put key.txt on my nexus 7 how i compile that for ubuntu 10.04? ablest1980: sudo apt-get install build-essential may help
ablest1980: On Ubuntu, apt-get source is the way to go ablest1980: Note that it will download all the source, and put it in your
current directory ablest1980: (this will create the.orig directory if it doesn't exist) ok cool thanks hi guys i'm having problems
with booting ubuntu. When I boot it gets stuck on 'acpi: BIOS date incorrect' then it throws me to grub Guest50135, What are
you using to boot? any clue what I should do? trying to boot from a usb can't seem to boot from any usb Guest50135: You sure
the BIOS is set to boot from USB? ablest1980: That's a pretty old PPA to be honest. It's on the verge of failing, maybe use the
regular Ubuntu repo for now. ok ablest1980: Also note that the version of kismet in the Ubuntu repos is already fully patched
for russian ablest1980: i think i need the source anyway ablest1980: "sudo apt-get install kismet" should get the source and all
dependencies !find kismet Found: libkismet-kde4, libkismet-dbg, libkismet0, libkismet0-dbg, kismet-common bazhang: Thanks
for the quick help :D Guest50135, I 520fdb1ae7
