Much like a snowflake, each leg is different: something that works for one person won't necessarily work for you. It is important to find the right pair of boots for your feet, and take the time to try on different styles and sizes to ensure happy feet throughout the season. However, there are many options out there. How do you even begin to narrow the choice? To help you, let's tickle your hands with some tips and pointers from expert locksmiths leading Burton. When you shop for new snowboard boots, knowing that your riding style is the best starting point. Ask yourself what type of rider you are. Burton makes boots to accommodate different levels of ability and snowboarding styles, so determine your riding type below and check out the model boots we recommend. Nina Kay (@ninakay) helps her daughter Emma with her Burton Mini-Thunder snowboard boots. Soft and forgiving, these boots are perfect for new and aspiring snowboarders who need easy flexibility learning to turn. Conversely, they support in ankles and calves where your developing muscles need it most. Some of these boots also use fast lacing technology to make it easier to get them on and off. Soft Snowboard Women BootsMen's Soft Snowboard BootsKid's Snowboard Boots Anna Gasser provides her Limelight Boa® Boots. If taunting and jumping is your taste, we recommend our park line and freestyle boots. Whether you prefer landscape parks or urban places, freestyle boots tend to be softer all around with support in key areas. The high-quality liner provides comfort and cushioning for sharp landings and bumps, while various lacing systems allow riders to adapt the cosiness or looseness of the shoe. Show and say: Red Gerard is a big fan of his Burton Ionov. Generally more responsive than the other two categories above, all the mountains and freeride boots like the ones below provide more support so riders can fold fast turns and stomp more air conditioning. Most importantly, these boots have loads of comfort-driven technology and innovation in NIOCRIT, so your feet stay energized after long days of riding. All-mountain snowboard women BootsMen's All-Mountain Snowboard Boots Select Lacing SystemsUnlike your regular sneakers, snowboard boots go beyond traditional lace. At Burton, we have

three types of lacing systems, so you can quickly dial in (literally!) your preferred fit. Men's Burton Photon Boa® Snowboard Boot If you like fast and easy lacing, we recommend trying out the boa® closing. Using a stick to crank down wire laces, you can micro-adjust the integrity of your shoe without removing your gloves or opting on each individual The Boa® tightens your shoelaces evenly over your feet and loosens just as easily. Burton Mint women snowboard boot, if you like the old style of school lace but want something faster and more efficient, try try The zone™ system. Speed zone™ uses two lace pull that allow you to loosen and tighten the upper and lower areas of your shoe independently, so you can get a more individual fit. Shop Speed zone™ Lacing Boots Men's Burton Kendo snowboard boot If you prefer to lace up your own boots is a good ol' fashion way, traditional lace way. They give you complete freedom of lacing however you like, say, if you prefer the tongue a little looser and the bottom zone is snug and tight. The no-BS approach to traditional laces also puts these shoes in a more affordable category, if the budget is a factor. Shop Traditional Lacing Boots Odds, Price will also play a role in your purchase. But investing in snowboard boots doesn't always mean reaching for the most expensive couples. As prices rise, so does the quality of materials and technology. These technologies are often developed with advanced riders in mind. If you're newer on a snowboard or ride only a few days a year, it's the key to finding a boot that's designed for your abilities and needs, which often means looking at some of the most affordable options in Burton's lineup. Burton Boots by Price Get Fitted Marko Griic (@grilo) helps Emma try on boots. So you've identified several download models that fit your needs. It is now important to get installed properly before trying them out. Your street shoe size isn't always the same as your snowboard boot size, so don't think you'll slip your feet to the same size as your gym shoes. Do the seller measure your feet and recommend size to try. Once you've got a few pairs off the shelves, pull on a pair of real snowboard socks. (Read: No Cotton!) A single pair of over-the-black wool or synthetic blend socks are best for wicking away moisture and keeping your feet dry and warm when snowboarding. With your foot in the trunk, cinch up the inside lining, so snug around the whole leg. Then start working on the outer laces, again ensuring that the shoelaces are snug, but not too tight, right down to your foot. If you are new to riding, they will help you so you can appreciate what that feels like. It's not always immediately obvious if the boot fits your leg or not. Once you've got a couple laced up, give them a flexible test, lunge around the store, swinging back and forth from heel to toe and spending 5-10 minutes going through the mental checklist requirements. (Don't feel weird doing a set of walking lunges through the snowboard aisle is perfectly normal.) First, your hands should barely touch the end of the boots. If they curl up in a box or swim around, ask to try on a different size. Facebook, if you feel anything uncomfortable with the bat, like pressure points or too narrow width-chances, they will bother you even even On the hill. So, again, ask to try a different style or size until you find one that feels good while standing normally. Bear in mind that your boots will pack and soften the more you drive. Once you've got a pair of boots that fit well at first impression, start busting out a few more lunges. If the heel lifts up, try the simplest solution first: tighten the shoelaces and try again. But if your ankles and heels are still floating around, consider trying a different style or size. Take note of how flexible they are. Are they too tough? Too soft? Remember that different boots are built for different riding styles, so choose a pair that matches your dominant riding style. Also know that your boots will pack and soften the more times you drive, so take that into account. Adding feet to your boot liner can make a huge difference throughout the day to comfort, especially if you need arch support. And let's face it, most of us actually do. If you have flat feet or high arches, finding the right level of support will help distribute the even pressure throughout your leg. This equates to more spring in your stride. Or, snowboard-specific, more pop in your ollie. Investing in footbeds can range from \$20 for over-the-counter insoles to \$200 for custom insoles, but a number of specialty snowboard stores sell semi-custom insoles that provide basic leg shapes that can be heat-shaped in the oven to form the contours of your own feet. It's an affordable solution that will leave you feeling supportive. Do you want to try the boots? Find a local store near you that can help you find the right one. Once you've got your boots, take a look at our myth busting snowboard sized guide to help you find the right size riding style board. Any questions? Leave them below, or contact us to chat with Burton's management team. Go to the main content We recommend using leg length (Mondopoint). Find the official size conversion chart below.
