There will always come a time when you have to convert one type of file into another and you probably want to do it as quickly and as cheaply as possible. Of course, if you work in an office and have to convert files every day, your company will probably purchase a commercial conversion application, and this is by far the best option. However, if you only need to convert files a couple of times a year and you don't want to drop \$50 on a program that just converts Word documents into PDF files, then you only have another option is to use free online conversion tools. These are basically sites that allow between different formats and usually free for small conversion projects. They make money trying to get you to sign up if you need to convert more files or large files etc. very good work, although they are not perfect. Even with expensive conversion software, you will always work in cases where the output conversion is not quite correct, and in these cases, you just have to try another service or edit the file to make it easier to convert. Samzar has been around since 2006, and even if they insist to get you to sign up for your monthly plans, the service still works well for free too. Of course, when things get busy for them, all conversions for free users get pushed in the back behind all paid users. Depending on the time and day you use the service, it can take anywhere from 2 minutes to 2 hours to get the converted files. When they first started out, they only supported a few dozen file conversion types, but now they can make more than 1,200 file conversions. This includes documents, audio, video, images, e-books and more. As I mentioned earlier, however, it is only useful for a small number of files relatively small size if you use a free service. To use it, just start filling out the section at the top. First, click Select Files and select the file you want to convert. Automatically falling in step 2 will populate the formats available for conversion. For Word Doc, these were my conversion options: Then just enter your email address and click on Convert. When the conversion is complete, you'll receive an email citing the converted files. Online-Convert.com Another good online conversion tool Online-Convert.com. Unlike zamzar, this site is absolutely free with no paid options at all. They mostly survive on donations and advertising revenue it seems. Technically, there doesn't seem to be a limit on the number of files that you can convert, but I'm sure there are some covers at the point. Anyway, the main page is broken into sections such as audio, video, image, document, etc. Go ahead and click drop down and choose the format you want to convert your files and click Go. Then click Select Files and select the files you want to convert. The good thing about this site is that it also allows you to choose from your Dropbox account if you want, and it has some extra settings to use OCR and even the ability to choose a different language for the source file, although your mileage will be very different. Another good feature is that you don't have to enter any email address or any personal information! Just click the Envelope file and it will convert instantly and download directly to your computer. Don't wait! After that, gives you a whole host of other options in case you want to do something else with the file: These are two sites that I've used and have had good results in terms of speed and conversion quality. You can also download conversion software, but it's almost impossible to find a free program that can handle so many types of conversions. If you need to convert video files, you have many more free options like awesome HandBrake. When it comes to document conversions, these free options just don't exist. If you're aware of a free program that's good for converting documents, let us know in the comments. Enjoy!
