

Rubber band machine gun plans

I'm not robot

Continue

Looking to make a playtime target with a few bullet bullets but can't quite get away fast enough? Design company Gun T-Rex is out to provide some rapid-fire capabilities to these domestic conflicts, with a motorized rubber band ay based on a Gatling machine gun. The T-Rex gun is far from the first to produce a wooden ay gun to bring some precision and realism to childhood (or adulthood) rubber band warfare. From versions based on guns to others inspired by Tommy guns and even sniper rifles, there are plenty of options to keep rubber batting off through one living room or office. The Minigun rubber band bears a resemblance to the Machine Gun we looked at back in 2013 from XYZbot. The Gun T-Rex version doesn't quite offer the same shooting speed (that one could start 800 rounds per minute), but is a very capable machine all the same. Rubber band Minigun in action Made of wooden CNC-machined pieces, minigun rubber band is 12 kegs can be hand loaded with 144 rubber bands. From there, the electric motors turn the drum with the pull of the trigger, while the separate release trigger then fires from rubber bands at a rate of 200 rounds per minute. This means that the drum can be turned on its own, without firing rubber bands, in order to instill fear in its opponents. The Minigun rubber band is available as a fully assembled gaming weapon, or as a DIY kit that comes with 70 separate pieces that can be put together in a couple of hours without glue or soldering. It is available in wood or maybe a more intimidating black paint work. Currently the subject of the Kickstarter campaign, the T-Rex gun offers its Rubber Tape Minigun for early promises of US\$94 Currently the subject of the Kickstarter campaign, the T-Rex gun offers its Rubber Tape Minigun for early promises of US\$94, which arrives as a DIY kit, or a fully assembled version for \$99. The black version starts at \$114, while shipping is slated for February next year if all goes to plan. You can check out the playground video below.
