ABSTRACT

This study investigates the transportation challenges faced by ABM students, focusing on major issues such as bad weather, long travel distances, high transportation costs, and limited access to public transport. These challenges often lead to stress, lateness, and absenteeism, which affect students' academic performance. The findings also show that students prioritize safety and convenience, emphasizing the need for more reliable and affordable transportation options for learners. To address these challenges, it is recommended that schools coordinate with local transport providers, implement flexible measures such as online options during severe weather, explore fare discounts or subsidies, and promote carpooling systems. By implementing these recommendations, schools can help alleviate transportation challenges faced by ABM students. These solutions can help ensure timely and safe travel, reduce stress and absenteeism, and promote a more convenient travel experience, leading to improved academic outcomes and better well-being for students thereby enhancing overall educational success.
