Posted on February 19, 2008 – 07:35 AM How do you calculate the remaining time of your timeleft number? Posted on February 19, 2008 – 10:49 AM Although I saw a guide something like this on a pet page and used it before I think you did a great job! QUOTE How do you calculate the remaining time from your timeleft number? And yes the guide is missing how to calculate left time so I can add to the calculated time: QUOTE to calculate the time duration you have to remove from the last three zeros (in this case 3448) and divide the remaining number (usually four digits) by 60 and that will tell you how many minutes remain (in this case 3448/60 = 57 minutes). ~amaterasuchan posted on February 19, 2008 – 10:53 AM If the link STILL does not work for someone for some reason, please go to the PetPage Amaterasuan and look for the link there. I think it doesn't work because of what it gives you a hotlink. That is the main reason I think.
