Android: Facebook rolled out its new Timeline feature yesterday, and if you've included a new cool interface, you can update the Android app to get it on your phone as well. Facebook has finally rolled out its long-awaited feature Timeline Today, which brings a chic... More the new version is basically an interface update, but if you use Timeline, you'll definitely want to check it out. You get cover photos, map sketches and a top-down view of all your messages. You can even navigate through albums right from the perspective of timeline, which is a very nice touch. The update isn't yet for iOS, but iOS users can head to m.facebook.com to see new changes if they so desire. Hit the link to find out more. Timeline: Now available on the mobile phone .en Facebook blog Windows: ADB and fastboot are two extremely powerful tools. If you're not into using them, or just want to simplify the process a little bit, Universal Assistant ADB can do some snap tasks. Last week we showed you how to install ADB and fastboot on any OS. If you're not sure why you would... MoreRudovo, which works like a Windows batch file, allows you to reboot, back up, rebuild, reset the plant, or change the download animation for your phone using a simplified menu. You can still use the tool to execute your own user commands, so that the Universal ADB Assistant can work as the main ADB interface without changing the normal flow when you need to do more complex tasks. (UTILITY) Universal_ADB assistant 1.2 XDA Android Debug Bridge (ADB) is a versatile command line tool that allows you to communicate with the device on the basis of Android and control it via USB link from your computer. It comes along with other useful tools and code complete with Android Software Development Kit (SDK). The ADB program includes three components: a client who works on your development machine. You can call a customer out of the shell by releasing adb command. Other android tools, such as the ADT plugin and DDMS, also create adb customers. A server that works as a background process on your development machine. The server controls the communication between the client and the adb-deemone, working on an emulator or device. Damon, which works as a background process on every emulator or instance of the device. Set up ADBOn Windows and LinuxIf you've installed Android SDK, Android Debugging Bridge will already be installed with it. Otherwise, follow our guide to installing Android SDK. On Macif, you've already downloaded Android SDK, run the SDK Manager by typing into the terminal window: For example, if Android SDK is on your desktop, you should enter the terminal window:Users/MyName/Desktop/android-sdk-mac_86/tools/androidAs, as soon as the SDK manager is running, click the Available Packages button, then Android Repository. When the list of available packages pops up, it's a list of available packages. proposed revision of Android SDK Platform Tools. Click Set Selected. If it is installed, the adb performed binary will be located in the platform-tools sub-point. If you don't have an Android SDK installed yet, download your latest version and unpack it in the appropriate destination folder then follow the instructions above. We want to make sure that the ADB is currently working. First, to have your Android device configured for debugging. On an Android device running Gingerbread, go to the zgt; apps and make sure USB Debugging is checked. If you're already on ice cream sandwich, go to the developer's settings and tick Android debugging or USB debugging. Connect your computer and Android device with a USB cable. Then open the terminal on your computer and run the following command: adb devices You need to see something like this: A list of devices attached to the XXXXXXXXXXXXXXX result like this (where X represents the actual serial number of your device) confirms that your ADB is configured and working. By studying CodesNow that the ADB is already configured on your machine, you can learn how to use its different flags and command parameters. Team flags- ddirects on the only USB connected device. Returns an error if there is more than one USB device.-redirects the team of the only running emulator; returns the bug if there are multiple emulators. Redefines ANDROID_SERIAL variable:-p's product name or 'path':simple product name as soon, or relative/absolute way to the product from the catalog as out/target/product/previously. If -p is not specified, ANDROID_PRODUCT_OUT environment is used, which should be an absolute path.deviceslist of all connected devices: connect to the device via TCP / IPdisconnect: disconnect from the zlt:host:gt;TCP / IP deviceCommandsadb Click a copy of the file /dir to deviceadb to pull the zlt:gt; 'adb help all' adb shellrun of a remote shell interactivelyadb shell to launch a remote shell commandadb emu run emulator console zlt:gt; commandadb logcat zlt:filter-spec:gt; forward specifications are one of:tcp: (only for remote) adb jdwp:PID's processes taking JDWP transportadb set (l) y-r's click this file на устройстве и установить, ero-1 означает <file>анепред-заблокировать приложение-r означает переустановить приложение . сохраняя свои средства передачи данных установить на SD-карту вместо внутреннего storageadb удалить<file> </process> </character> </unix> </unix> </unix> </port> </remote> </local> </filter-spec> </command> </command> </directory> </local> </remote> </remote> </local> </port> </host> </port> </host> </product> </serial> </serial> Delete this package of apps from the device (-k means to save data and cache catalogs)adb bugreportreturn all information from the device, that should be included in the error report.adb helphow This version of the help messageadb versionshow version numData OptionsDATAOPTS: (without option) do not touch the data section-wipe section of the data-dflash section of the datascriptingadb wait-for-device unit until the device onlineadb start-serverensure that there is a server runninga server runadb kill if it's runningadb get-stateprints: offline loader deviceadb get-serialnoprints: adb status-windowcontinent device status for the zlt:serial-number:gt;specified deviceadb remountmounts /System section on the device read-writeadb reboot loader reboot device, optionally in downloader or recovery programadb reboot-bootloaderreboots device in bootloaeradb rootrestarts adb daemon with root permissionsadb usbrestarts adb daemon listening on USBadb tcpip qt:port:gt;restarts adb daemon listening on TCP on the specified portNetworkingadb qt:it:gt; Note A: You don't have to automatically start connecting PPP. It refers to ty for PPP thread. For example. dev/dev/omap_csmi_tty1 options - For example. by default debugging of local notify usepeerdnsSyncadb synchronization - can be interpreted by several ways: If the directory is not specified as /system and /data sections will be updated. If it's a system or data, only the relevant section is updated. Once you already have ADB set up and functioning on your computer, you can start using it for many important Android-related tasks, such as creating Android apps, debugging Android apps, and rooting your Android phone. Check out our guides to rooting your Android phones. You hear the phrase Adb thrown around a lot in Android forums and blogs. We're guilty of that, too. But what is adb, and why do you need (or do not need to) use it? According to Google - Android Debug Bridge (adb) is a universal tool that allows you to control the state of the emulator instance or Android device. It certainly sounds like something Google would say, doesn't it? Simply put, adb is two different apps: one running on your computer (Windows, Linux or Mac) and one running on your phone. When your phone is connected and USB debugging is turned on, you can give out commands and communicate with your phone using your computer screen and keyboard. This is part of Android SDK for Windows, Mac or Linux. Sorry OS2/Warp. Your android phone uses the Linux kernel and tools as a base. This means that quite a few Linux commands can be sent through the adb server (the one that works on your клиенту адр (тот, который работает на вашем телефоне), и они будут выполнены. Частичный список из них можно увидеть в<directory> </localdir> </directory> </ty> </ty> </port> </serial-number></package> </serial-number></package> Above. It can be very handy for debugging things that don't go right, as well as sending those weird commands you need when you're hacking away in the middle of the night. Chances are, if you're not actively debugging something or trying to hack on your phone, you won't have much use for ADB. And that's fine - there's no right way to have fun with an android device. If you have use for adb, be sure to check out the Android Developer website for full use of the guide. Go ahead and fix it. We can earn commissions for purchases using our links. Learn more. Warp Speed It's Not All About Speed! You can finally use one of the best chargers and cables to charge your phone, laptop or any other device that supports fast USB charging thanks to changes with Warp Charge. Pixel strikes back, he's here. Google Pixel 5. From specs, prices, release dates, and more, here's literally everything you need to know! Alexa has gone hi-fi in the past, some have criticized Amazon Echo speakers for not having a rich sound profile of other devices from Sonos and Bose. Echo Studio has changed all this and offers audiophile experience to match its more expensive rivals much less. During prime day you can pick it up for \$50 s. You have power corded or wireless, electric tools are lovely. No need to worry about proper fuel mixtures, oil changes, or environmental impacts, just the ability to get a quick job. Sun Joe has some of the best electrical tools out there and on Prime Day there is no reason not to buy at least one. One. samsung android adb interface driver for windows 10
