Lake Ct. Claim For Mishing residents are largered at the ground state of the control of the cont
Lake St. Clair For Michigan residents, no longer daily passes at the ramps. You need to buy an annual card for \$12 when you buy at a seam. Non-residents can still buy tickets daily for \$9, or annually for \$31. The card is also accepted at all Michigan State
Parks, Entertainment Areas, and State Forest Campgrounds. For vehicles not registered Michigan only: Pass is good through December 31 of the calendar year in which it was purchased. BUT, here's a little kick in the butt for the first year you bought one for Michigan residents According to the State
Please note that the Entertainment Passport expires when your license plate expires, whether you purchased it during vehicle registration, after vehicle registration, aft
first summer to get into the rotation if you're going to be launching in spring and autumn. What if there was a DNR representative to greet you on the way in and you didn't have a Entertainment Passport? If you are a Michigan resident, you will have to pay \$17 to buy a passport annually (no daily). If you're
out of state, you can choose to buy one day at \$9 or annually for \$34. What if there was no one at the launch seam to sell me a Entertainment Passport? Did I get my ticket? According to DNR: No, you will not receive tickets if you enter these facilities and someone is not present to sell you entertainment.
passports. We noticed some travelers may not have purchased a Entertainment Passport when they arrived at a DNR facility. You will simply receive a notification on your car that will assist you in purchasing a Mail Entertainment Passport. Do you really need an entertainment passport? Just as
important to know, Entertainment Passports are only available for sites that visit The Michigan State Rowing. It is not accepted at local Metroparks, such as Lake St. Clair mare than a second base on the late of the state of the stat
their own boots, such as St. Clair Shores 9 Mile Launch and Brandenburg Park of Chesterfield Township. If you plan to launch your seasonal boat onto Lake St. Clair more than once, then it is wise to pay only the \$12 annual fee when you renew your license plate tab. Non-residents can only purchase a

fishing reports: Get fishing reports sent to your inbox every week! The Channel Cat research vessel is a steel shell fishing traw around a trap fishing operation, similar to the Lake Erie trap net tow boat. It was built for dnr in 1968 by Maybee Boat Company in Point Place, Ohio. Since that time, Channel Cat has served as a working platform for Great Lakes fisheries research. Channel Cat's home port is DNR's Lake St. Clair Fisheries Research Station located at the Clinton Estuary on Lake St. Clair. As originally built, Channel Cat is 36 feet long. In 1975, the ship was stretched 10 feet in the middle. The
current ship length is 46 feet with a 13-ft beam and a total weight of 24 tons. It was originally powered by a Detroit Allison 216 horsepower 6V 53 Detroit diesel engine. In 2016, it was equipped with two Cummins 301 hp QSB6.7 engines. The English Channel has a flight speed of 15 knots. Two fuel tanks
carry a total of 380 gallons of diesel fuel. The ship is hydraulic equipped to operate a fishing canal. Instrumentation includes GPS, navigation, radar, sonar, autopilot, EPIRB, sea band radio, and cell phone communications. In addition to the new engine and gearbox, recent upgrades to the ship have
included working floor cover and air conditioning (2016). Cat channel R/V conducted fish samples on the waters of Erie, St. Clair/Detroit River System, and Saginaw Bay. The ship's operating season usually lasts from late March to early November. Fish sampling equipment deployed from the vessel
includes carrying nets, trap nets, fishing nets and lines. The standard crew consists of 2 captains, a biology student, technician and aquatic assistant. The operating cost of the ship per sampling day is estimated at \$2,000. Walleye is biting in Saginaw Bay and Austin Harbor this week. (Joel Dueck /

Commons) DNR Weekly Fishing Report If you are going fishing, please do your part to keep yourself and others safe by following the COVID-19 public health and safety guidelines. Go fishing only if you feel healthy. Practice away from proper society, at least 6 feet from people who don't live in your
household. Regularly wash your hands with soap and warm water, or use hand disinfectants. Recent hurricanes and strong winds have slowed fishing for bass and panfish should be fair to good. Stream salmon fishing has been very difficult with
hot weather. Most fishing people do not want to fish when the spring temperature is above 70 degrees, as it can make catching and release more difficult. All fishing people aged 17 and over must have a fishing permit. Southeast Lower Peninsula Lake Erie Walleye moves deeper and is caught at an
altitude of 28 feet or more, especially near Fermi and Landfill with crayfish-colored bait. Very few fishing limits are recorded. Perch anglers were getting a few out of Metro Park and near banana dykes with perch rigs and minnows. Hot ponds are still producing tradies. Detroit River It produces walleye
occasionally. Smallmouth bass caught in the mouth and around the islands. Lake St. Clair Walleye is still being caught out near the edge of the shipping channel on the main lake by users of an information-gathering exploit or artificial bait. Small mouth bites are still difficult as the midsummer pattern
means larger fish have moved out into deeper water. Try a slow presentation near the bottom in 18-20 feet. Look for gaps in lawn beds and piles of rocks. The musky bite has also been tough. Saginaw Bay Walleye was caught 14 to 16 feet between Sagining and Pinconning Bars and in front of Bay City
State Park when trolling a crawler exploiter. Wind conditions restrict fishing in the east. A Walleye couple has been arrested off Quanicassee. Very few boats were recorded off Sebewaing and until Caseville; however, a walleye couple caught in 30-40 feet off Oak Point. Hurricanes and wind winds there
are scattered fish. Saginaw River Shore catcher at Smith Park in Essexville fishing catfish and freshwater drums on worms. Port Austin Walleye fishing is good around the lighthouse and west in 25-45 feet with artificial bait and board. Steelheads were also arrested from time to time. Grindstone City A
Walleye couple was caught straight out in 25 to 35 feet with an information-gathering or artificial baits. Harbor Beach
Steelhead was caught in 80 feet using a spoon. A Walleye couple was also arrested. Port Sanilac and Lexington Pier caught slowly at Port Sanilac and no reports were given to Lexington. The northeastern Cheboygan Peninsula River Two troughs were opened at the dam. Anglers have captured
smallmouth bass, rock bass and walleye when the bottom bounces or drifts deep. The walleye was 15 to 17 inches. Rogers City Anglers are fishing salmon, walleye and atlantic regularly or coho when fishing throughout the water column for 70-120 feet using
downriggers, lead cores, copper and dipsey divers with spoons. Hot colors are green, blue, black and white, orange, purple and glow early or very late. Bait fish are being marked both shallow and deep. Presque Isle It continues to produce the same species in 50
to 130 feet with the same colored spoon. A lot of bait fish are marked in 30-70 feet and most seem to be sly about 3-inches long, so match your baits to them. Alpena These targeted salmon and salmon caught a mixed bag of lake salmon, steelhead, pink salmon, walleye and coho regularly when trolling
spoons and spin-glo in 80-160 feet off Thunder Bay Island and Wreck Nordmeer. Anglers find walleye, cat channels and freshwater drums when trolling or casting spoons, crankbaits and a crawler. Evening is best. Walleye was also found hovering in deeper waters outside the bay. Thunder Bay River
Anglers catch small mouth bass, freshwater drums, rock bass and canal cats occasionally when drifting or floating cows. Oscoda Anglers catches lake salmon, walleye, coho and occasional Atlantic or white fish. Most were trolling spoons and spin-glo with or without attractors in
the 80-180 feet between Three Mile Park and Au Sable Point. Spoons are most effective. Lake salmon were scattered throughout the water column and most of the silverfish were 20 to 70 feet down. Walleye was sluggish; however, some have been found shallower and others have been made by
crankbaits trolling or exploiting. Pier anglers catch freshwater drums, rock bass and smallmouth bass while still fishing, floating or drifting cows. The odd walleye on crankbaits in the evening. Au Sable River Anglers catches freshwater drums, smallmouth bass, rock bass and a few small perch with
of armbalic troiling of exploiting. The data water arams, fook bass and a few small peron with
crawlers in the downstream region of the river. A couple of northern pikes and smallmouth bass were caught by casting spinners and crankbaits in the deeper holes and near the cover. The water temperature below Mio is above 70 degrees and near 80 degrees below the Foote Dam. Houghton Lake
