

ZIP VERSUS RAR

ZIP	RAR
ZIP is an archive file format created by Phil Katz as a standard format for lossless data compression.	RAR is a proprietary archive format for lossless data compression developed by Eugene Roshal.
It is free and open standard with many implementations and is supported almost everywhere.	It is not free and requires a third-party tool called WinRAR archiver to compress/decompress files.
Comes with built-in support for password encryption.	No password protection settings in built-in ZIP support provided by Windows and Macintosh.
ZIP uses the ZIP 2.0 encryption algorithm which is relatively weak.	RAR uses the much efficient AES-128 encryption.
ZIP files can be created with several programs such as WinRAR, WinZIP, Freebyte Zip, 7-Zip, etc.	RAR files are limited to only one program that is WinRAR. Difference Between .net
