Engineering drawing and graphicsAutoCADCourse OverviewAutoCAD is a prominent area that combines creativity with technical skills. AutoCAD is a 2D and 3D simulation software in which we can create 2D as well as some great sophisticated 3D structure. CAD essentially means computer design or computer development. Before AutoCAD, it was very difficult to create home plans or any other design that required too much manpower and time, but after the invention of AutoCAD, all these issues were resolved because it involves the use of a computer. This is a software pioneer in discarding the difficulty of drawing on a sheet/paper manually. AutoCAD is widely used in the industry. It has different applications in different areas, for example, architects use this software for external and internal design, urban planners use this software to plan schemes and design, mechanical engineers to design vehicle equipment, electrical engineers to wir different types of equipment, interior designers to design and place internal fixtures. The benefits of using AutoCAD: Product Performance and Product Quality Precision and Precision This course will help you learn this software from beginner to qualified level. The main purpose of this course is to develop and polish the planning and design skills. This course has put you on the path of achievement by providing complete guidance on how to become skilled in AutoCAD.Learning Results: Draw and dimensional toolbars you will be able to prepare technical drawings using Auto CAD. their use in the planning and design of housing schemes. Schemes. Keyboard keys. Conversion of pdf drawings into AutoCAD file. A basic understanding of the features of printing and construction.
