Tenant profile

The retired couple, aged 64 and 63, moved in on 10/25/2022. Tenants of our housing stock, the couple lived in a duplex whose rooms were located on the first floor and the lady had great difficulties in climbing the stairs. The family was looking for a single-storey accommodation with a shower because of health concerns.

Tenant's opinion on the quality of the accommodation

The couple is fully satisfied with their rehousing. Home automation has made it possible to control and program remotely all the appliances and electrical devices of his home – heating, lighting, shutters and windows. This helps the daily life of the lady along as she can easily perform different tasks without getting her up from her chair, such as closing the shutters. This is an advantage for the tenant who has lost her mobility, and allows her to live longer in her home.
