ZYXIS ZUNZUN ZW Secondary: FARM GUMSTICK KOBAIN KOKA YOKAY YUYU The second row is the sum of the frequencies of the letters in the first row. For example, the frequency of the letter 'F' in the first row is 8. The frequency of the letter 'M' is 3, and the frequency of the letter 'Z' is 9. The sum of these is 15. The frequency of the letter 'F' in the second row is 3. The frequency of the letter 'M' is 3. The sum is 6. The frequency of the letter 'Z' in the second row is 0. The sum is 6. If we add the two rows together, we get 15. The frequencies of the letters in the entire alphabet are listed in the following table. **Table 16.1.** The frequency of letters in the alphabet The next problem requires a few of the concepts introduced in this chapter. You should be able to solve it using the following techniques: * Find the frequency of the letter 'F' in the input string, and the frequency of the letter 'H' in the output string. * Find the frequency of the letter 'A' in the input string, and the frequency of the letter 'D' in the output string. * Find the frequency of the letter 'C' in the input string, and the frequency of the letter 'M' in the output string. * Find the frequency of the letter 'G' in the input string, and the frequency of the letter 'Z' in the output string. * Find the frequency of the letter 'B' in the input string, and the frequency of the letter 'W' in the output string. **Working... **Solution** The frequency of the letter 'F' in the input string is the number of occurrences of the letter 'F' in the string, divided by the number of letters in the string. For example, there are three occurrences of the letter 'H' in the output string. The number of letters in the output string is 4. Divide 3 by 4 and you get 0.520f8b1ae7
