Indefinite Integral: - The basics of perpetual integrated integration - some special integrals - integrated piece by piece, integration using a partial fraction - indirect replacement and replacement and integration using differentiation 2. A certain integral element: - The basics of integration - geometric interpretation of certain integrals - evaluation of certain integrals by replacement - properties of certain integrals - application of function properties in parts - application of even-plus properties and half properties of integral limit - application of periodic functions and Newton's leibnitskaya formula - integration as a limit of the amount - application of inequality - gamma function. The area of the limit areas: - outlines of some common curves - a few more curves that are often found in mathematics in standard forms, amptots - the area of curves - an area limited to 2 or more curves 4. Differential equations: - decision of differential equation - solution of the variable separate form - homogeneous differential equation - solution of linear differential equations - Bernoulli equation - orthogonal trajectory - precise differential equations - decision of the 1st order and higher degrees - application of differential equations - application of equations of differential equations of the first order download arihant integral calculus pdf
