REVIVE

TAP FLOW REGULATOR SYSTEM

H2OiQ REVIVE Tap Flow Regulator System implements a quarterly replacement, clean & recycling system. This system provides 'off site cleaned' flow regulators delivered each quarter as replacements whilst collecting the old units for cleaning or recycling. This guarantees 'complete cleaning' and negates the time consuming process of cleaning flow regulators on site.

INTRODUCING THE REVIVE RANGE:

1. New quarterly specific colour coded Tap Flow Regulators delivered to site
2. Old coloured Tap Flow Regulators removed & packed in returns boxes
3. New colour Tap Flow Regulators fitted by maintenance staff quarterly
4. Pick up of previous quarter's old colour Tap Flow Regulators
5. Tap Flow Regulators cleaned thoroughly off site or recycled

- + Improved safety & infection control
- + 1.2 or 1.9 litres per minute options
- + Huge water savings
- + Cheaper than cleaning on site and guaranteed to be cleaned
- + Quicker than cleaning on site
- + Reduced management requirement
- + Reduced demand on your maintenance staff
- + Simple auditing & compliance management
- + Exceeding HTM 04-01 & L8
- + Cheaper than you think

Reduce the risk of
legionella, limescale
and biofilm build up

New HTM 04-01 & L8 compliance is a necessary but expensive, time consuming drain on management time & maintenance resources.
