I can't find anything online on it. All I see is for the newer TVs. One of the cool features offered by Vizio's line of smart TVs is the built-in Chromecast device. Chromecast is, of course, the Google streaming media card that lets you play video and music via streaming services live on your TV. The various channels, including music and games, are organized into apps on Vizio TV. Since these apps are software-based and run on the integrated Chromecast processor, it's important to keep your apps up to date. In this article, I will show you how to keep your apps up to date on your Vizio smart TV. Updating apps on Vizio depends on the tv's team and model. More on that below. Read the article for more information There have been several generations of Vizio smart TVs, and the procedures for updating the apps are different for the different generations. However, there are basically two categories of TVs: there are the older VIA and VIA Plus models, and there are the newer models (including the P Series and M Series) with SmartCast. I will walk you through updating the apps for both tv categories. Update apps on a Vizio VIA or VIA Plus TV The original system to add apps to Vizio smart TVs was called WIP, which stood for Vizio Internet Apps. To update apps on these models, you'll need to do it manually. This requires you to remove and reinstall the WIP app or perform a firmware update (which does the same). If you just want to update your apps, remove and then reinstall each app: Press the V or VIA button on the remote control. Select the app you want to update and select the yellow button on the remote control. If you see Update, hit it. If you don't, select Delete app, and then select OK. Confirm your purchase highlighting option Yes and press OK. Navigate to the App Store using the remote control. Select the app you want to update or reinstall, and select OK. Select install and let the process complete. Vizio uses the Yahoo platform to host these apps, so you'll see the Yahoo Connected Store when you choose them. To manually upgrade the firmware, you need a USB drive and around fifteen minutes. Turn on the TV, navigate to Settings and System to check the firmware version number under Version. Download the latest firmware for your TV model from the Vizio support site. Select Support and enter the TV model number to get the correct firmware. Compare it with the version listed on your TV and continue if the installed version is older. Rename the file you downloaded to 'fwsu.img.' This allows the TV to recognize it as a firmware image file. Copy the file to the USB drive. Turn off the TV and insert the USB drive into the TV. Turn on the TV. You should see a blue light on your TV telling you that it has picked up the USB and firmware image file. When the blue light goes out, turn off the TV and remove the USB drive. Turn on the TV, navigate to Settings and System to check the firmware version number under Version to make sure you're running the latest firmware. Update apps on a newer Vizio TV Subsequent generation of Vizio TVs use SmartCast TVs, which is a version of Chromecast. Chromecast lets you use an app on your phone to cast content directly to your TV. These newer models don't require you to update your apps manually, automatically updates themselves when you are not using the TV. These models also update the firmware periodically, but you can do this manually yourself if you want. Vizio TVs equipped with SmartCast do much shorter work with updates. As long as you're already connected to Wi-Fi, it should take only a few seconds to manually update your TV. Turn on the TV. With the remote control, select Menu, and then select Settings. Select and Check for Updates. Confirm any updates if found. Du skal se en en indikator that shows how far along the update process is. Allow the TV to update itself without interference, and the TV restarts itself and loads the latest firmware. You should now be able to open SmartCast TV and see any new apps or features released with the update. How do I update my Hulu app on Vizio TV? Many of you may have noticed that Hulu won't work on your TV anymore, and Vizio has addressed this issue on their website: Some older VIZIO VIA devices will no longer be able to stream Hulu Plus. This is due to an upgrade Hulu performed to the Hulu Plus app. This affects multiple devices across almost all electronic manufacturers. There is no problem with VIZIO TV, or with Hulu Plus. Hulu Plus will simply no longer work on the TVs listed below. If your TV is part of any of the models on their website, you will no longer be able to watch Hulu. How do I set up Amazon Prime on My Vizio TV? It's easy to set up Amazon Prime on Vizio because the extension is right on the TV itself. Follow the direction below to sign in to your Amazon Prime app. On vizio Smart TV's Home screen, find the Amazon Prime Video app. It should already be installed. Click on the Amazon Prime Video app and log in with your username and password. Enjoy Amazon Prime Video! TechJunkie has many other tutorials to help you get the most out of Vizio TV. If you need to restart with the TV, we have a tutorial on how to reset Vizio TV. Don't you hear anything on the TV? Check out our how-to on solving problems with audio on Vizio TV. Do you have a Firestick? We can show you how to use your Fire TV stick with Vizio. Just need a firmware update? Read our piece on how to update firmware on Vizio. One of the cool things about Vizio is that you can control them with a smartphone app. You're not limited to the official Vizio app, though - check out our article about the best Android external apps for your TV. Do you have any other tips or techniques

to get the most out of Vizio TV? Share them with us in the comments below! If you haven't updated Your Vizio SmartCast TV in recent months (or ever), you'll definitely miss it. Waiting to update your TV firmware will leave you out of the loop on several new features for your TV, ranging from better image quality to extended compatibility with smart home devices. Think of it as a free upgrade that will give you a better, more capable TV after just a few minutes of work. Vizio's SmartCast TVs have received several updates in the past year, adding more streaming options, HDR support and skills for Amazon Alexa. Recently announced updates provide more functionality to Vizio's SmartCast TVs, adding support for local app and expanding features to include things like Google and integration of smart speaker. Updating your SmartCast SmartCast takes only a few minutes. So take your remote control and watch to get your outdated TV up to date back to speed. Although we show the steps taken to update a Vizio SmartCast E50-E1, the same steps should apply to most Vizio 4K TVs from 2016 and 2017.1. Turn on the TV. Start by turning on the TV. There is a good chance that you will be prompted to check for and install updates right away. In this case, follow the on-screen instructions to complete the update. If you are not prompted to update right away, follow the instructions below to review the process of finding and installing the required firmware updates.2. Connect to Wi-Fi.If you still haven't received Vizio automatic updates yet, chances are, that's because you don't have the set connected to the Internet. To connect to your home network, press the menu button to go to the TV main menu and navigate down to the Network option. The Network Settings menu allows you to select your Wi-Fi network or connect via Ethernet, and then you will ask you to enter your network password. After you're signed in to your home network, test your connection to make sure there are no additional connectivity issues that can prevent a simple update. After network problems are resolved and you are connected, return to the main menu to start the update process. MORE: What is HLG HDR? Navigate down to the System menu from the main menu. In the System menu, you have two relevant options: Check for system updates and System Information.To jump right to install the latest update, select the first option and jump down to step 5. For a little more information before installing anything, proceed to step 4.4. Check the version number. If you're not sure which version of the operating system you're running, check this in the System Information menu. Just below the model name you will see an important bit of information, labeled Version, which refers to the firmware version installed on the TV. From the beginning of February 2018, the latest version is 3.4.8.15. If your kit has a version earlier than that, you should manually check for an update. If you're ready to push the latest version of the software to SmartCast TV, simply select the top option under the System menu, the Check for Updates check box. After you select this option, you'll receive a message on the screen asking you to confirm that you want to check for updates. Once confirmed, the system will start downloading the latest version of the software. A message on the screen shows you the version number of both the installed software and the download update. This should match the information displayed in step 4.Once the update is downloaded, the TV will restart for start installing the update. You will also get a splash screen that shows you Progress. When this step is finished, the TV restarts. You will also receive a message telling you that the update is installed and mentions some of the new features that are enabled on SmartCast TV. Press the Play/Pause button on the remote control for more information, or another button to close the message and experience the newly updated TV. MORE: Internet throttling: What is it and what you can do about it7. Enjoy your new features. With the latest software installed, you will be able to enjoy all the new features Vizio has added to their SmartCast TVs. Some of these will be obvious, such as the addition of local apps and content recommendations. Other features may not be so easy to see. Once in doubt, you can find the version number of your update and search for details about the update on the Vizio website. Credit: Tom's Guide
