## Easy clarinet songs youtube

The clarinet has undergone many changes and innovations over the years. From its first creation, during the late 1600s, to today's clarinet models, this musical instrument has certainly gone through a lot. Due to the improvements you have undergone, there are many different types of clarinets made over the years. Here are some of the well-known types of clarinets from the loudest to the lowest voice: Soprano Clarinet in A-flat - Most commonly used in Europe and Australia as part of their military band. This type of clarinet is very rare and considered a collector's item by some. Soprano Clarinet in E-flat - Also called baby clarinet due to its small size. In the past, it took the place of the horn or high trumpet. This is the type of clarinet used in Berlioz's Fantastique Symphony. Soprano Clarinet in D - It is shorter than the Clarinet C and is easier to touch than the E-flat clarinet. This is the type of clarinet used by Richard Strauss in Till Eulenspiegel. Clarinet in C - This type of clarinet is suitable for children due to its small size. It is shorter than the B-flat clarinet and pitched the same as pianos and violins. It is best suited for beginners to use. Clarinet in B-flat - This is the most used type of clarinet. It is used in a variety of musical ensembles, such as school bands and orchestras. It has a range of 3 1/2 to 4 octaves and used in various musical styles, including jazz, classical and contemporary. Clarinet in A - Used primarily in symphony orchestras, this type of clarinet is longer than the B-flat clarinet and is released a half note below. Used by Brahms and Mozart in their chamber music. Bass Clarinet in A - This is one of the rare types of clarinets. It is constructed in a similar way to a clarinet A. There are two types of basses, the straight clarinet and the bent horn. Used in Quintet for Clarinet and Strings by Mozart and Concerting Duo by Mendelssohn. Bass Clarinet in F - Similar in size as the Alto clarinet, but released in F. In the past, this type of clarinet was folded in the middle, but is now straight with a metal neck. Used by Mozart in his Requiem. Alto Clarinet in E-flat - Suitable for smaller musical ensembles and is released in E-flat, an octave lower than the baby clarinet in E-flat. It is larger in size and players of this type of clarinet often use a strap or a floor pin. Bass Clarinet in B-flat - A heavy type of clarinet that needs a floor support to be played. It has a bigger bell and a curved neck. There are two variants of this type: one descends down C and the other descends down E-flat. Used by Maurice Ravel in his Rapsodie Espagnole. Against Alto Clarinet in E-flat - This type of clarinet sounds one octave below the top and has two shapes: straight and loop. It has a deep record, but rarely used in orchestras Against Bass Clarinet in - This type of clarinet is one octave lower than the bass. It has a straight shape, which is about 1.80 m long and a U-shaped, which is about 1.80 m long. Can be made of metal or wood. There are still other types of clarinets, but the ones listed above are the best known among the clarinet family. Summer officially ends next week. Bummer. But you still have all those vacation videos to help you remember the good times, right? In the age of YouTube, you can inflict your home movies all over the world, not just on your friends and family. Here's a look at two products - the Flip camcorder and Casio's Exilim EX-277 digital camera - designed to make it easier to be a YouTuber.Prices: 512MB version, about \$109; 1GB version, about \$120 Digital's compact, affordable, easy-to-use camcorder comes with software for your PC or Mac that, among other things, allows you to upload videos to YouTube or Grouper. I reviewed the camcorder in June, so I'll cut to the chase and say that uploading to YouTube is relatively easy—the camcorder's PC software eliminates a few steps. But it's not as easy as the YouTube upload software that Casio offers. (More on that in a moment.) To upload the video, connect the Flip camcorder via USB to your PC or Mac and run flip video software on your computer (the software is preloaded into the camcorder). Choose Share video and then share online and select YouTube. The PC software forms the video for YouTube, places the formatted video clip file in a new folder called Upload to YouTube on the desktop, and launches YouTube in Microsoft Internet Explorer on your PC. From there, you log in or create an account and type a title, description and tags for your video. Finally, using YouTube in Internet Explorer, you find the video file and click Upload.Your uploaded video will appear on YouTube soon. How long you wait depends on the length of your clip, how busy you Tube servers are, and so on. Flip PC software inserts a brief, silent promotion for the Flip camcorder at the end of the YouTube clip—and you can't delete it. You would have to upload your video clip manually, without using flip PC software, to avoid promotion. Priced: \$199Exilim EX-277 is one of four recently released or recently released Casio digital cameras that feature a YouTube capture mode—meaning cameras can capture ideally formatted video clips for YouTube. The cameras come with free software, which you install on your PC, to upload video clips stored in the camera directly to YouTube from your PC. Casio says he has an agreement with YouTube to be the only provider of YouTube mode until the 2007. The other Exilim models with YouTube mode so far are the EX-S880 (US\$ 300), the EX-V8 (US\$ 330) and the EX-Z1080 (US\$ 280). I took the EX-277 with me on a recent trip to Ogunquit, Maine. At home, I carried two two video clips to YouTube using Casio software on my Windows Vista PC. You can see both clips in Traveler 2.0. One clip was filmed in bright sunlight, the other during the full moon. YouTube's video capture mode is a bit tricky to turn on. You must click the BS button (means Best Shot), then scroll through a preset photo and video modes menu. You'll find YouTube mode at the end of the options. Select it using the Camera Set button to activate video mode, which captures in Video format MPEG-4 H.264 at 640 by 480 pixels, with up to 30 frames per second. The YouTube upload software - which you install on your PC from an included CD - has uploaded the clips a dialog box case. The software automatically locates all video clips on your camera when it is connected to your PC via the included USB cable. You can load all clips or just the ones you select. Using Casio software, you can also enter a video title, description, and tags; select a YouTube category, such as Travel & Places; choose a language; designate our video as public or private; and tell casio software if you have a YouTube account or need to create one. When you're done, click Save and the software takes care of everything else. The Casio camera and YouTube software make uploading video to the site as simple as possible. One complaint: Casio software allows you to enter only up to 25 characters in total (including spaces) for your YouTube tags, which help other YouTubers find your video. However, you can insert many other characters into the YouTube site. Neither the Flip camcorder nor the Casio digital camera gives you the best video quality. But if you just want to put your videos on YouTube quickly, Casio Exilim gets my vote. It's more expensive than the more expensive Flip camcorder, but because it's a 7.2 megapixel digital camera, the Exilim is much more versatile than Flip.For example, you can capture as many video clips in Exilim your Secure Digital card collection will hold, but with the Flip camera, you're limited to 30 or 60 minutes of video - depending on the model. You can delete your video clips in Flip to make room or delete them all after transferring the clips to your PC. Before buying any device, however, keep in mind a few things: First, it's not that hard to format and upload video to YouTube in the first place—if it were, there wouldn't be a trillion video clips on the site. Secondly, no product software allows you to do much, if anything, in terms of editing or adding effects, titles or transitions. For these tasks, you need video editing software. And third, video editing programs can make it easier to upload finished video for YouTube. For example, the latest version of Apple iMovie includes a YouTube upload feature. Apple's iPod Touch: Apple's new iPod Touch is, in essence, an iPhone iPhone phone. The latest iteration of iPod shares the touch screen, software, and Wi-Fi features of the iPhone. Apple will begin shipping the iPod Touch by the end of September. An 8GB model is \$299, while the 16GB model is \$399.Palm Cancels the Bellows: Palm canceled Bellows, a tree-sized smart phone companion that was supposed to ship by the end of the summer. Palm CEO Ed Colligan wrote on the company's blog that Palm canceled Foleo to focus on developing a single-device platform instead of two (one for Foleo, the other for next-generation smartphones). Colligan left the door open to introduce a modified Bellows II one day. TomTom GPS With Voice Recognition: The new TomTom GO 920 T has a speech recognition feature that lets you tell the device where you want to go, so you can keep both hands on the wheel. The portable unit will come with pre-installed maps of Europe and North America and will include an FM transmitter. It is expected to be shipped in the fourth quarter.
