Photo: FortniteThere many parental handshake over the phenomenon, which Fortnite. It's not just a social survival game that kids can play for free with a plethora of devices (computer, mobile phone, PlayStation, Xbox or Nintendo Switch). Fortnite: Battle Royale also gets a reputation for a few use (depending on who you ask). But maybe we're thinking about it wrong. What we see as shoot-em-up games that teens and teens play obsessively online for hours on end, so rotting their brains, they can just see how to hang out with friends. At least that's the writer Owen Williams take: We get to the game, but we really just hang out. Fortnite has a built-in voice chat, so it's seamless just to jump on talk about the day, the life that's going on without even realizing it. We play the game together, falling out of the battle bus every ten minutes to start a new new but what keeps us there is that we all spend time together. I've probably spent more time talking to my friends on the other side of the world in Fortnite voice chat than I've called them in the last four years since I moved abroad. Even for friends who live nearby, in the same city, we catch up much more often through the game, popping on for a quick few rounds and talking about what's new at the same time. And Williams isn't the only one who thinks that the inherent value in Fortnite is the ability to regularly communicate with friends. His piece on the Tech Charged blog was inspired by this tweet from @anoopjournalist Keith Stewart also wrote on Medium about the benefits he sees in social interaction for himself and his sons. And he points out that hanging out through video games is a natural consequence of helicopter parenting times: People who don't play Fortnite, or video games in general, often say it's sad that modern teens aren't going to skateparks and roller discos, and that they get these formative experiences online instead. In a way, I think it is, but the kids aren't necessarily to blame here. Teenagers are caught up in the crappy sociocultural Catch-22: Adults worry that their kids are spending too much time on smartphones and consoles, but at the same time they are constantly policing and restricting access to physical environments. Our advice? Before deciding whether Fortnite has true social value or is just another way to turn a person into a zombie-obsessed game, try playing it with your kids. Fortnite for Android has been for a while now. So is the iOS hardware version. However, in August Epic launched a new direct payment system within iOS and Android apps. This is a serious violation of Apple and Google's policies, which require app developers to give up 30% of the revenue from apps or games that use their respective app stores.
