So before you embark through our How to customize fossil watch guide first take some time to congratulate yourself for this big step. Now we also suggest you take some time to admire the new fossil watch you just bought. Good choice. We certainly understand that you don't want to just admire your new Fossil watch, which you want to use it too. This guide will help you customize the watch whether you've chosen from a fossil male range or a collection of fossil ladies. If you are the first fossil watch owner, then we suggest for you to work your way down through our How to Create Your Fossil Watch Guide. If you are a veteran, then please feel free to skip ahead in the section you need. In this guide, we'll look at: Let's start. Getting the time set up for your fossil clock Setting the time of your new watch is an obvious place to start and having a fossil look is no different. Setting the time of your Fossil watch will be slightly different if you have a date function on the watch face. If you have a date function, go ahead to the How to Change Date section on your Fossil watch. If you just want to change the time of your fossil clock then follow these three simple steps: Pull the crown (a small handle on the side of the head clock) from the side of the watch. Turn on the crown to adjust the hour and minute of the hand. Push the crown back on the head of the watch. And that's all you're ready for rock 'n' roll. Important: Please make sure that the crown is pressed back into the head of the watch or your fossil watch will not work. If you want to set the date and time of your new Fossil watch, then there are two different positions that the crown will be in. let's tell you how to change the date first. Don't worry, it's really simple. Remove the crown once from the head of the watch (time will change completely). Turn the crown clockwise or counterclockwise and set the date to the previous day. The direction that moves the date is different for each fossil watch model so it's not the right time. Once you have set a date on day, believe us, you can move on to changing the time. Pull the crown completely out of the watch's head. Turn the crown crown to advance the time and continue until the day changes to this day. Set at the right time for today. Push the crown back in full. REMEMBER: The crown should be pushed back in full for your fossil clock to work properly. How to change your fossil clock strap is the wonderful thing about the fossil clock level settings they offer. Each Fossil watch has a interchangeable strap meaning you can change your look with stylish ease. How to clean your fossil watch leather strap Taking care of your fossil watch is an important element ensuring you get the most out of your watch. Skin doesn't like water, so make sure you don't swim or shower with your skin strapped to a fossil watch. If you need to clean the leather strap, we offer a clean, soft, dry fabric. And it's that simple. No fancy oils or procedures are required. We offer to further ensure the contents of your leather fossil strap that you keep it out of direct sunlight. By that we mean, do not leave it on the windowsill or dresser in the sun. We're not for a second suggesting your watch should only be indoor watch, which would be weird, just not prolonged sitting in the sun for your fossil watch. If you want to keep the metal strap on the Fossil watch the same, but it needs a small size size you can follow the steps below to help you remove the links from it. IMPORTANT: Please note in accordance with our refund and refund policy, if you set up your fossil watch strap, you cannot return the watch as an unwanted product. If in doubt, please contact us. Before you set off to remove links from your fossil watch you will need the right tools. The following can be purchased online easily, sometimes as a package and sometimes as separate items. They are not expensive and priceless to do this job properly, so we strongly recommend that you get them. You'll need: Watch the Pin Punch block holder to watch the pins Watch Hammer - one with a head with a soft side and metal side We suggest you take on this task on a flat surface and somewhere safely put the clock pins while you adjust the links. First, measure your fossil clock to see how many links you would like to remove. This can be done by putting the watch on your wrist, closing the clasp, and then pinching the strap of the watch until it is comfortable to fit. Count the links that are optional and you'll know how much you need to delete. Put the watch on the block holder. Make sure the arrows shown on the links point downwards. When removing links, hold one end of the pin pusher against the pin, which will Strike the other end of the pin pusher with a metal side of the watch hammer until the pin slides out. It will slip in the direction of the arrow on the links. Two pins hold each link to the strip, so two pins must be removed to the link. To reconnect the clock strap together the position of the watch on on The block holder with arrows is now facing upwards. Overlap the two links so that the holes for each of them are connected. Insert the pin into each of the aligned holes to connect the entire time zone back together. Use the soft side of the hammer to hit the pin down into the link. Make sure all contacts are protected on the spot when you join the links. Put your fossil watch back on your wrist and enjoy. We hope you have found our How to customize a guide to fossil watches useful. If you have any further questions, please feel free to contact us. Written by Sarah Lincoln Wordsmith and watch enthusiast. Looking at hundreds of hours a month in an attempt to find the best clock on the first street. She has lived in Malta for 3 years and has followed the hottest trends there in the UK as well as in Ireland (where she hails from and now lives!). She understands that trends are changing and is dedicated to sharing her tips and tricks for audiences around the world. Considered over 5000 hours and she will not stop before she knows every watch there. Watch2U Social links Instagram-Twitter/Instagram-Twitter
