What's on Android 9.0 Pie? As we said, Lineage OS 16 is based on the latest OS, Android 9.0 Pie. Android 9.0 Pie is the 9th iteration and major update to Google's Android OS. The new Android Pie brings several changes to the design of the successor to Android Oreo, but the most notable of these is the gesture based on the navigation system. Other features of Android 9 Pie are new fast custom interface design settings, redesigned volume slider, Advanced BATTERY-enabled AI, Notch Support, Improved Adaptive Brightness, Manual Choice Theme, Android Dashboard, which Google calls digital well-being, and other features. Lineage OS 16 Based on Android 9.0 Pie? Lineage OS 16 is the latest stock custom firmware based on the official Android 9.0 Pie AOSP source code. Along with the official Android 9.0 features, Lineage OS 16 also brings tons of features and customization options that allow you to use your phone outside of the fund firmware function. Lineage OS is one of the famous aftermarket firmware built by the team behind the cyanogen. In the world of Android, Lineage OS is now the best custom drive built with many new features. This ROM will only work on this device, don't try this on any other device. Follow the steps correctly otherwise you can brick your device. We are not responsible for any damage to your phone. It will erase all your data, so we advise you to first take a full backup of your phone and then continue. Make sure your phone has at least 50-60% charged to prevent an accidental outage in between the process. 1. First download and install custom recovery on your device (TWRP is recommended) If you've already installed it, then skip this step. 2. Download the ROM and Gapps .zip file and store it on your device's internal storage or SD map. 3. Now, load the device into TWRP recovery mode. (if you don't know how to download a device in twrp recovery, then you can search for it on Google) 4. Now in TWRP create Nandroid to back up your device for the safe hand. If something goes wrong, you can recover back to your old ROM. (How to take Nandroid backup) 5. Now do a factory reboot of your device, Goto Wipe, Advanced Wipe, Select Cache, Dalvik Cache, System and Data. Then swipe to rub. 6. Now go back to the main TWRP menu by clicking the Center navigation button. 7. Now select install, find ROM mail file and swipe to confirm Flash. 8. After a flashing conclusion, Flash Gapps is fine. 9. Once Gapps flashes, select The Wipe/dalvik cache on the left side of the screen, and swipe your finger on the napkin. 10. Once you've finished wipe, click on the restart system. That's all Now you have successfully installed the Last Android on your device, the first download will take some time, so please don't panic! If you have any questions regarding the ROM or installation process, use the comments section below to contact us or contact members of the XDA XDA forum Link above.
