Because an estimated two-thirds of American households have a dishwasher, it's likely that you're already well aware of the joys of their convenience. If so, you know that a dishwasher cuts precious time out of your chores, minimizes kitchen clutter, and uses less water to do a better job than hand washing. And, it accomplishes all this, often on a daily basis, year after year with few failures. Dishwashers Buying guideThe vanguard of today's dishwashers has really come of age. They do their job quietly and efficiently, with much less energy and water than models made just a few years ago. And they have intelligent controls that maximize ease of use. Indeed, features abound. When shopping for a new dishwasher, the trick is to know which features are worth paying for and which can be a bit over the top for your needs. For a full report on dishwasher energy efficiency, capacity, controls, styling, and the silent quotient, see the Dishwashers Buying Guide.How a Dishwasher WorksThough the convenience that a dishwasher offers is immeasurable, it really is a very simple machine. It is essentially just a waterproof box with mechanisms that spray the contents with hot soap and water, drain from residue food particles and dirty water, and then dry the contents. See How a dishwasher works for a detailed illustration and discussion of the inner workings of a dishwasher. Dishwasher Problem Solution & RepairsMany dishwasher complaints come down to the dishwasher that simply doesn't clean properly. Before blaming your dishwasher, make sure the water temperature is warm enough and that you use the right amount of detergent. For more specific problems, such as not filling the dishwasher or not stopping filling, leaking water or not draining, see Dishwasher Troubleshooting & Repairs.How to Install a Dishwasher Installing a new dishwasher requires a GFCI-protected electrical container, a connection to the hot water supply of the kitchen sink and a connection to the sink. Of course, if you replace your old dishwasher, the installation is an instant. For illustrated step-by-step instructions for installing a dishwasher, see Installing or replacing a dishwasher. Its clean of fluff, and exhaust is completely clear all the way outside, with pretty good airflow. I noticed through a small opening on the side at the back that the red hot, except for a small 1/4 section on the top left. I opened it and there's only one element and its clear of the enclosure. Which can cause only one part of the coil to not heat up while the other is red hot? any help is appreciated.-Bill ** Frigidaire Gallery Dryer** I'm afraid that's not enough information to identify the device in question. What is needed is the exact model number. If you post it we can look it up to see what device design you are dealing with. Tips for locating the model and the serial number identification label on your devices can be found via the following link:- Model Number Tag Location Guide LINK > www.appliance411.com/parts/tagsearch.cgi** The dryer gets too hot. ** Where exactly is getting overly hot? ** exhaust is completely clear all the way outside, with pretty good airflow. ** How long is the vent and what material if it's made of (see the following link).- How long can my dryer vent be? LINK > www.appliance411.com/links/jump.cgi?ID=778If the cabinet and/or top gets hot, which is usually a sign of poor airflow through the dryer. Try running a load or two with the vent completely removed to see if it's better... once the element problem was fixed (see below).** heating coil became red hot, except for a small 1/4 section on the top left. **Then part of the coil must be short circuit. Check the coil for breaks, especially around the insulators where a pause could be hidden from view.** I opened it and there is only one element and its clear from the casing. **The coil is made of metal that expands with heat. It's not impossible for a break to separate and short only when hot.** What can make only one part of the coil not heat up while the other 3/4 gets red hot? **Just a short circuit. The electricity bypasses that part of the element. The coil is just a piece of wire. Power should flow through it is uniform as it is only powered from each end. JMODan O. www.Appliance411.com/parts/?ref411=Frigidaire+Dryer The Appliance Information Site =D----- The model number is FSEC849GHS0. I haven't been able to find it anywhere.1. Get too hot at the back of the top, and back.2. Vent length is corrected to 7 meters, and is made of corrugated metal. I hope that will help.3. I double checked for shorts, but there are none. As I walked a few cycles without the hose I noticed the element again and it was uniformly glowing, and seemed to shut down correctly for the various cycles. Just not sure of the temperature. Still it seemed just as hot during the low heat and high heat cycles, but the length of time it was on before shutting down seemed right, so there might not even be a problem anymore. Could there be a thermostat problem? Or maybe just the exhaust? I'll put it all back together and see how it goes with a real load.-Bill** The model number FSEC849GHS0. I haven't been able to find it anywhere** That seems like a Canadian model. Parts list are only rarely available online for Canadian products.** Getting excessively hot hot back on top, and behind. ** This is usually caused by poor air flow through the dryer. It is only the air movement over the element that keeps the heat low in that area.** The distance from the ventilation is corrected to 7 meters and is made of corrugated cardboard. ** Only 7-feet from the dryer all the way* to the outdoors*?? By corrugated iron, I suppose you mean flexible metal foil? And how straight is it? ** Since I ran a few cycles without the hose I noticed the element again and it was uniformly glowing, and seemed to shut down correctly for the different cycles. ** If that's different than when the vent is installed, that should be a big indication of the venting is (at least part of) the problem.** Could there be a thermostat problem maybe? **No thermostat problem should cause the cabinet to get hot. Just a bad airflow. JMODan O. www.Appliance411.ca/parts/?ref411=Frigidaire+Dryer The Appliance Information Site =D----- We have the same problem with the top & back that gets hot. I had a service man come in & check the dryer, he said it was fine, but also said that frigidaire has a lot of problems with heat. I went to the Canadian website & checked if there was a recall on this model. Don't remember, but from what I can see, these dryers are all having the same problem after a few years. I suggest you go to the Frigidaire Canada Website & email them your complaint like I did. Maybe they'll remember this model, too. Let me know if you've found a solution to the heat problem. Tania Hi, I just got the Frigidaire gallery dryer and it gets very hot on top back. Just wondering what others ended up doing with this problem. I was wondering if I should give it back -- it's about a month old. Thank you. ** are about 1 month old. ** If it's less than a year old and doesn't perform well, I suggest you call for warranty service. That's what it's for. Dan O. www.Appliance411.com/parts/?ref411=Frigidaire+Dryer The Appliance Information Site =D----- I have the same problem with overheating. I'm not sure if part of the coil doesn't glow like the rest. Even at No Heat/Fluff Dry setting, the dryer is still kicking out a lot of heat. Vent on the blower is all clean, good airflow. What am I missing? I just replaced the hot coil 2 weeks ago, and it's been hot ever since. There is also a noticeable hum after the dryer has run for a few minutes. Thanks to My frigidaire leq215ee1 dryer just started smelling like it was burning and you don't touch the back of the drum too hot. What could it be? I cleaned guy hose didn't help. Could it be the heat element? I see a lot of commentary on this issue, but no one posts the solution for Problem. I like my dryer doing the same thing. I waste two limiters so far. What is the cause of the problem? I had the same problem. back part of the top of dryer above element wa to get hot. Turns out my dryer venting was a little too long 10', with 2 -90 degrees and had filled with some fluff. I tried drying a load with only 4 feet of hose attached and too hot to touch top of dryer problem went away. I moved location of dryer, but the other solution was installing a dryer booster fan (over \$200!) I suggest you disconnect from your dryer exhaust and try drying a load for 15 minutes while disconnected. See if your dryer still gets too hot Bad bike timer on the blower Photo Courtesy of Frigidaire ProsCleaned and very well dried on the normal and heavy wash cycles Excellent dry performanceVerecht easy to load and useGreen light rays on the floor when cycle is completeFingerprint-resistant front panelWell-pricedConsLoud when performingStruggled with some very heavily polluted dishes A very good performer and very easy to use, the Frigidaire Gallery 24 Built-in Dishwasher #FGID2474QF is a bargain for \$799. For this price, you get a machine that not only cleans well, but comes with lots of high-end extras, too. The control panel is very clear and easy to use, and includes a favorite cycle that, once programmed, selects your desired cycle and options with just one touch. Nice perks at this price are: fingerprint-resistant stainless steel front; super-safe, cushioned stem leather holders; soft-grip rack covers to keep glassware and lightweight plastics in place; the ability to adjust the pressure of the water spray up or down, depending on the type and soil level of the load; and a green light shining on the floor to tell you when the cycle is complete. The only drawbacks were that it struggled with our lipstick-smeared cups and baked bean casserole dish, and was one of the louder models we tested. It got an average score for capacity and just above average for energy efficiency. Features: Removable, easy-to-clean filter; soft-grip stengware holder; soft rack cushion in top basket to secure glassware and plastic objects; favourite cycle; adjustable upper rack in height; variable water pressure adjustment; san upsized option; green light illuminated on the floor at the end of the cycle; smudge-proof stainless steel door; clean indicator on the door; folding teeth in both racks How We Tested: We evaluated 18 dishwashers, testing each machine car/normal cleaning cycle and heavy cleaning cycle, capacity for dishes/glasses and cutlery, drying on auto/normal cycle and heavy cycle, and the effectiveness of rinsing, after which we look for spotting and filming. We also looked at the ease of use, water and energy consumption of each machine and how loud or silent the dishwasher was during Use.
