Choose a large rectangular Teakhaus cutting board, which is the right size for larger chopping projects such as meat carving. Its sturdy wood is certified by the FSC and sources from sustainable teak plantations. The board is heavy and large, so despite the built-in handles, reviewers say it's easier to leave it on the counter rather than trying to store it between uses. But with the boards that's beautiful, you can't mind having it on display. Amazon's rave review: This is still one of my favorite kitchen purchases. It still works beautifully. No deformation or cracking, despite daily use. It was pretty easy to maintain - weekly oiling kept it looking great. Cleaning up can be a bit of a challenge, given its weight, which is absolutely not a deal breaker, just be aware when you buy it. All in all, a fantastic product! Bustle can get a portion of the sales from products purchased from this article, which was created independently of Bustle's editorial and sales departments. Wooden cutting boards may look good on your kitchen counter, but plastics have serious advantages - they are lighter and more compact, easier to store, crack resistant, and don't require any flushing or maintenance. But you don't want to buy just any old cutting board. To find the very best plastic cutting boards, there are a number of factors to keep in mind. First, think about materials and weight. While most plastic is usually lighter than wood, some boards are heavier than others. Look for options like polypropylene or polyethylene, both of which are durable but still light. In addition, these materials are good at withstanding a lot of chopping and dicing without getting nicked up or full of marks. Another great thing to consider is the clutch. If your chopping board can't grip the counter properly, it will slide all over the place, which is not only super annoying, but potentially dangerous, too. So look for an option with a solid grip, and if you're concerned whether or not it will stay in place, choose a stripped board with specially designed handles (hint, hint: there's one below). To help you find the perfect stripped board for your kitchen, I did some research. Here are the best plastic cutting boards in different styles and price points. OXO Good Grips Cutting and Carving BoardAmazonThis popular partition board is durable, The smell is completely spot-resistant and has over 500 reviews on Amazon. It has a thick and durable polypropylene with smooth sides that are easily easy The cutting surface measures 14.5 by 21 inches, and the non-slip edges keep it from sliding around. And because you can use both sides, this one board is perfect for preventing cross-contamination between meat and vegetables. The surface is sleek and non-porous with fully dishwasher-safe material. I love this partition board,' said one lucky Amazon user. It doesn't slide around or bounce while using. It's very durable, gentle on my knives, and easy to clean. 2 Best With Extra GripsArchitec Original Gripper Cutting BoardAmazonDesigned with a cool patented capture system, this unique stripped-down board boasts more than 300 tiny feet that squishy still firm, offering extra grip on the kitchen counter so it doesn't slide all over the place. The cutting space is strong and sturdy with a large surface area (5 by 7 inches, 8 by 12 inches, and 11 by 14 inches all available options) for enough room to cut. The board itself is light and light in a dishwasher-safe material that comes in eight color choices. Love this product, said one Amazon user. The bottom is super tenacious for a non-slide board. ... Suitable in the dishwasher on the sides of the basket without hanging the tube when sliding in and out. It's a replacement for the same product that lasted eight years. If you prefer to have a selection of cutting boards of different sizes, this handy multi-pack has three boards in small, medium and larger sizes for just \$17. All of them are completely reversible with comfortable hanging handles and solid exciting features. They are thicker than a lot of cutting boards, which makes them a little heavier, but also stronger and more stable than the average board. They also have deep juice grooves to prevent side effects and completely dishwasher safe. These cutting boards are very nice and well priced, said one satisfied customer. They don't really slip and wash well in the dishwasher. ... I have used and washed them every at least 10 times or more by now and they also hold good knife marks. With over 750 Amazon reviews, this popular multi-pack comes with three thin, bendable cutting mats you can roll or slide into small boxes, all for as little as \$6. All three boards are the same size, and measure 12 by 15 inches. The material is 100 percent BPA-free with antimicrobial properties that keep them odorless and safe from any germ build-up. The flexible design allows you to bend them when you've done chopping funnel food into a bowl or pan. Smooth cutting sheets are also colored, so you can assign some of them to meat and other vegetables or other uses, preventing cross-contamination. Bustle can get a portion of the sales from products purchased this article, which was created independently of Bustle's editorial and sales departments. Market research company NPD says U.S. consumers still don't buy 3DTVs, 3DTV's, knowing about them. 3D has been difficult to prove itself to buyers who previously could have been at least somewhat blinded for consumer confusion and lack of exposure to the platform. But now we've all caught up with speed, and it doesn't matter. According to the survey, 3D glasses remain the biggest obstacle standing between consumers and 3D-capable TVs. But what about other products? Earlier today Nintendo announced that it will significantly reduce the price of 3DS to \$170. The 3D portable gaming device was supposed to be a hit, and a product that Nintendo has invested serious time, money and marketing in. Unfortunately, there hasn't been much winning yet, and Nintendo has just reported its first quarterly loss since 2003. The 3DS probably don't sell well for several reasons, the main one being the lack of 3D game titles to accompany the previously expensive device. But there were also complaints of eye fatigue and the consequences of the fact that 3DS is not suitable for a wide range of ages. We will soon find out if the price was a problem or if the 3D device is fundamentally flawed. To be fair, the original price of the 3DS was immediately determined as a potential drop. But, as with 3D TVs, Nintendo can't claim that disappointing sales are the result of consumer ignorance (or that these glasses are so unpleasant). The 3DS was one of the most anticipated products prior to its launch and generated enough attention among its target demographic. 3D smartphones haven't gotten as much attention as gaming devices or TVs, but we tend to say that most semi-interested smartphone users out there know about them. The jury is still out: there aren't many on the market, but we can see them falling the subject of the same problems as the 3DS. 3D just can't be a feature consumers are convinced they want to pay a little more in a smartphone. The HTC EVO 3D is \$199.99 with a two-year contract, and while that doesn't make it the most expensive phone on the market, it's still there. Oddly enough, one 3D product that has seen some noticeable traction lately is a 3D printer. The cost of the devices has decreased recently, making them much more attractive to the average consumer. And web services offering to print your 3D creations and send them to you have also become popular. But the fact remains that 3D just doesn't take off: whether it's price or screen, glasses or apathy to technology, consumers are simply not convinced - and 3DS is just the latest example.
