Electric circuits 10th edition nilsson

- كتاب Electric Circuit 10th Ed Solution Guide James W. Nilsson Emeritus Professor at the University of Iowa Susan A. Riedel Marquette University Content List examples xiii Preface XVII Chapter 1 Chain Variable 2 Practical Perspective: Balancing Power 3 1.1 Electrical Engineering: Overview 4 1.2 International Systems Units 8 1.3 District Analysis: Overview 10 1.4 Tension and Current 11 1.5 Ideal Core Circuit Element 12 1.6 Power and Energy 14 Practical Perspective : Balancing Power 17 Summary 18 Problems 19 Chapter 2 Chain Elements 24 Practical Perspective: Heating with Electrical Radiators 25 2.1 Tension and Current Sources 26 2.2 Electrical Resistance (Ohm's Law) 30 2.3 Building District Model 34 2.4 Kirchhoff Laws 37 2.5 Chain Analysis, Containing Dependent Sources 42 Practical Perspective: Heating with Electric Radiators 46 Summary 48 Problems 48 Chapter 3 Simple Resistive Circuit 56 Practical Perspective : Resolute Touch Screens 57 3.1 Resist in Series 58 3.2 Resists Parallel 59 3.3 Tension-Divider and Current-Divider Chain 61 3.4 Voltage Separation and Current Division 64 3.5 Voltage Measurement and that 66 3.6 Resistance Measurement-Wheat Bridge 69 3.7 Delta Wye (Pi-to-Tee) Equivalent Chains 71 Practical Perspective: Resistant Touch Screens 73 Summary 75 Problems 76 Chapter 4 District Analysis Methods 88 Practical Perspective : Chains with realistic resistors 89 4.1 Terminology 90 4.2 Introduction to the node-voltage method 93 4.3 Node-voltage method and dependent sources 95 4.4 Node-voltage method: Some special cases 96 4.5 Introduction to the grid-current method 99 4.6 Method grid-current and dependent sources 102 4.7 Grid:Some special cases 103 4.8 Node-voltage method vs. grid-current method 106 4.9 Source Conversions 109 4.10 Th'venin and Norton Equivalents 113 4.11 More on the removal equivalent of Th'venin 117 4.12 Maximum Energy Transmission 120 4.13 Superposition 1222 Practical Perspective: Chains with Realistic Resistors 125 Summary 129 Problems 130 Chapter 5 Operational Amplifier 144 Practical Perspective: Strain Gages 145 5.1 Operating Amplifier Terminals 146 5.2 Terminal Voltages and Currents 146 5.3 Inverting-Amplifier Circuit 150 5.4 Amplifier Summation Scheme 152 5.5 Non-Inverting-Amplifier Chain 153 5.6 Difference-Amplifier Chain 155 5.7 More realistic model for operational amplifier 159 Practical Perspective : Strain Gages 162 Summary 164 Problems 165x Content Chapter 6 Induction , Capacity, and Mutual Induction 174 Practical Perspective: Capacity Touch Screens 175 6.1 Inductor 176 6.2 Capacitor 182 6.3 Series-Parallel Combinations of Induction and Capacity 187 6.4 Mutual Induction 189 6.5 Closer Look at Mutual Induction 193 Practical Perspective: Touch Screens 200 Summary 202 Problems 204 Chapter 7 Response First Order RL and RC Chain 212 Practical Perspective: Artificial Pacemaker 213 7.1 Natural Reaction RL Circuit 214 7.2 Natural Reaction RC Circuit 22 0 7 .3 Step Response RL and RC Chain 224 7.4 Common Solution for Step and Natural Responses 231 7.5 Consecutive Switch 236 7.6 Unlimited Response 240 7.7 Integration Amplifier 241 Practical Perspective : Artificial Pacemaker 245 Summary 246 Problems 247 Chapter 8 Natural and Step Responses RLC Chain 264 Practical Perspective: Watch for Computer Timeline 265 8.1 Introduction to Natural Reaction Parallel RLC Circuit 266 8.1 2 Forms of Natural Reaction Parallel RLC Circuit 270 8.3 Step Response Parallel RLC Circuit 280 8.4 Natural and Step Response Series RLC Circuit 285 8.5 Chain with Two Integration Amplifiers 289 Practical Perspective : Hours for Computer Timeline 293 Summary 295 Problems 296 Chapter 9 SynusoidAl Sustainable-State Analysis 304 Practical Perspective: Household Distribution Chains 305 9.1 Synusoid Source 306 9.2 Sin 309 9.3 Fazor 310 9.4 Passive chain elements in frequency domain 315 9.5 Kirchhoff Laws in frequency domain 319 9.6 Series, Parallel, and Delta-to-Wye Simplification 320 9.7 Source Conversions and Equivalent Chain Temenin-Norton 327 9.8 Method Knot-Voltage 330 9.9 Grid Method-Current 331 9.10 Transformer 332 9.11 Perfect Transformer 336 9.12 Fasor Charts 342 Practical Perspective: Household Distribution Chain 344 Summary 345 Problems 346 Chapter 10 Sinusoidal Sustainable-State Power Calculations 358 Practical Perspective: Vampire Power 359 10.1 Instant Power 360 10.2 Medium and Reactive Power 361 10.3 Calculations of the value of rms and power 366 10.4 Complex power 368 10.5 Power calculations 369 10.6 Maximum energy transmission 376 Practical Perspective : Vampire Power 382 Summary 384 Problems 385 Chapter 11 Balanced threef phase chain 396 Practical Perspective : Transmission and Distribution of Electricity 397 11.1 Balanced Tritas Phase Voltage 398 11.2 Tritas Voltage Sources 39911.3 Analysis Wye-Wye Circuit 400 11.4 Analysis Wye-Delta Circuit 405 11. 5 Power calculations in balanced three phases of the chain 408 11.6 Measuring average power in three phases of the chain 413 Practical Perspective : Transmission and Distribution of Electricity 416 Summary 417 Problems 418Contents xi Chapter 12 Introduction to Laplace Conversion 426 Practical Perspective : Transitional Effects 427 12.1 Definition Of Laplace Conversion 428 12.2 Step Feature 429 12.3 Pulse Function 431 12.4 Functional Conversion 434 12. 5 Operational Conversions 435 12.6 Application Laplace Transformation 440 12.7 Reverse Conversions 442 12.8 Poles and zero f (s) 452 12.9 and the Final Value of the Theorem 453 Practical Perspective: Transitional Effects 456 Summary 457 Problems 458 Chapter 13 Laplace Transformation in Chain Analysis 464 Practical Perspective: Surge Suppressors 465 13.1 Chain Elements in Domain 466 13.2 District Analysis in Domain 468 1 3.3 Applications 3.3 Applications 3.3 Transmission function 482 13.5 Transmission function in partial extensions of faction 484 13.6 Transmission function and Integral Integral 487 13.7 Transmission function and Sustainable State sinusital response 493 13.8 Impulse function in District Analysis 496 Practical Perspective : Surge Suppressors 503 Summary 504 Problems 505 Chapter 14 Introduction to Frequency Selective Schemes 520 Practical Perspective: Pushbutton Phone Chain 521 14.1 Some preliminary 522 14.2 Low-strength Filters 524 14.3 High Pass Filters 530 14.4 14.5 Bandrear Filters 543 Practical Perspective: Pushbutton Phone Chains 548 Summary 548 Problems 549 Chapter 15 Active Filter Chains 556 Practical Perspective : Bass Volume Control 557 15.1 First Order Low Pass and High Passibility Filters 558 15.2 Scaling 562 15.3 Op Amp Bandpass and Bandreject Filters 564 15.4 Higher Order Op Amp Filters 57 1 15.5 Narrow Bandpass Bandpass Bandpass and Bandrear Filters 584 Practical Perspective: Bass Control Volume 589 Summary 592 Problems 593 Chapter 16 Fourier Series 602 Practical Perspective: Active High Level Filters 603 16.16.1 Fourier Series Analysis : Review 605 16.2 Odds Fourier 606 16.3 Effect of symmetry on Fourier coefficients 609 16.4 Alternate trigonometric form of the Founier Series 615 16.5 Appendix 617 16.6 Medium Power Calculations with periodic features 621 16.7 Rms Value Periodic Function 624 16.8 Exponential Form Fourier Series 625 16.9 Amplitudes and Phase Spectra 628 Practical Perspective : Active High-quality Filters 630 Summary 632 Problems 633 Chapter 17 Fourier Conversion 642 Practical Perspective: Filtering Digital Signals 643 17.1 Conclusion 644 17.2 Convergence Fourier Integral 646 17.3 Using Laplace Transform to Find Fourier Converts 648 17.4 Fourier Converts in Limit 651 17.5 Some Mathematical Properties 653 17.6 Operational Conversions 655 17.7 Chains Applications 659 17.8 Parse Theorem 662 Practical Perspective : Digital Signal Filtering 669 Summary 670 Problems 670xii Content Chapter 18 Two-Port Circuit 676 Practical Perspective: Characteristics of Unknown Circuit 677 18.1 Terminal Equation 678 18.2 Two-Port Options 679 18.3 Analysis discontinued Two-Port Chains 687 18.4 Interconnected Two-Port Chain 692 Practical Perspective: Characteristics unknown scheme 695 Summary 696 Problems 696 Application Solution linear simultaneous equations 703 A.1 Preliminary Steps 703 A.2 Kramer Method 704 A.3 Determining 704 A.4 Definition numberer 704 A.5 Determinant Score 705 A.6 Matrix 707 A.7 Matrix Algebra 708 A.8 Identity, Supplement, Reverse Matrix 712 A.9 Separate Matrix 715 A.10 Appendix 718 Appendix B Complex Numbers 723 B.1 Notation 723 B.2 Graphic View Complex Number 724 B.3 Arithmetic Operations 724 725 B.4 Useful identifiers 726 B.5 Energy Integrative No. 727 B.6 Roots Of Integrated Application No. 727 C More on magnetically connected coils and ideal transformers 729 C.1 Equivalent circuits for magnetically connected coils 729 C.2 Need for ideal transformers in equivalent circuits 733 Appendix D Decibel 737 Appendix E Bode Charts 739 E.1 Real, Poles First Order and Zeros 739 E.2 Direct Line Amplitude Plots 740 E.3 More Accurate Amplitude Plots 744 E.4 Direct Line Phase Corners 745 E.5 Bode Charts : Complex Pole 747 E.6 Amplitude Plots 749 E.7 Correction Direct Line Amplitude Plots 750 E.8 Phase Corner Plots 753 Appendix F Shortened Table of Trigonometry Identities 75 Appendix G Shortened Table 759 Application H Common Standard Values components 761 Responses to selected problems 763 Index 775 كلمة No فكل الضغط : books-world.net Unzip Password : books-world.net يجب عليك electric circuits
