

Advocate for lunch!

Directions: After studying the [evaluative framework chart](#) for advocating for a solution, decide on a "lunch solution" to advocate for in your groups! Consider the population (Saddleback College students) and their needs.

1.Causation

What will the solution do to address the causes of the problem?

Identify specific causes and specific changes the solution will make to add cause.

2.Coverage

Who will this solution help? How many people? Which groups of people?

3.Cost/Benefit

How much will the solution cost to implement?

4. Comparison:

Has a similar solution worked in some other, relevant context? What, where and when?

5. Feasibility

How much time will it take to implement?

How much support does the solution have? Who supports it, or would be likely to support it?

Overall, how **realistic** does the solution seem and why?
