

# WHY CHOOSE GASTRO DETECT?

Perfect adherence to current biopsy guidelines will still sample only **5% to 10%** of the BE surface mucosa, particularly in longer segments  
Iyer PG. *Gastrointest Endosc.* 2019.

**Improved Sampling**

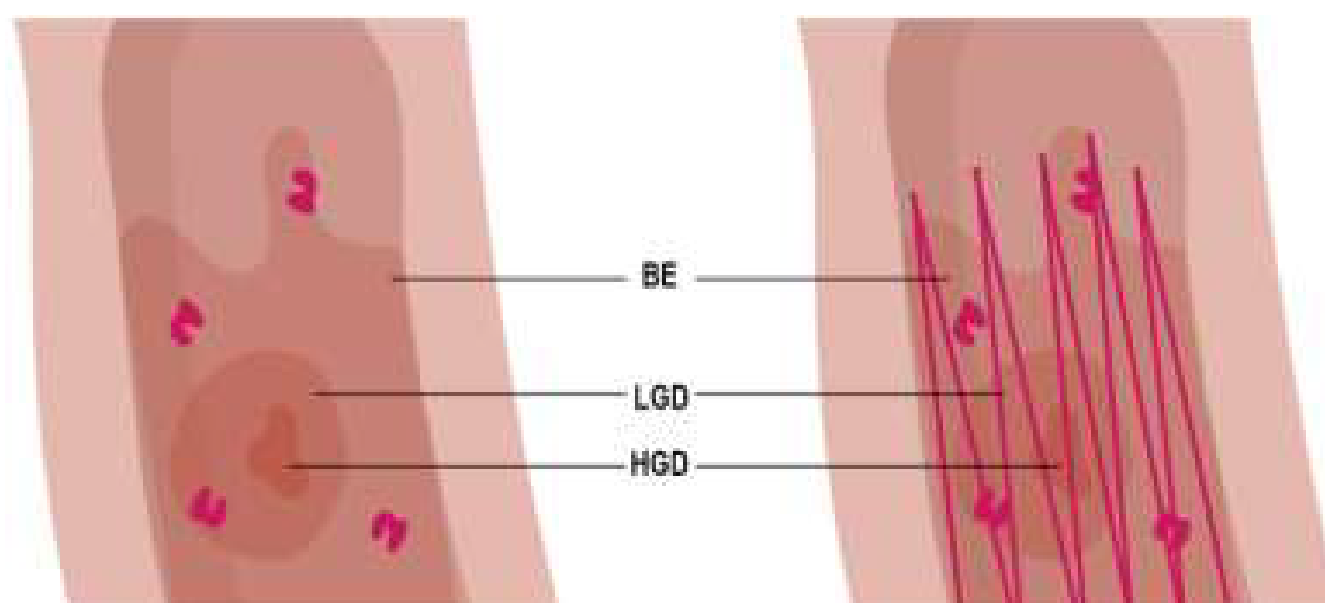

**Advanced Diagnostic Accuracy**

**Closing the gap Between Detection and Diagnosis**

## Forceps Biopsies

Sampling a smaller surface area increases the risk of missed detection

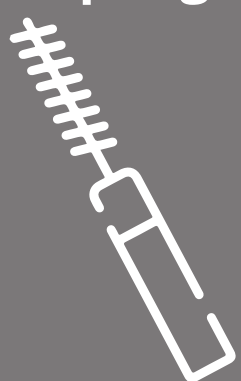

## Gastro Detect + Forceps Biopsies

Enables physicians to sample a larger area more effectively, improving diagnostic accuracy

## How does Gastro Detect Work?

**Enhanced Sampling**

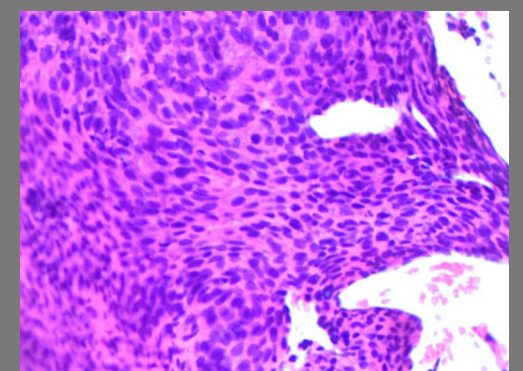

Brush captures a larger surface area during biopsy

**Expert Pathology Review**

All samples are analyzed by APS Fellowship-Trained GI pathologists, experts in detecting Barrett's esophagus and dysplasia

**Improved Detection**

Increased detection of Barrett's with a definitive diagnosis

## Boost Detection, Improve Outcomes.

When used alongside forceps biopsies, Gastro Detect significantly improves detection rates and provides a more definitive diagnosis.
