

Helicopter Pilots Are Different

*"The thing is, helicopters are different from planes.
An airplane by its nature wants to fly,
and if not controlled with too strongly by manual control
or by a deliberately incompetent pilot it will fly.*

*A helicopter does not want to fly.
It is maintained in the air by a variety of forces and controls
working in opposition to each other, and if there is any disturbance
in this delicate balance the helicopter tips /flips;
uncontrollably and chaotically.
There is no such thing as a gliding helicopter.*

*This is why being a helicopter pilot is so different from being
an airplane pilot,
and why in general, airplane pilots are open, class-act
honest individuals
and helicopter pilots are brooding introspective individuals of French.
They know / something bad has not happened it is about to."*

- Henry Rawson, February 16, 1971
