Customer problem: I just bought the VIDA Dice 2014D OBD and I use Win7 as needed. When installed, it asks the administration for the right to install, OK, rights, data. Next, the box pops up saying something about skill.exe is not recognized as a team or kind and at the same time another window opens saying that %VIDA_HOME%patchfilldb.cmd can not be found, make sure you have written the name correctly. What the hell is going on? Possible cause: Discs included in DICE units can be a problem. Solution: Solution 1: Download the Vida Volvo software at the following link and install again. Password: 3lr986 Security: Yes, 100% of works cardiagtool.co.uk Engineer Requirements on Computer: It Must Be Windows 7 It Should Be Internet Explorer 8 Computer Memory Needs More Than 2GBRAM C:/ Must Have 40 THE GB Space Software should be set to C:// It should be the format of the NTFS 2014D VOLVO VIDA DICE Installation guide: 1.Run CD-ROM, "install-DVD-Vida_ dvdheader/Main'set up.exe"; Choose languages: EN-GB put it on the list, until then, until all the installations are finished, then restart the computer. 2.After the restart, once the service icon (bottom of the right corner) is available (VIDA Status: Run) , and choose below the crack of the run documents VIDA2014D_patch.EXE, put it on the list and then restart the computer. Video Link: Solution 2: Credit to th Capndirk swedespeed.com forum drives included in DICE units can be a problem. My drive was printed instructions and read me on a drive, and neither worked at all. I noticed in the file system directory on the drive that there were 4 ISO Drive files on the drive. I used the disk copying program to make a mounting disk from ISO, and it worked. I also installed VIDA downloads offered by the wonderful Roxana, how direct WIN 7 installs are and like virtual machine installations, and they all worked with my eBay DICE. The easiest thing for you would be to download a direct win 7 installation file from her thread, and be sure to get the latest EWD patch.exe and files (electric wiring chart) too. The patch allows you to enter the VIDA program. It would also be necessary if unpacking the drive as logins are likely to have expired on them too. I've built a new ISO for those who want to directly install on their systems with updates and my redesigned interface is already applied. It also contains all the necessary files to install whether on 32bit or 64bit and all 3 patches for different installation methods... (32bits, 64bits, 32bits installed on 64bit system) Virtual Machine System Minimum Recommendations: Processor: Intel i3-2100 or Better (64bit required) RAM: 6GB of HARD DRIVE RAM: 40GB of free USB Editions System Minimum Processor: Intel Core2Duo or better (32bit capable) RAM: 3GB of STORAGE DEVICE RAM: 32GB or or or or USB 3.0 (Recommended SanDisk Extreme) Legacy Boot Mode Support (UEFI won't download) Patches, Documents and Walk-throughs can be downloaded from any of the download links below Download Links: Image Download VMWare Player VirtualBox Installer 7-SIP - You need this for direct installations, just download the 2014D Installer file. This file contains everything you need to install, including patches and updates. VMWare Virtual Machine Setting: 1.Download virtual machine 7zip image 2.Download VMWare Player or VMWare Fusion. It will depend on what OS you have working on. 3.If you have Windows but don't have 7zip. Download it. I believe that most Linux distributions support 7z files out of the box or can be easily installed through the Software Center. If you're on a Mac OS, you can use 'Unarchiver', available through the App Store. 4.Once you've downloaded everything, install your hypervisor of choice. It will be VMWare Player or Fusion. Advanced users can use a virtual box with minor changes I believe. 5.Remove the 7z image file that you uploaded to the folder. V0lv02Rule password You can run it from this place or move it to another location. Doesn't matter. 6.Find 'Service Machine.vmx' and double-click on that file. He'll open your hypervisor. You may be asked if you have copied it or endured it. Just click moved. 7.If you want to customize your VM image now, if it's time to do so. Things like the number of cores dedicated to VM and how much RAM you want to be able to use. 8.Make sure you install a USB POSITION to match your car. If you connect DICE to a USB 2.0 port, it should be USB 2.0. If you use a USB 3.0 port. It should be installed on USB 3.0 9.Run it and enjoy. Usb Image Setup: (For more advanced users) 1.Download image from the assembly folder 2.Download USB Imaging Tool.zip file from tool folder 3.If you have Windows but don't have 7zip. Download it. I believe that most Linux distributions support 7z files out of the box or can be easily installed through the Software Center. If you're on a Mac OS, you can use 'Unarchiver', available through the App Store. 4. Once you're all loaded, remove the USB Imaging Tool. 5.Start the tool. Choose a USB drive from the list on the left. Click Recovery. A window will open to search for the IM file. In the bottom right corner is the menu of falling down, change it to compressed (zip) image files. Find the folder you downloaded and select the IM file. Click yes to restore and rewrite the USB drive. 6.Run it and enjoy. Hope this helps you! When the username is entered, the interface will pop up please wait and go to the blank page for a few seconds and then back to the login interface. VIDA 2014D Patch: xpdF0K7Diox5Td5sQdhwBSr2fJ3C6syPeW77ETyT-t3zbUM_5ofM Note: This patch only works for VIDA 2014D; Can't be used for VIDA 2014A Run Patch.cmd and Vida 2014D works as a charm VIDA 2014A patch: 2014A-B-D-2099.zip Unpack 2014A-B-D-2099.zip file on your desktop. 2. Launch 2014A-B-D-2099.exe 3. Installation on C: 4. Reboot and log in to Vida 2014A after the icon turns green. Volvo Vida 2014D and your license expired by 1-1-2018 This fix! Just change it to winrar and run the patch again and everything works! It's the same VIDA patch as always, but edit to activate until 2033 Just run solution 1: (best and simplest) Go to Volvo Vida 2014D crack, but tried and tested version: Never has expiration issues 100% works well with Volvo Dice Solution 2: (need luck) Free download VOLVO VIDA 2014D patch 2030.exe 32bit: (only work on 2014D) ... oUGzhlnKp/view 64bit: (work only for 2014D) ... bMfKodRrs/view Has anyone found a way to make up for a date in a virtual machine? VIDA 2014D expires 12/31/2017 23:59. I've dedicated hardware with a watch installed back in 2014 and no network time and synchronization date. I would like to move it to a virtual machine, but I know it will be a timeout at the end of the year. It was easy enough once I realized that it didn't matter if the virtual machine bios date changes. What matters is if Vida sees that she is changing. All this is done in a virtual machine, not on the host. Install the operating system in a virtual machine, set a password when creating a user. Turn off network time synchronization. Create a batch file with one Date mm-dd-yy command, where mm-dd-yy is a date in the past. Create a task schedule that works when you log in and run the package file. Reboot the VM operating system to make sure the date sticks. If the date sticks, Vida will see the date as an endless day. Now install Vida on a virtual machine. I used Date 01-01-14. Vida 2014D sets up and there will never be a timeout. If necessary, you can now set up a user account to automatically log in. Still done: Get the USB port displayed on VM. Unpack the patch, in the previous installation and find 3 files. filldb.cmd filldb.saj license It's not as easy as you make it sound. If I unpack on C: these files and patch folders are deleted 2014A.exe and 2014A-B-D.exe after the patch starts. If I unpack in another folder, I can get folder and three files. I translated the patch folder to C:\Vida and ran filldb.com from the command line. Got can't find a specific error way. Which would be nice if someone could make a new patch with an edited license file. The 2014A patch has been successfully modified to extend the ExpireDate subscription to 2099 23:59:59. The patch won't let you run 2014D under Windows 10 with IE11. To do this you need more than a patch. Get the attached file. 1. Unpack 2014A-B-D-2099.zip file on your desktop. 2. Launch 2014A-B-D-2099.exe 3. Installation on C: 4. Reboot and enter the View after the icon turns green. 2014A-B-D-2099.zip I have Vida 2014D running native in Windows 10 E11 in real time at VM. Next... Do it on the host like any other app. Thanks to Doublebug for showing where to look. The volvo VIDA link - never expires; February 18, 2016: Alexandra M. Instructions on how to install VOLVO VIDA software on your computer so you can study parts schemes or connect it to your car via the OBDII port to perform diagnostics (with the VIDA DICE adapter) in all Volvo car models from 1999 to 2015 (until 2015.3). Requirements: - Volvo VIDA 2014D iso file or DVD - VIDA 2014A patch (Click here to download) - Internet Explorer 9 or Newer (You can download it here) - Windows 7 PRO or the new VIDA Installation 1. Insert a VIDA 2014D DVD on the player or mount an ISO 2 image. Double-click the DVD drive on My Computer to run Set-up Master 3. Once downloaded, select VIDA All-in-one and click Next 4. Choose the language you want and click Next. 5. Click Next on the selection of the installation folder and then Yes on the License Agreement screen. 6. Wait until the installation process is complete, it will take a long time. 7. On the vida configuration screen, click Save (1). A small box will appear click Close (2). Then tap again Close (3) on the configurator screen. 8. Eventually select No, I'll reboot my computer later vidA 2014A Patch Installation 9. Remove the downloaded VIDA 2014A Patch rar file to the new folder. 10. Open the folder and VOLVO_VIDA_2014A file 11. In the window that opens, click Set. 12. Once the installation has been completed, restart the computer. Volvo VIDA 2014D 13 launch. After rebooting your computer, wait for this icon on the Windows Tray to turn green: 14. When it's green, double tap the VIDA All-In-One icon that's on your desktop. 15. Internet Explorer will open with Volvo VIDA 2014D Entry Screen. Simply fill out one in the username box and click LOG IN. And you're done! Now you can start exploring Volvo VIDA software! Software!
