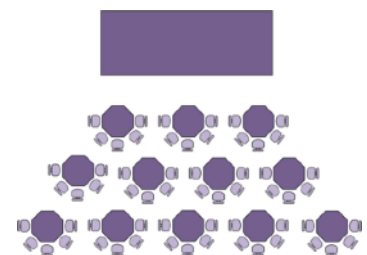

For the organiser to arrange:

- Wide-screen projection: preferably 16x9 or 16x10
- HDMI cable
- Audio in the room (for computer sound output) => if indicated
- Wireless 'Madonna' headset (I walk and move a lot on stage)
- Power plug
- Bottle of water + glass

Ramon will arrive way in advance to do a tech set up & check.

Room setup

Cabaret style (groups of tables) works best most of the time, although any room set up (i.e. theatre style) will work fine also.

Delegate materials

The handout of the presentation will be available afterwards via download. Ramon will send this link to the delegates who are interested in the slides or it will be send to the organiser who can distribute the digital handout of the slides after the presentation.
