Total downloads: 96 in iPhone Email you need for your performance with Spike Email for iPhone. Download Back to the Detailed Page Spike Email 2.8.5 David Allen, author of Getting Things Done and the inspiration for many posts round these parts, is giving away a free four-page PDF on his website that covers its basic principles for keeping email organized. Getting specific without going into too much detail, he explains the two-minute rule of why actions in a letter state should be separated from others, and why you should create your own system, such as Gina's modified Trusted Trio. Excellent reading for GTD neophytes, and a good brush for the rest of us. G/O Media may receive a \$21Click commission for viewYour boss needs an updated PowerPoint presentation file on Tuesday. Your spouse wants to read moreGetting Email under control (through digital inspiration) Coupons can help you save a lot of money on products, and the more you can get, the better. This master list of companies will send you coupons for products, and all you have to do is ask. Kristen Daane's blog Couponers United compiled a list of companies she emailed and received coupons from for free. All you have to do is send an email to the company's addresses on the list and you should get some coupons for your products either by email or snail mail. Sometimes coupons are even for free products, so you can try them out. Just don't forget to include your email address. The list includes companies such as Bert Bees, Folgers, Dannon, Lipton, Neutrogena, Wonderful Pistachios, and a ton of others, so be sure to check out the full list below. List of companies emailed for coupons By UnitePhoto by Carol Pyles. Use Outlook's distribution list to send the same email to a group of recipients. Setting up a distribution mailing list in Outlook is simple. Once you've created a distribution list, use this list to send messages to Outlook and send them to everyone on the list immediately. The instructions in this article relate to Outlook 2019, 2016, 2013, 2010, 2007; and Perspectives for Microsoft 365. To send the same email to the entire outlook list: Create a new e-mail message in Outlook. Go to the Home tab and select New Email. You can also send a meeting request to the distribution list. Select new items in the new Home tab group and select The Meeting. Choose To. Lifewire Highlight the list of distributions. Lifewire Select Bcc. Lifewire In the text box, enter your email address. To use the descriptive name in the To box, place a descriptive name in front of the email address and your address. For example, the post on the Phytokolex list will be Phytokodex. Choose OK. test@example Make a message. Lifewire Select Send send an email to everyone on the distribution list. Because your e-mail address is test@example.test@example.com. In the Message box you will get a copy. This does not indicate an error. Sharing a contact group or distribution list with a person or group of people using Outlook is simple and simple. Create a new e-mail message in Outlook. Go to the Home tab and select New Email. Go back to the main Outlook window and select People or Contacts from the navigation bar. If necessary, you can see the windows and the mailbox. Lifewire Drag a list of distributions from Contacts to an open message body. Lifewire Enter recipients you want to send a list to the To box. Enter the topic and any other information in the body of the message. Select Send. For more advanced email lists, including personalized email marketing, switch to a bulk email add-on for Outlook. Another option is to merge Outlook with your email function. Join our newsletter for technical tips, reviews, free e-books and exclusive deals! Please confirm your email address in an email we just sent to you. It is very quick and easy to share files via email. However, it is not ideal to use email as a permanent file repository, especially because this data may be lost or lead to exceeding storage limits. We're going to show you how to bulk download all your email attachments. We can collect all your email attachments from services such as Gmail, Yahoo and Outlook, and then securely store them in your local system. There's a variety of techniques that you can use, depending on your email provider, so check out the options below and see what suits you. If you have your own method to share, please let us know in the comments below. Office Outlook If you're using the office version of Outlook to receive email, you can use a macro to download attachments. It's pretty simple, so doesn't offer any advanced features, but it will get the job done effectively. First, download the mAttachmentSaver macro from the official Office page and remove the zip code. Open forecast and click Alt f11 to launch the VBA editor. Click Ctrl and M and go to the folder you just retrieved. Select mAttachmentSaver.bas and click Open. Click Ctrl s S to save and then close the VBA editor. Back in your inbox, search hasattachments: yes, to limit email only to those with attachments. Outlook is full of convenient filtering techniques like this. If you want to select all emails, click Ctrl and A. If you want to choose those in the range, hold Shift as you click Beginning and end. Also, hold Ctrl when you click to select individual emails. When you're ready, click Alt and F8 to open the macro window. Choose ExecuteSaving and Click Run. Finally, select the folder you want to export and click OK. You can also know how to export emails from Outlook. Gmail Save email and add-on apps for Gmail will export your attachments to Google Drive. What's what It stands out by the fact that it will automatically do it every hour, meaning that you never have to worry about manually performing the process ever again. Take the add-on page and click Free. This will need your permission to run, so agree to it if you accept the terms and conditions. After that, go to the add-ons, save the emails and create a new rule. Here you can identify specific filters, such as the sender, theme, and date. If you just want attachments, use the drop label to select your inbox, tick only Save the attachment file, and then click Select Disc Folder to choose the destination folder (you need to create a folder on the drive if you don't have an existing one to choose from). Once done, click Save. Click you run manually to run it immediately. The sheet will fill in the information that is loaded on the disk. Of course, you can always go to the Drive folder and click Download there to save a local copy of the files. Email Attachment Downloader is a handy tool because it works through various email providers. The only downside is that there are some features that you can only get in the paid version. This includes the ability to use multiple filters, convert data, and support Exchange accounts. A full comparison can be found on the program's licensing page. Download the zip code, remove it and run the installer inside. Click Settings. Here you can choose a mail server, so that whoever provides your email and then enter the account and password. Notice the black bar at the bottom because it contains important information - for example, for AOL you need to include POP in your email settings. When you're ready, click Test Connection to do just that. If it doesn't work, make sure you've turned on the POP/IMAP as needed, and that your account name and password are correct. Once you're good, click Save. Change the location of the save if you want the apps to display to another folder. You can set up the program further through the tabs. For example, in Folder/Files, you can limit your search to selected folders, you can determine the range of dates in your search, and filters can specify things like the sender or the topic line. When you're ready, click Connect and Download. Apps Back up for those who want a tool that works for most email services and has a wide range of settings and filtering options, we recommend Mail Attachment Downloader. However, if you don't need anything like fantasy and use either Office Outlook or Gmail, other tools Here will serve you well. See our guide to printing emails from anywhere in the world for more help. We also learned how to avoid problems with Apple Mail attachments.
