epub, and .mobi. Each book includes on-screen or eBook reader instructions. Description Designed for students in elementary and high school, this comprehensive, engaging text includes the latest research in the psychology of language, including neuropsychological and neurolinguistic foundations of language, the psychology of language and cognition, and the psychology of literacy. The author invites students to explore the cognitive, social, cultural, and neuropsychological factors that contribute to the way people think and communicate. Each chapter concludes with a summary, a study, and a summary-study. A large number of fascinating examples and experiments provide many opportunities for teaching and discussion. New research and experiments show how an understanding of the brain and cognition can be used to address individual and societal issues related to the acquisition, organization, and use of language. Table of Contents Preface to the Third Edition Foreword Acknowledgments Chapter 1: Preliminaries 1.1. What Is Language? 1.2. The Brain 1.3.
