Symantec endpoint protection manager update client install package

The last SEP upgrade I had to make sure that the control machine was updated first. Matt should be able to direct you to some papers about it too. If it was me, I would plan to keep the DB with the rest of the installation and try not to distribute it through other systems specifically if you are p2v'ing this system. Hello, you are a very old version of SEP, SEP RTM was the first edition of the 12.1 platform. Many new improvements were made from 12.1 to 12.1 RU5. Can be checked here: ... As you know SEP 12.1 RU5 is the latest version, here you can see the upgrade review guide: ... Track best practices for updating or transitioning to Symantec Endpoint Protection 12.1.5 (RU5) & Here is the latest best practice article SEP 12.1 RU5 (12.1.5337.5000) Before you start upgrading you must take the necessary backups as Plan B to perform disaster recovery failed. To take recommended backups, follow the following article: Before you start upgrading go through system requirements: Here is a list of articles on how to move a SQL database. The Best Practices Guide to migrating Symantec Endpoint Protection Manager SQL Server databases from one drive to another on the same computer best practice guide to migrate symantec endpoint protection manager SQL Server databases from an existing SQL Server database to a new SQL Server database several issues were reported after upgrading to 12.1 RU5, but it is not necessary for them to also occur in your environment. However, test multiple clients before installing the update across the network. Known issues with SEP 12.1 RU5: When Symantec Endpoint Protection 12.1 RU5 is installed the operating system is running in a VMware virtual environment, several issues encountered when editing the scan type of an existing folder exception in SEP 12.1 RU5 does not save correctly installation of Symantec Endpoint Protection 12.1 RU5 fails with error 3-PAR signature error, does not work in 3-PAR replication fails after you upgrade to SEPM 12.1 RU5 Seydon ... You are in great hands with Chetan. If you have any questions, please feel free to hit up any of our Green Guys. Bill... Thanks for the shoutout here, I didn't get a message about this one. Thanks. I will definitely use all that documentation and my experience in this the current installation was done before I started here, and in fact I haven't had much experience with symantec product before. At this point I am in the planning/research phase and then, it will be time to implement ... I'm still in the planning phase of this project (I've side-watched other projects, and now I'm back to this) ... From my understanding, installing the update will also include updated customers. At the moment, installation we only have English language packs. Since I also manage the endpoints located in Quebec, I need to have French available. Can I also download client packages in French and add them as installation packages on the server? Don't they mind each other? Will we be able to choose which language we want to push into a new customer? When you install the update, it will also update customers. Go to SEPM --> Administrator --> Install packages, all the latest client packages will be available. Q.Can I also download the french version of the client packages and add them as installation packages in the server? Don't they mind each other? Will we be able to choose which language we want to push into a new customer? --> Since importing symantec endpoint protection (SEP) client install packages in Spanish, English and French in symantec Endpoint Protection Manager Console (SEPM), it is impossible to select the language to install from the SEPM Installation Wizard menu. The problem is that no automatic detection is performed to obtain the operating system language and SEP clients are deployed in the wrong language. An attachment query was opened for this issue: ... Workaround: An export package is available in the correct language and installed it later through the Installation Wizard (install the existing package). However, to select the language that we are going to install, the wizard should have a menu. That this improvement improvement request is listed as related above. See this article for details: Edited December 6, 2014 at 08:44 utc Thank you all for your contribution. My server is now running RU5 and I am in the process of updating my endpoint clients. So far, everything seems to work flawlessly. Article ID: Status 151276: Published update: 10-07-2019 11:39 Legacy ID: TECH102215 Products: Endpoint Protection Issue/Introduction: This article describes how to create new client installation packages using the Symantec Endpoint Protection Manager (SEPM) console. Workaround: To create a new package for SEPM, click the Administrator tab on the left. In the lower center, select the Install packages button. Under Tasks, click Add client installation package. Specify the name you would like to have in the package. Click Browse. Navigate to the original installation media to \SEPM\PACKAGES. Select SAV32.info or SAV64.info. Click Open. On the Add new software package screen, click OK. To export a new package to SEPM, click the Admin tab on the left. Under Client Installation Package, right-click the desired package. Click Export. Click Browse, and then select the folder where the EXE file should be inserted. Click OK Note: You can keep all items as the default or choose the options that you want. Click OK. article ID: 152096 Status: Published Updated: 24-08-2020 07:38 Legacy ID: TECH122824 Products: Endpoint Protection Resolution: Import Symantec Endpoint Protection (SEP) Client Package into Guide: Connect to SEPM Console select the Administrator tab to select Install Packages. On the Task menu, click Add Client Installation Pack. In the Add Client Installation Package: Provide a descriptive name for the installation package in the Specify a name for this package (that is, Symantec Endpoint Protection 12.1 RU5 for Mac Client) box, click Browse. Go to the installation package folder (that is, SEPM\Packages\ from the installation media in Part 1) Select the .info file associated with the installation package (that is, SAV32.info, SAV64.info SEP_MAC.info) Click Select. Optionally, in the Description field, provide a description of the package. Click OK to start the import process. After successful import, a status window will appear. Click Close to exit the Create Batch dialog box. After the successful import, the Package generated event will be logged into the system/administration logs. Details will be described in this new package with text similar to the Successfully Imported SEP 12.1 RU5 32-bit package through Symantec Endpoint Protection Manager. This package is now available for installation. Notes: This process will not work with the SEPM web console. It can only import packages that have been exported to . ZIP file format. It will not import the .INFO file format package, it is not supported in the Web Console. The Web Console can import or export only one file. An executable package (that is EXE or . ZIP file packages) directly, but this is not recommended. The .INFO file contains additional information that describes the package and ensures proper migration to future builds of the SEP client through delta updates. Thank you for using our services. We are a non-profit group that runs this service so that we can share documents together. We need your help to maintain and improve this site. For our website to work, we need your help to cover the cost of our server (about $500/m), a small donation a lot for us. Please help us share your services with your friends. Resolution: Download Symantec software and tools You can download the latest Symantec software and tools, get license keys and activate your product broadcom help portal. Customers with a support agreement on broadcom support portal go to the Broadcom Download Center. Sign in with your myBroadcom account.
