During development, it is common to use a master branch. When you are ready to complete your work, you might want to merge your changes into a release branch. To cancel a pull request, you can use the cancel button in your pull request. This will cancel the request and allow the pull request to be closed.

In Azure DevOps, you can cancel a pull request by clicking on the 'Cancel' button in the pull request details. This will cancel the pull request and allow the branch to be merged into the target branch. You can also cancel a pull request by opening the pull request in a new tab and clicking on the 'Cancel' button.

When canceling a pull request, you will be prompted to confirm the action. Once the pull request is canceled, it will be removed from the pull request list and will no longer be visible in the repository. You can also cancel a pull request by opening the pull request in a new tab and clicking on the 'Cancel' button.

You can also cancel a pull request by opening the pull request in a new tab and clicking on the 'Cancel' button. This will cancel the pull request and allow the branch to be merged into the target branch. You can also cancel a pull request by opening the pull request in a new tab and clicking on the 'Cancel' button.
