SIP Trunk and DID installation guide for you TEST FOR FREE Setting PABX to be available on your computer: 1. Connect the power source to the UCM Source-PC input and the display will be ready. 2. Connect the UCM WAN port to your Internet router's Ethernet port. 3. IP will be available on the display of equipment. To access UCM settings, open the internet browser and place the IP available on the device's display. Next, you need to enter the credentials before you can enter the hardware control panel. The default login used is the administrator, and the password is on the label at the bottom of your UCM. Set up a sip account 1. To add a Direct call sip account, go to the menu in the left corner of the Extension/Trunk option, and then click the VoIP Trunks button. 2. Click Add SIP Trunk to start creating a new account. 3. Add the information below (SIPHOST, LOGIN and PASSWORD Directcall are available in email usage instructions). 4. Then click save and then restart in your UCM. Configuration of the entrance route 1. To set up a new input route, go to the menu in the left corner of the Extension/Trunk option, and then click the Input button. 2. Click Add to start creating a new entry route. 3. Choose the desired barrel and then fill in the information below by setting input and the caller's default. 4. Then determine the type of routing and the main destination of the rule. 5. Then click save and then restart in your UCM. Exit Route Setting 1. To set up the new exit route, go to the menu in the left corner of the Extension/Trunk option, and then click the Outgoing Route button. 2. Click Add to start creating a new exit route. 3. Set below what set the outgoing route pattern will be and the level of privilege that the extension should have to use this rule. 4. Then select the barrel that will use the output rule. 5. Then click save and then restart in your UCM. The finished IP PABX is already set up! You can already MAKE and RECEIVE calls, from the test or the final phone number we send to your email. You can dial like this: Including country code and area code and phone (for example. 55 41 3016 0300) (this form is mandatory for DDI connections) Including area code - only phone (e.g. 41 3016 0300) (this form or previous form is required to connect CDD), including only a phone number (e.g. 3016 0300) (this form only works for local calls in the registration code) Customer, on Directcall) The UCM6202 product description is an integral part of the first series of PBX Grandstream platforms to voice over the IP business market for analog network lines (FXO). The entire Grandstream UCM 62xx series guarantees compatibility with any STANDARD SIP device, thus being able to enjoy the maximum and potential of VoIP technology. Dedicated to the small and medium-sized enterprise market, the Grandstream UCM62xx series offers a convergence of voice, video, data, fax and video surveillance. Grandstream UCM 6202 offers two analog network lines (2 FXOs) to connect to the Dial operator and two analog extensions (2 FXS). (Creating extensions, analog trunks, exits and entrance routes). You don't have a Grandstream UCM yet? Click hereWhat is Grandstream UCM6202? The UCM6202 Grandstream 2FXS 2FXO is a complete PABX or PBX-IP centered with installed power for: 1) 2 analog lines (FXO), 2 analog extensions (FXS), up to 30 numbers/SIP accounts (VOIP), up to 500 IP extensions, 30 simultaneous calls.2) UCM6202 Grandstream 2FXO 2FXS, based on open SIP standards, is designed for small and medium-sized businesses. UCM6202 Grandstream 2FXO 2FXS allows its users to enjoy all the amenities previously found only in large equipment. UCM6202 Grandstream 2FXS 2FXO is ideal for small call centers. Highlights of UCM6202 Grandstream 2FXS 2FXO: O UCM6202 Grandstream 2FXThe 2FXS has an automatic response, IVR (Interactive Voice Response) automatic call distribution, call route configuration (local, long-distance, international, mobile and others), waiting for music, expansion groups, waiting for a call, recording a call, dialing remote extensions, identifying calls from porter, conferences and others. Let's go to the setup, then, folks: Step 1 - to access the hardware you need to have a network cable connected to the LAN port, and that you have on your machine the nickname of the network. Gateway Factory IP: 192.168.2.1No Windows: Go to the Network Center and share -- Adapter Configuration Change -- click the assistant mouse button on your local network -- TCP/IP4 Property Protocol -- enter a fixed IP -- from your network -- then tap the Advanced -- enter the IP nickname for access to UCM. 192.168.2.125B Unix distribution: Give command as super user: ifconfig eth0:1 192.168.2.125 netmask 255.255.255.0 upAnother way to exit the cable network at the WAN port. DHCP equipment. It will get your network's DHCP IP and show on your display: Step 2 enter IP hardware in your browser to make first access. User: AdminSenha: It's on the label that is at the bottom of the hardware: Step 3 - We'll create extensions that will be registered in our PABX: Go to -- Expansion/Trunk -- extension -- Click Add. Here you can create your SIP, IAX or FXS account for the two phone ports that you have on the hardware. We're going to create SIP. Did you know that you can create multiple extensions at the same time using the Batch method? This feature is found in Basic Settings -- Select a method of adding -- , just select Batch. In our example, we'll create 10 extensions at once. After you enter the passwords just click: Remember: Every time a change is made to UCM, you need to press the Apply button to save it. Extensions have been created. In Extensions, you'll see the status of your extension. 4th Step - Set up analog barrel. In: Extensions -- Analog Trunks -- Create a new analog trunk (FXO Port) Select fxo ports. Name the trunk name. (Subscriber identification scheme) Choose signage for your line. Note: We use the IE line. Tone Country Change the tone of the dial. Choose Brazil. Just save and click on the Apply 5o Step button - Create a weekend route: In our example, any number dialed will come out with an analog barrel, but at this point you can create a set plan as needed. In: Expansion/Trunk -- outbound routes -- (Call Rule Name) Name your outbound route. No, no, no. Create your set plan. Entering _X_ will link to any number. (Level of privileges) Place the route resolution. In accordance with extensions, you can choose the resolution of each extension so that each extension can use a different output context according to the resolution. Finally, select a barrel that Communication. In this case, it was created in Analog Trucks. 6th step - Creating an entrance route: In this last procedure we will create our entrance route, that is, everything that reaches our analog trunk, which was created at the 4th stage, will be directed to the destination, which in this example will be RAMAL. In: Expand/ -- incoming routes -- select the barrel -- click the default destination button. Here you will choose where your incoming call will be routed. In this example, it aims to expand 1000.!!!!!!! Bonus!!!!!!! Did you know that you can see, in real time, the links that come in and out on your PABX UCM? Just go to: Sustem Status -- active calls In this window you'll see all the active links in your UCM. You can even turn them off if you want by clicking: To download this TUTORIAL in PDF click hereEverything Ready! Until the next textbook.
