

The science is clear: climate warming is an ongoing threat to life on this planet. It's due to human activities, principally by burning fossil fuels. But we know how to stop climate warming: by adopting sustainable energy practices. Each of us has an obligation to contribute.

Consolidated local action will allow us to purchase blocks of sustainable energy through Community Power. It is an important tool which can help the Monadnock region enjoy cleaner air for its residents, attract thriving businesses, and do its part to slow down or reverse the climate crisis.

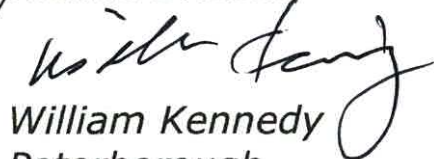

The voters of Peterborough have an opportunity to speak in support of a local and national program called Ready For 100, as promoted through the Peterborough Energy Action Committee. Warrant Article #10 on this May 11th ballot puts us on to a path towards 100% sustainable energy use.

Article #10 is an opportunity; it does not force anyone to act. But if you vote for article #10 and do act, we will reduce the likelihood of drastic harm to our lives or our prosperity.

Sincerely,

Jeanne Dietsch
