Subject: Letter of Recommendation for J&C Consulting

To Whom It May Concern:

Recently, I and others here at HNTB have worked with the firm J&C Consulting in their efforts creating a three dimensional visualization fly by animation for the California Memorial Stadium and adjacent Student Athlete High Performance Center located on the University of California, Berkeley campus. This has been an exciting process culminating in finished products suitable for publications and marketing efforts by the University. The value of this as a tool is unquantifiable.

The complexity and uniqueness of the project makes it especially difficult to model in 3-D. We use Revit as a documentation tool, but it is not suitable for finish presentation graphics. The expertise required for this type of animation is a specialty. For this reason, we consider the service provided by J&C crucial to creating the graphic realism many have come to expect.

I have found J&C Consulting an invaluable resource and would recommend them to other professionals interested in developing state of the art presentation graphics and 3-D animations. They exhibit professionalism and are steadfast in the pursuit of information and details that result in an accurate visualization of the building as designed. This project also involves a very distinctive existing structure that is a visually familiar stadium structure on campus, so depicting accurately was important.

Sincerely
HNTB Architecture
