Shop online like a boss while we shower you with bonus deals like Santa Claus.Get bonuses with up to 5 Cashback coupons of your choice every month as you spend with Target Hunter! Choose English, Bahasa Melayu or Chinese as your main TNG eWallet language! We have done some behind-the-scenes fixes for you to enjoy eWallet.As always, it's #LebihBanyakEkstra touch with 'n Go eWallet.' I think I'm using this eWallet more for tolls and paying bills. A few technical problems arise when I tried to top up the maxis prepaying number... Twice I get no for that maxis number, then I calm down to call your customer service center. It's funny when she said oh it's already been done ma'am, the system said that it's done, I can't do much work here so I waited like 4 days and my parents still said no high up refund yet. Wow..... So what's to waste my time for this?? If there are multiple users a day having system problems like this as I do, what are you guys doing? Cheating on the lights of the day openly??? I can't repay and top up not at No. Yes, in the system it said it has been done successfully, but no high come in, have you got it? It's best I'm using cimb clicks up or so cos it goes instantly. I use your app cos it's easy to reload eWallet, and I can just tap to pay whatever I want without logging in banking. Please do something on this lost money.... Not even so much, but if multiple users got the same issue, u totally cheated the developer. ☹, we really appreciate you bringing this to our attention. We want to further investigate your issue. Please send us an email tngewalletcs@tngdigital.com.my so we can help you to resolve this issue. Agree with many other reviewer comments about an app for TouchnGo that overlooks the merger of something that launches the company's brand and service primarily - imagine years of installing all touch and going payment interfaces to scan TouchnGo cards on tolls, parking, etc., but when That you end up launching an app, developer and company don't even think of bringing value to the app despite the feedback of many users that it is important for the app to facilitate the reloading of touchnGo cards since we link our cards to ewallet top primarily. This is even more important now than after paying directly from ewallet in places where users want to use it more like tolls and parking or public transport is not available because we can only pay with cash or TouchnGo so we need to top up our TouchnGo card often (do you see why it will be useful for us to continue Use this app if only one of the things we can use this For this will be able to top up the cards? So it's really frustrating that it's not possible with this app). Meanwhile, elsewhere we can always choose to pay with credit card or a plurality of other conservation programs. So if your app is just like everyone else, then there's really no point in using this app ☹ management really needs to think again about strategy and implementation for this program. Hi there, while we like to allow you to use eWallet to reload your TNG card, this is not possible now as the TNG Smartcard card with the MIFARE chip requires contact card reader to enable transactions. That's why we created the PayDirect feature, which is currently working to expand into all highways around Malaysia. Apart from tolls, we are also working on expanding this feature to include public transport and other touch points as well! Don't touch like our 'go eWallet Facebook page' to keep updated. I am really disappointed that I was able to load my card or use an electronic wallet for my public transport fare as was why I decided to try the program primarily. Luckily I didn't load too much for the first time, without thanking vague and uncertain language that never just said obvious that you could use the credit of your electronic wallet on public transport. It could have saved me a lot of trouble I used credit eventually after a while at TnG vendors, but that's not what I considered this program for and it wasn't my first priority for the program. The TnG = TnG wallet should be reloaded, should be as simple as that. Anything Dili is a bonus yes I bet I want to have the same spiel of touch and go team about MiFare and blah blah blah, but I want to go out on limbs here and assume that others also faced the same problem. No doubt I can use my money elsewhere in loaded vendors, but it's not worth it and I prefer other cashless apps based on the ease of use and bonuses offered. Toll discounts take its toll(s) worth it, but once the discount is finished, honestly there is a great need to use this app to pay seeing duties as wallet credit and physical card credits are not interchangeable. We deeply regret your experience at our eWallet, we heard you!!!. Now we are working closely to include the transportation features of others to be available through our eWallet. As a young eWallet starter, we honestly acknowledge all comments and feedback for improvement, we hope you can stay with us for a while cook, thank you for your patience the developer, TNG Digital Sdn Bhd, has indicated that the app's privacy practices may include data handling as described below. [5] It allows users to pay in local stores via QR code, pay for toll and oil roads through RFID, pay bills and car parking, pay for purchases on e-commerce websites, taxi-hail mobile apps, grocery delivery, peer-to-peer banking, as well as book, film and airline tickets. Prior to forming an electronic wallet service, Touch 'n Go offered contactless card payments that allowed users in Malaysia to pay for toll roads and public transport as well as in retail stores and parking lots. [6] Touch 'n Go had previously entered mobile payments through a partnership with Maxis via FastTap in 2009. This allowed Maxis customers to pay with touch 'n Go technology that was integrated with their mobile phones. The payment system used near-field communications (NFC), which allowed users to pay card readers by tapping a mobile phone, which also supports physical credit, debit and Touch 'n Go cards. Only one mobile device was supported, the Nokia 6212 Classic. [7] According to Soyasinkao, the service was not widely adopted by customers, and poor reception meant it was generally considered unsuccessful. [8] In July 2012, Touch 'n Go announced a partnership with CIMB and Maxis to create an NFC-based online transaction service, which can be used on NFC-enabled smartphones, to allow users to pay via NFC[8] Touch'n Go Merchant touchpoint. Touch 'n Go relies on QR code to make payments. Prior to his partnership with Ant Financial, Touch 'n Go had originally released its electronic wallet app in February 2017, which was simply called Touch'n Go Wallet. It uses QR code technology to pay instead of relying on NFC technology in such a way By big players like Samsung Pay. The first version of the app allowed users to reload the prepayed mobile service, pay bills, buy movie tickets and flight tickets, send money from friends and family and pay in stores and restaurants, although initially the service was only supported in Dr. Ismail's TamanTon. E-wallet balances can be reloaded via JomPay, debit card, credit cards and touch 'n go reload PINs. [9] The initial release of touch'n Go wallet app was well received by users, especially during the trial on Dr Ismail's Taman Toon. [4] However, the additional performance where users can touch their balance to their physical 'n Go Card was criticized by many users, because of the unpleasant side effects in which funds on the physical card are not automatically channeled. Instead, they would send them to Touch 'n Go kiosks that users had to walk to to complete within 24 hours of sending money, otherwise the balance would instead be sent to their e-wallet account. [10] After plenty of criticism, Touch'n Go temporarily suspended the feature. [11] On November 15, 2017, Touch 'n Go was granted approval from the Central Bank of Malaysia to cooperate with Ant Financial, a Chinese-based financial company that operates AliPay,[5] to form a joint venture that will allow the technology and platform used in the AliPay app to touch on 'n Go electronic wallet services adopted.' [12] In June 2018, it was reported that Touch 'n Go pilot tested the use of Touch'n Go eWallet on fast transport, as the ticket system was activated on the Kelana Jaya line in the Klang Valley. [13] Touch 'n Go eWallet test was only applicable at Kelana Jaya, KL Gateway–Universiti, Kerinchi, KL Sentral, Dang Wangi, KLCC and Ampang Park stations. The test was reportedly successful until February 2020 and was supposed to be fully deployed on the LRT and MRT. [15] In August 2018, Touch 'n Go announced that it had begun testing RFID-based payment on toll roads for selected drivers from September 3, 2018 onwards. [16] At the same time, Touch'n Go cut smartTAG sales in favor of the RFID-based payment system. [17] On November 2, 2018, the second round of pilot testing was rolled out to allow even more drivers to sign up for the test before the RFID system became publicly available. [18] Initially, the installation of the RFID chip into the car can only be performed by Touch 'n Go staff at the RFID Connections Center.[19] However, as the RFID program was withdrawn from the test and made available to the public on February 15, 2020, users could install their RFID chip on their own from May 15, 2020. The chip itself can be purchased in Lazada and Shappi. [20] Support for taxi hailing mobile apps was added in November 2018 when Touch 'n Go With Partner And the public cabin allows users to pay via QR code. [21] This was later expanded to support MULA on January 7, 2020,[22] and later MyCar on April 4, 2020. [23] On August 12, 2019, Touch'n Go hired former Firefly CEO and chief revenue officer of Malaysia Airlines Group, Ignatius Ong as CEO for Touch'n Go Digital, while Samsudin's Syahrunitizam became CEO for its parent company, Touch'n Go. [2] As of October 1, 2019, some e-commerce websites owned by Alibaba Group began supporting Touch'n Go eWallet payments, although initially only retail sites TMall and Taobao.[24] with the support of Lazada added on 29 October 2019. [25] Touch'n Go was one of three electronic wallet services in Malaysia (the other reinforced and GrabPay) that are eligible for its users to get remote control of 30 stimulus schemes as part of the E-Tunai Rakyat plan under the 2020 budget of a scheme that encourages cashless and mobile payment approval in Malaysia. [26] Unlike its competitors, GrabPay and Boost, where their P2P transmission capability was completely disabled until users fully finished the 30 remote controls that were received from the stimulus scheme, Touch 'n Go eWallet, on the other hand, did not show up an additional 30 remote controls of their user balance when users attempted to perform the P2P transmission, the P2P transfer capability still Both are usable despite the balance of the stimulus scheme still remaining inside your account. [27] Touch 'n Go eWallet joins DuitNow, an electronic transaction ecosystem in Malaysia which allows the funds from Touch 'n Go eWallet to be transferred to another competing services and versa, and allow to make payment in a merchant that uses only one unified DuitNow QR code, which this QR code can be used by competing e-wallet apps as well. Announced in February 2020, it is scheduled to be operational by July 2020. [28] Japan has become the first country outside Malaysia to support Touch'n Go eWallet payments via Alipay Connect. [29] As of early 2020, during the COVID-19 pandemic and enforcement of movement control order, Touch'n Go eWallet and other rival e-wallet services have seen an increase in the use of cashless payments as many users rely on these services to pay for takeaways and donations to zakat organizations. Passing cashless payments will also hopefully help SMALL and medium-sized enterprises grow and maintain during the epidemic period. [3] Touch service 'n Go eWallet is used on smartphones with your touch 'n Go eWallet app.' It uses QR code technology as a payment method for local payments in store. [9] Touch'n Go eWallet app also provides features such as paying utility bills, collecting debt, paying court fees, [30] car parking payments,[31] P2P transfers,[32] top-up mobile prepaying, airline ticket reservations[33] and booking movie tickets. [34] Auto-reload feature allows users with low credit balances to automatically It uses credit cards that can be added to your apps. [35] In addition, the app allows users to view the balance
