download in most cases. To solve this problem, you need to have a reliable video compressor; Fortunately there are many free video compression tools that can do the job. As the name implies, the video compressor crushes the file to make it smaller, allowing you to download and download speeds faster. Basically, once you've compressed the video, you'll be able to send and receive files more easily. There are countless tools to reduce the size of the video file on the market, usually woven into general video conversion and editing software. We sifted through these programs to find the best, from powerful desktop apps to fast and easy online video compressors. The best standalone video compressors 1. HandBrake Of all the free software that can compress videos, both online and how to download, HandBrake is probably the most famous. It's a solid favorite among video editors. It's easy to use and even has pre-installed video conversion and compression settings. For example, you can choose the type of device (Android, iOS, etc.) and video concert tools and converters are automatically installed to work for this hardware. These presets are perfectly positioned on the right sidebar, where you can also find web and common presets. When you open a new video compression source, HandBrake allows you to choose between one file and a multiple-code queue package. Other important features of the video compressor include subtitles and support for CFR and VFR. HandBrake also works as an excellent video converter, supporting multiple video formats with multiple settings such as FPS and codecs. It is open source software to reduce the size of the video file that is available on Windows, Mac and Linux, but as a free software it is hardly what we would call a modern design. Functional yes, but not really an aesthetically appealing program. OS: Windows, Mac, Linux Licensing: Open Source Our Rating: 9/10 Pros Cons Multifunctional Video Compression and Conversion Tools easy to access presets for Fast Batch devices in the Fast Batch queue of Slightly archaic (albeit functional) design 2. Format Factory Format Factory is another open source video compressor with a built-in conversion set that we strongly recommend. This is one of the most fully downloaded video software on the market, so you should be able to a format that suits you. Available file types include MPG, MP4, MP3, AVI, FLV, WAV and more. It's a very easy-to-use video compressor, while the feature set is solid and includes codec selection, FPS, resolution and size. Even beginners who don't want a granular setting will be able to just pick up the pick up Plant and use it. Although the number of presets is not as extensive as HandBrake, format factory has easy-to-understand output buttons that make the program easy to use. One thing we really don't like is that the factory download format made us download opera web browser. We didn't want it, and although there was an option to cull, we couldn't. Perhaps it was a one-off problem while using the program to reduce the size of the video file as the option is there is no download browser. OS: Windows, Mac, Linux Licensing: Open Source Our Rating: 9/10 Pros Cons Nice User Experience Excellent Support format Easy to use for Beginners Granular Options for Pros Some Conversion failed Unfortunate Product Placement Installation 3. Avidemux Far more than the Video Compressor Avidemux is a fantastic multi-market video editor who is great for rapid reduction and conversion. The free service is primarily designed for cutting and encoding videos, so the support of formats is extensive. One of the best features is the ability to automate tasks and project queues. The avidemux design is spartan, which can put some users. Despite its sparse design, the video-face compressor is very different and actually very easy to use. Among the tools of file editing are frame rate, bit speed, codec, and compression tools. We recommend Avidemux to users who want to get reliable video editing done along with their video files compressed or converted. OS: Windows, Mac, Linux Licensing: Freeware Our Rating: 8/10 Pros Cons Strong Video Editing features Great for quick reduction and edits Good Support format Best Online Video Compressors 1. Deputy if you need to compress the video file online very quickly and conversion will be a good addition for this, Zamzar is a great alternative to the desktop program as it works directly in the web browser. Of course, this means that you will need an internet connection to use an online video compressor. We like how simple and effective zamzar is. When you first visit the site, you'll be presented with a basic list of tools, starting with downloading the file. Once you download the file, the online video compression service will give you the ability to convert the file into a format supported by thousands. Because it works on the Internet, you use the company's own servers and don't rely on your own computing power. It allows the speed of this free video compressor to be impressive, making it a good choice if you have multiple videos to compress. Of course, the online tool will come with some caveats. In addition to the already mentioned connection dependency, just lacks the many pro-level tools and features found on the desktop program. It's more suited to quick video compression online where you don't need to be too nuanced with the control function. OS: Web Licensing: Free Our Rating: 8/10 Plus vs. Easy Easy Convenient quick video compression and conversion speed Good for multiple compressions No need for downloads you need an internet connection Missing some features compared to the full desktop app 2. CloudConvert Another online video compressor, CloudConvert is probably the easiest way to compress video online on this list. The web tool uses a simple drag and fall interface to create an intuitive path to post videos for conversion or compression. Like Samzar, the big advantage here is that you won't need to download any program and can just go straight into the compression of the video files. By downloading the file, allow CloudConvert software to do all the hard work in the cloud, saving the system's resources in the process. We were impressed to see a party conversion tool that is not a common feature on the internet. Compared to some desktop programs, there are no 206 supported file formats. However, it should still be enough to serve most users for a quick conversion or compression of video on the web. Like its online competitor, CloudConvert relies on an internet connection to function. It is also the only service on our list with a premium paywall. The free CloudConvert service gives you 25 minutes of maximum conversion time. In addition, customers can pay \$8 for 500 minutes or \$8 per month for a subscription with a 1000 minute conversion. OS: Web Licensing: Online freemium with premium paywall (\$8 per month) Our rating: 7/10 Pros Of The Conversion Package Fast Online Video Compression Internet Connection needs a free version limited to 25 minutes conversion technology has advanced enough that sending files and information is now relatively easy. The Internet connection is ablaze quickly and data can be sent quickly, even on mobile devices. However, video files remain too large and often difficult to send because of their size. The video compressor tools we've listed are the best way to reduce file size and send more videos quickly and easily. If you're looking for a way to reduce the length of the video, check out our guide on how to crop the video to learn how to cut out additional parts of the video. 2020-09-09 17:48:46 - Filed: How-To and Proven Solutions If you want to reduce the size of the PDF file, you can always try to optimize it. But in this way, you have no control over what the software does to reduce the file size. So, what's the alternative? You can try to reduce the size of the PDF manually. All you have to do is change the font size and style, reduce the images, and remove some unnecessary pages. Today we will help you get over the PDF file and reduce its size. How to reduce the size of the PDF Manual For this purpose, we will use one of the best PDF editors on the market, PDFelement. Powerful, multi-commutable and affordable, this tool makes things simple and easy. We'll discuss all the software features later. Later. Now let's see how you can use the software to reduce the size of the PDF file manually. Step 1: Remove unwanted texts manually Start by removing unwanted text and reducing font size. Click the Change icon on the Change tab, which means Edit text and image objects. There are two options: line mode and paragraph. The first one allows you to edit the text line by line. And the second one is all over the paragraph. Remove unwanted text. Step 2: Change or delete images or objects It's time to turn to images. Click the right button on any image in the PDF and click the Delete button to reduce its size manually. You can also edit other aspects of the image to reduce the size of the PDF manually. Step 3: Delete unwanted pages manually for the third part, you need to take a look at the pages in the PDF. Do you all need them? Or you can delete some of them. To remove pages from the document, go to the Page section and click on the Garbage Delete page icon. A pop-up will give you several options, including deleting pages in the range, removing odd numbers, even numbers, or both. Step 4: Reduce the size of the PDF file manually last, but last but not least, you can compress the size of the PDF file manually. This step will need the file by optimizing it. Go to file, and from the drop out of the menu select Optimization. Choose optimization, low, medium or high. When you choose, the software will tell you about the new size. Note that if you choose a tall one, the new file will be larger in size. We mentioned that PDFelement is one of the best tools to use to compress the size of a PDF by hand. What makes this software great is the simplicity and features. With an intuitive and familiar user interface, this tool will help you solve all your problems. There is no learning curve. Just run the program and you'll see how easy it is to use it. The software comes with features, everything you need to organize and edit PDF documents. And with a price that is lower than the competition. Here's a quick list of some features. Optimize and convert pdf files with one click. Add, delete, rotate and want to have graphic items in the document. Edit the text, delete the text, and change the style and size of the font. Insert a header and footman, page numbers or bat number. Remove data from the document and export it in Excel format. Automatic pattern field recognition and new interactive shape fields with a single click. Create a digital signature and sign documents. Protect your documents by encrypting your passwords. Follow OCR to turn scanned images and documents into that can be searched and edited. A package process to convert many PDF files together. As you reduce the size of the PDF Manually online for free We have said previously that there are many tools that you can use to reduce the size of the PDF file manually. If you don't want to download software for a simple task, you can try online tools. Let's discuss how to reduce the size of the PDF manually online. Recommended A great tool with a simple and easy-to-use design. You can use it to optimize and compress PDF documents or manually delete text and images. To compress the PDF, go to the hipdf compression page and download your document there. Choose the type of compression you want. Options are low (less compression, high quality), medium (good compression, good quality) and high (high compression, lower quality). Another way to reduce the size of a PDF online is to manually remove text, images and other unnecessary aspects using an editing tool. Go to the hipdf PDF editor's website and download the document. And then delete text, images, or anything else you don't need. Free download or buy PDFelement right now! Free download or buy PDFelement right now! Buy PDFelement right now!
