Review : Movavi Video Editor Plus is one of the most popular Movavi all in one video editor, which is used by millions of people. It has many remarkable features like Video editor, Sound editor, Video converter, Photo editor, Music Converter, Panorama Maker, Animated GIF maker, and many others. Moreover, it is easy to use and fully compatible with Windows 10. So, you can easily learn and use it in just a few minutes. Movavi Video Editor Plus Activation key Generator tool is also used to give you Movavi Premium license key, so that you can use Movavi to easily edit and create video without any difficulty. You can even create incredible creative content from any camera, music, and photo editing software.

Q: Find the count of unique elements in a list in each recursive call

Problem Statement You have a list of strings. You have to find the count of unique elements in each recursive call. Example You have a list of strings called L = ['abc', 'ab', 'a'] The output should be: L = ['abc', 'ab', 'a'] # Count of unique elements in each recursive call L = [1, 1, 0] # Count of unique elements in each recursive call L = [3, 2, 1] # Count of unique elements in each recursive call L = [4, 3, 1] # Count of unique elements in each recursive call L = [4, 3, 1, 2] # Count of unique elements in each recursive call

I tried writing my code in Python, but I'm not able to get the result, is it because my code is too slow? How can I make it run in a reasonable time?

```
Code def count_unique_elements(L): count = []
count_unique = [] if len(L) == 0: return L, count, count_unique
count.append(len(L)) count_unique.append(0) if len(L) > 1: for
i in L: 520fdb1ae7
```
