Logitech setpoint event manager startup

This page extends to information already available for this record in the Pacman Portal Windows Startup Programs database. User selection – Depends on whether the user considers it necessary to identify and disable startup programs, visit the Introduction page. Description: Logitech SetPoint control software for their range of wired and wireless keyboards and pointing devices (mice, trackballs, etc.). Required if you want to use advanced features, change default settings, or get information about low battery status (for wireless devices). Located in %ProgramFiles%\Logitech\Setpoint Startup Information: Common / User Startup (Start → All Programs → Startup) Shortcut Location (XP): C:\Documents and Settings\All Users\Start Menu\Programs\Startup\Logitech SetPoint.lnk Shortcut Location (Vista): C:\ProgramData \Microsoft\Windows\Start Menu\Programs\Startup\Logitech SetPoint.lnk Target: C:\Program Files\Logitech\SetPoint.exe MSConfig (Start → Run → msconfig → startup) startup item (C:\Program Files\Log Tech\SetPoint\SetPoint.exe MSConfig (Start → Run → msconfig → Startup) Startup Item (XP): Logitech SetPoint Startup Item (Vista): Logitech SetPoint Command: C:\PROGRA~ 1\Logitech\SetPoint\SetPoint.exe Windows Defender (Start → All Programs → Windows Defender → Tools → Software Explorer) Name: Productivity Software Shared Files Logitech SetPoint File Path: C:\Program Files\Logitech\SetPoint\SetPoint.exe Log Examples: O4 - Global Startup : Logitech SetPoint.lnk = C:\Program Files\Logitech\SetPoint\SetPoint.exe O4 - Global Startup: Logitech SetPoint.lnk =C:\Program\Logitech\SetPoint.exe O4 - Global Startup: Logitech SetPoint.lnk= C:\Programfiler\Logitech\SetPoint.exe O4 - Global Startup : Logitech SetPoint.lnk =D:\Programas\Logitech\SetPoint\SetPoint.exe O4 - Global Startup: Logitech SetPoint.lnk =C:\Program\Logitech\SetPoint.exe Other Information: File Location: %: %: %: File Location: %: ProgramFiles%\Logitech\SetPoint File Properties Description: Logitech EventMgr Logitech SetPoint Event Manager (UNICODE) Purpose: Mouse/Keyboard Support Program Disable Option: None Shortcut(s) Available: Start Menu Vendor / Publisher: Logitech Inc Product(s): Setpoint Tested: Yes Note: %ProgramFiles% - Refers to program folder usually the path is C:\Program Files Main index Copyright © Pacman's Portal, 2001 - 2020Powered by MalwarebytesAll rights reserved for Privacy Policy Site Map Home Logitech SetPoint is software used to install and control Logitech mice. It contains drivers and software that allows you to take full advantage of your mouse. Publisher Logitech, Inc. Homepage Logitech SetPoint Latest changes - Windows 8 support is added - SetPoint is required for full gesture i support - Double-tap is now supported rechargeable touchpad T650 - Swipe gestures across the top edge Rechargeable Touchpad T650 is now more reliable Other versions logitech SetPoint (64-bit) Reviews SetPoint (32-bit) Plugger Reviewing 6.32.20 (13. november 2011) Setpoint) Setpoint) 4.x forgot horizontal scroll on my LX3 mouse. Instead of reinstalling the V4 th CD that came with the mouse, I downloaded 6.32. I worked well for a couple of hours. Then the click of the mouse had no effect. Skipping the details of floundering around, I alt-tab my tea editor (emacs), and discovered the editor received a recurring keyboard-leftarrow input. The restart caused the problem to disappear for a few hours. I did it many times. Once there was a repetitive imaginary keystroke keypad-right arrow, the second time there was no visible imaginary input. I disconnected the keyboard, which had no effect. I uninstalled the Setpoint V6 and the problem has not repeated several hours running. True, pathology may be in some other software that somehow reaches setpoint data. I'm running without Setpoint, which means there is no horizontal scroll, which is why I bought the LX3. (I have two theories: Windows hates logitech mouse and attacks it. Or Windows hates my IBM keyboard and fabricates fake keystrokes.) jack00810 Reviewing 6.20.64 (August 17, 2011) Easy to use and does what it says. tickleonthetum Reviewing 6.20.64 (December 6, 2010) does not work correctly with my G5 Gaming Mouse ... sheppe Reviewing 6.15.25 (July 28, 2010) I have been using SetPoint and G5 mouse for a few years, and the only complaint I have is that I have not found a way through the SetPoint interface, disable BlueTooth service installs. I do not have BlueTooth devices, so it is useless to me, and yet I can not remove it. Moreover, the software offers good features and functionality (although it is a bit bloated). rip_pit Reviewing 6.10.65 (June 15, 2010) sure it's a bit bloated, but it gives acces some custom & advanced function and control (change in default buttons behavior, etc.) Here's a change from 6.0 to 6.1 : the download size is reduced by about 60%. This is achieved by simplifying the code and removing the device's images from the download package. SetPoint automatically downloads pictures in the background of devices connected to your system. SetPoint 6.1 includes control panels for standard mice and keyboards (formerly setPoint 4.x) and game mice (previously supported by SetPoint 5.x). This reduces the duplication of system components, resulting in a lower overall installation size. The SetPoint control panel for standard mice and keyboards has been updated with a new look. Numerous bug fixes and stability enhancements have been made in The SetPoint 6.1 earthquake10 Reviewing 6.10.65 (June 14, 2010) Well, I have had a wireless MX laser mouse for years with absolutely no problem. As far as The SetPoint software is concerned, XP, Vista and Windows 7 will never need it for my mouse to run perfectly. I also have g15 Gaming Keyboard and 2.1 Logitech speakers. I be upgraded to these G19 Keyboard, 7.1 Surround Gaming Headset and the newest game mouse. So, those who write about Logitech quality just have had bad luck or perhaps like to abuse their property a little too much. I stand behind the quality and opportunities that Logitech products offer (although some, like the G19, come with a premium price tag). Being manufactured in China is not a matter of quality, although I would prefer that Logitech make its products in the Western Hemisphere too. Now I'm curious about all this negative hype over Setpoint software and install it just to see if you negative reviewers are 100% correct. Later, after installation and use ... Setpoint software works just fine with my Windows 7, adds some nice options for my MX laser mouse and wonderfully does not conflict with the G15 software. OvrDriVE Reviewing 6.00.68 (March 3, 2010) just installed this version of the wireless ex-100 mouse/keyboard combo. works perfectly. all the options there. The new look sucks. Otherwise, everything's fine. IamZed Reviewing 6.00.68 (March 3, 2010) Loaded with 64 versions on the second day. By Uberoptions. To get The Uber back, I had to uninstall and recharge the older vrsion. At Sea Reviewing 4.80 (February 22, 2010) This software is probably the worst mess I've ever come across. I bought a 4th Logitech mouse (this time at the G5) after two of the 3 previous Logitech mice became too quickly useless after a short time (all done in CHINA of course) I do not comment on the G5 mouse (I do not like it that much). But who on earth needs that many bytes on your computer, only the mouse !? Worst experience, however, not if you use this mess, but it comes later in the un-installation time. If you uninstall SetPoint by using a good uninstaller REVO Uninstaller, after you perform the setpoint buid-in uninstaller, the Revo program (if you want) searches the Windows registry and also search for left-overs on the hard disk. I've never met that much left in my whole life!! There must be between 3000 or 4000 registry entries left, which must be removed one by one. Keeps you busy for a while. My very old Microsoft roll mouse was stolen because it was a museum piece, but it was still in the works after 20 years of daily use. Compare this old mouse (plug-and-play avant la lettre) with today's garbage stuff made-in-China Logitech to understand what I mean. Given, moreover, the very bad attitudes to what Logitech calls Support (in Belgium), I think I've seen enough. I would give a negative rating (if that were possible), but it's impossible to go lower than one letter here. anonymous cowturd reviewing 4.80 (17 November 2009) from 4.70 to 4.80. Now it's not working anymore. Surprise! Logitech can make a fantastic mouse, but they could not write software to save your life. I rank it in Adobe Reader. Total oversized Logitech Download Assistant is a software created by Logitech that is used to detect new updates when you start Windows. This helps you automatically download and install new updates for keyboards and mice. However, this appearance at each startup is annoying for several users. Uninstalling and disabling it does not change anything on your Logitech devices because it is just a utility for updates. Disabling Logitech Download Assistant What causes Logitech download assistant to start a pop-up? We looked at this particular issue by looking at the different user reports and repair strategies that were typically used to solve the problem by users who find themselves in a similar situation. There are several reasons why this window may appear to the user from time to time:Notifications for new updates — as it turns out; This issue may occur if new updates are available for the logitech device. Multiple users who find themselves in a similar situation have reported that they were able to resolve the problem by disabling the Logitechdownload Assistant startup option or deleting it from the system directory. Proposal to install related software - Sometimes the LDA window appears to suggest a related or optional Logitech software system. To remain as effective as possible, we recommend that you follow the methods in the order in which they are presented. One of them will help you solve the problem in your specific scenario. Method 1: Logitech Download Assistant startupThis is the easiest method to prevent Logitech Download Assistant from opening any system startup. Sometimes an application gets a startup option by default without having to report it. The Task Manager startup map shows all the applications listed to start your computer. You can disable the LDA application when you start Task Manager by following the steps below. Hold Down Windows Key and press R to open Run, now type taskmgr in the text box and click OK to open the Task ManagerSelect Startup tab and find the Logitech Download Assistant, right-click it and select DisableDisa startup option Task ManagerReboot and check if LDA will still pop up at startup or not at startup. Method 2: Disable the Logitech download assistant settingsSome affected users have managed to resolve the issue by turning off the Logitech Download Assistant windows settings. In LDA settings, you can view your Notifications and Actions, if the assistant is available there, turning off notifications will stop this window from displaying for the user. Hold Windows Key and Press I to open Settings, then click on SystemOpen system settingsNow open Notifications & actions and scroll to check the Logitech listI checked and operations ldalf it is listed, you can turn off notificationsNow you can check whether Logitech Download Assistant still appears or not. If this option is not available in your settings, the following method is a permanent solution for the help window to appear. Method 3: Deleting the LogiLDA.dll file in System32 In this method, we delete the LogiLDA.dll folder in System32 to get rid of the LDA window shows at startup. Users also reported that deleting this file did not change or conflict with the main Logitech module. The downside is that you would have to upgrade your Logitech product manually in the future. The automatic update feature is not working. Open File Explorer by pressing Windows + E keysNow locate LogiLDA.dll in the following directory:C:\Windows\System32, right-click the LogiLDA.dll file, and then click DeleteRemoving LogLDA.dll from system32, restart your system, and the LDA window will no longer appear. More.
