Drain the ocean video guide answers

Edit More Edit In this National Geographic special, we're looking at what most call the Last Frontier. Using the latest data collected by scientists from around the world and the latest advances in computer imaging, we can explore some of the most dramatic landscapes the Earth has to offer. From the highest mountain to the cracks that would cover entire countries, the ocean floor is truly a sight to behold. Author: Serberus Plot Summary Ocean ocean floor Tsunami satellite image View all (37) Certificate: See all the Certificates Parents' Guide: Add content recommendations for parents Edit first lines Avery Brooks - narrator: An alien world of landscapes, the existence of which you never dreamed of: vast mountain ranges, endless plains, stormy volcanoes. But it is not an alien planet; it's our own world. These are the landscapes of the ocean floor, usually covered with kilometers of water. But around the world, scientists map the seabed, collect data and build a picture of the area below the surface. We have combined the latest scientific data with specially designed computer animation software for ...
