Deluge is a free torrent client that has gained huge popularity among torrent fans recently. One of BitTorrent's most powerful customers, which is open source and provides cross-platform functionality, it offers great performance, security, and does well in terms of features too. VersionsDeluge offers a stable version of its client for Windows, Linux and macOS.Deluge version 2.0 compatible with Windows XP, Vista, 7 and 10. It hasn't been updated for a long time, however; not since May 2017, in fact. The same goes for macOS, which works with version 2.0 as well. For Linux, version 2.0.3 is available for popular distributions such as Ubuntu, Debian, Fedora, OpenSUSE, Arch and Gentoo.Since the client does not receive active development support, it is obviously quite unfortunate hope that the official mobile application is in the works. FeaturesWhile Deluge is not quite as well known as some of its key competitors like uTorrent, Vuze or qBittorrent, it packs a whole plethora of features, impressively minimalist design, and quick performance. One of its greatest strengths is that the deluge can be configured pretty much through various plugins. These can be both official and third-party plugins, as well as those specifically designed for browsers such as Chrome or Firefox. Having these add-ons is one of the reasons that Deluge is a great choice for more serious torrent users. Another strength is that Deluge is completely free and open source, as well as ad-free. It is licensed under the GPL, and thus the code can be verified by anyone, which helps make the software safer. Speaking of security, Deluge provides users with an advanced encryption option. It uses strong encryption methods, such as encrypting the flow of messages and encrypting protocols. This is important for promoting privacy and security. Since ISPs can track users visiting torrent sites and stifle their internet speeds these days, such additional privacy settings are helpful. Deluge also offers improved prioritization and selective loading. It can even handle IPv6 and proxy servers to enhance the torrent experience. The command line interface also provides a great option for users who are not happy with the standard GUI or alternative web interface. In addition, the command line provides the ability to connect remotely. (Image credit: Flood) User experience At first glance, Deluge may look simple and a little dated by with other BitTorrent customers like Vuze. However, once you start using it, Flood does the case for yourself with a simple interface and wide features. The huge number of plugins this customer supports makes it extremely easy for the user to get the most out of the deluge. It uses libtorrent to support the backend and provides access to multiple user interfaces. As a BitTorrent customer, Deluge offers a large number of to get support such as email and frequently asked questions in case you have any questions. The official website lists a wide range of installation and use instructions for all platforms. The community also has a helpful moderator forum to help by rounding the support nicely. (Image credit: Flood) Interface Software has a purely laid out interface, offering easy access to the most commonly used options. Even for the first time users will be able to quickly find their way around, and get the software to perform any necessary tasks. As mentioned, Deluge provides several UI options: there's a graphical user interface, a web interface, and a command line. SecuritySince Deluge is an open source customer that transparency contributes to a good level of security. Anyone with an idea of coding can help ensure that the app will not have any dangers associated with malware. A deluge installer's check on VirusTotal showed that it was clean, which is not surprising. However, to make sure you stay safe from any potential problems, it is always advisable to use one of the best VPNs when downloading content through torrents. PiracyWhile torrents allow users to download their favorite content from the Internet, and these customers make the process easier, remember that there are of course copyrighted content on the Internet, and download that breaks the law. Of course, TechRadar does not support or support piracy or illegal downloads. The ultimate verdictIt's impressive plug-in support is what makes Deluge one of BitTorrent's most interesting customers out there. Almost the full breadth of functionality offered by a client application can be configured based on user preferences. In addition, Deluge's client is extremely lightweight, unobtrusive and easy to resource. However, the lack of development of this software is one of its biggest drawbacks. You can also likeHave look at the best free torrent client Torrent Typhoon, the new search engine BitTorrent, lets you search for several large BitTorrent sites in one place. BitTorrent is a file-sharing technology that allows multiple computers to transfer large files in small parts simultaneously while distributing bandwidth, so this is a quick efficient way to download large files such as movies or music. Difficult to track torrent sources have sprung up and have been closed in recent months, so the Torrent Typhoon may be a single stop .torrent store. Like Google, Torrent Typhoon does not host torrents, just looking for sites that Torrent Typhoon Related: Read more about the BitTorrent Rx Refill mobile app (app) allowing veterans to request top-up of their refillable VA prescriptions, track VA recipe deliveries, browse the VA recipe history from the convenience of their mobile device. The app provides a native mobile interface for the Rx Refill feature found in My HealtheVet. Restocking requests submitted through the app or My HealtheVet HealtheVet which are distributed by the VA Mail Order Pharmacy are easily tracked using the App Track Delivery feature. NOTE: THE VA is undergoing an electronic medical record (EHRM) upgrade that can affect whether My HealtheVet and Rx Top-up applications are running at your facility. To learn more about EHRM, visit the www.ehrm.va.gov. For those who don't have a compatible mobile device, web recipe refills can be found on VA.gov or My HealtheVet. Features: Request a Recharge VA Prescription Information View Images of Your VA Medicines View additional VA prescriptions in your package See past supplies of VA Prescriptions Review VA Prescription History Access to additional drug information on My HealtheVet To learn more about VA pharmacies and medicines access to the Pharmacist App Store. Ask the Pharmacist can help you find VA pharmacies near you, understand how VA pharmacies work and learn about the medications you are taking. Request to top up your reusable VA prescriptions, track VA prescription history and access more drug information on My HealtheVet. Access links to my HealtheVet website. Request a top-up of your reusable VA-dispensed recipes. View detailed information about tracking information on each of your top-up requests. Browse your past VA dispensed with medications. The Department of Veterans Affairs (VA) Rx Refill mobile app (app) allows you to request refueling your refillable VA prescriptions, track VA prescription deliveries, view VA prescription history and access additional drug information on My HealtheVet from the convenience of your mobile device. The app works in conjunction with Rx Refill's My HealtheVet feature, and top-up requests submitted through the My HealtheVet app or website are tracked using the app's track delivery feature. To use the Rx Refill App, you must have a premium My HealtheVet account, ID.me, or DS Logon Level 2 (Premium) Credentials. Rx Refill gets access to your EHR electronic medical record and therefore requires secure credentials. If you don't have a ID.me, DS Logon Level 2 (Premium) or My HealtheVet Premium Account, or you're not sure, visit mobile.va.gov/login-information. NOTE: If My HealtheVet doesn't work on your facility, this app won't work. The app has four main features that include: Refillable VA Recipes - Shows a list of your VA recipes that are available to top up. Track Delivery - Includes status by mail VA recipes. Recipe History - Displays additional VA recipes, both reusable and non-rechargeable, including the history of your refill requests. Information about on My HealtheVet - provides quick access to My HealtheVet links. Either from the home screen or from the list of features available on the Navigation Bar, click Refillable VA Recipes. There will be a pop-up of important information, and read the information and click OK. You'll go for a refillable VA Recipes screen that shows a list of VA-added recipes. Click Sort to view the list in alphabetical order using medication either by object or chronologically by dosing date. Click on the arrow next to the top-up on your device or select details under the VA recipe you are interested in refueling and you will go to the Refill screen for details. View the information on the Refill screen For more information and click The Top-up Request. A pop-up confirmation will appear asking if you are sure you would like to top up your medication. Click Yes if you want to top up your medication, and the pop-up confirmation seems to let you know the VA prescription has been successfully replenished. Yes, you can top up a few VA recipes if a few VA recipes are available. You can choose everything under Refillable VA Recipes or choose a radio button next to every recipe you would like to fill. A pop-up will appear and ask if you are sure that you would like to top up your chosen recipes. Click Yes to confirm that you would like to top up your selected medications and a pop-up will confirm that prescription requests have been sent. Not every VA dispensed with prescription can be replenished, such as some painkillers and some drugs. Only reusable VA prescriptions released at VA pharmacies can be requested. Some prescriptions with gas stations may not be able to request a refill, because not enough time has passed, as you last asked for a top-up. To determine if your VA prescription is eligible, check the status. To view the state, either with a home screen or fall down list features available on the horizontal navigation bar, click Refillable VA Recipes. An important information pop-up will appear. Read the information and click OK. You'll go for a refillable VA Recipes screen that shows a list of VA-added recipes. Click Sort to view the list in alphabetical order using medication or by object, or chronologically by dosing date. Click More under the VA recipe you're interested in refilling, and you'll go to the Refill screen for details that will include top-up status that includes: Refillable - an active VA recipe that has a refills left and can be submitted for top-up. Submitted - The restocking request was received by My HealtheVet, but has not yet been processed by VA pharmacy. Recharge in the process - Submitted restocking request is processed by VA Pharmacy. The status of the prescription indicates whether the VA prescription is active, suspended, on hold, expired or unknown. Active - VA recipe is available to fill. If you have gas stations, you can refill this VA recipe if it has My HealtheVet Top-up Status Refillable. Suspended - Active recipe of the VA, which is scheduled to be mailed at the next possible filling date. Contact your VA pharmacy if you need this VA prescription sooner. On Hold - Active VA prescription that won't be filled until the pharmacy decides to hold. Contact your VA care team when you need more of this VA prescription. Discontinued - VA prescription your supplier has stopped. It is no longer available to send to you or picked up in the pharmacy window. Contact your VA care team if you need more of this medication. Expired - VA recipe that is too old to be filled. Contact your VA care team if you need more of this medication. NOTE: This does not apply to the expiration date of the drug in the container. It is not known - Status cannot be determined. Contact your VA care team when you need more of this VA prescription. Once you have requested a top-up of the prescription, the prescription status will change to top up in the process. This shows that your VA pharmacy has received the request and is processing it. Your VA pharmacy packs your top-up and sends it to you at the residence specified in your file. See the filling date to find out when the medicine will be ready to mail to you. The process of filling out the refills request takes about 8-10 days. Either from the home screen or from the list of features available on the horizontal navigation strip, click Track Delivery. There will be a pop-up of important information, and read the information and click OK. You'll go to the track delivery screen that shows a list of tracked VA prescriptions Click Sort to view the list in alphabetical order medications or object or chronologically the last top-up sent. Click more under the VA recipe you're interested in tracking and you'll go for The Delivery Tracking Details Screen. If a VA recipe has been filled and mailed to you in the last 30 days, you will see a tracking number. Click on the tracking number, and the pop-up appears to notify you that you are leaving the Rx Recharge App to go to an external website. To go to an external website, click Continue and you'll go to the delivery service's website where you can see the details of the drug delivery. Either from the home screen or from the list of features available on the horizontal navigation strip, click Track Delivery. There will be a pop-up of important information, and read the information and click OK.
