Create bins in excel

Rebecca loves to share what she knows about alternative medicine, health, humble life, fun, animals, and how to live better! Tips for composting, CanvaWhat is composting? Simply put, composting is nature's way of processing decomposing organic material and returning it to rich, healthy, healthy soil. So we compost to save money, help our gardens thrive, and keep the planet better for everyone by creating less garbage! Composting is an easy way to put organic material into a soil that is no longer full of nutrients. Compost is like steroids for plants and helps them stay healthy and prevent disease. Composting restores vitality and vitality to the soil while avoiding the use of harsh chemicals to fertilize your yard. Even by avoiding the use of chemicals, we cannot prevent all chemicals that come from rainwater; Using less helps everyone. Another advantage is that it is 100% FREE to do! The compost heap is your personal fertilizer company. What are the benefits of compost? This condition and replenishes the soil You can reuse household and kitchen goods that are usually thrown away It reduces landfill waste and garbage It is good for communities, the environment and all on the planet It introduces useful organisms into the soil that plants use to fight disease helps and stay healthy are you currently compost? Cycle compostingCuesa.orgThe Process and How to StartLet suggest that you have a great yard to start composting the pile. If you don't, or you find that it's too much work, you can buy a composting bin, or make your own! Start a pile of compost on bare ground. This allows worms and other beneficial organisms to aerate the compost and eventually be moved to your garden (s). Put a few branches first, 2-4 inches deep. This provides drainage and helps keep the air moving and flowing through the pile. When adding compost, do this in layers, alternating between dry and wet/wet objects. Wet ingredients food waste, sachets, algae, etc. Dry materials - straw, leaves, sawdust. Next add manure, by which I mean green manure (clover, buckwheat, wheat grass) or any source of nitrogen. This activates the compost and accelerates the process of its decay. Sometimes water a heap or let the rain do the job of a cover pile with anything you have. The tarpaulin, a piece of wood, scraps of carpet are also in order. Covering the heap retains heat and moisture, and prevents the pile from getting too wet. You want and need some moisture, but you don't want to end up with a bunch of soaking up smelly trash. Over watering will cause heap of rot. And finally, turn and rotate the pile every few weeks with a shovel or pitchfork. Rotating the pile is essential to keep the air moving, the compost must remain oxygenated. Which should and should not be composted. Tips and SuggestionsA compost heap should have more carbon than Too much nitrogen will make a bunch of stink like a huge pile of garbage, and I doubt you'll want your yard to smell like that! Carbon will make the bunch have a pleasant smell. If you doubt what is in your heap, add more carbon material! When you can, make all the pieces as small as possible: cut, grind, break, break. All elements should be cut into the smallest pieces when possible. This allows nature to break down elements faster and speed up the decomposition process. The biggest pain and nasty work with composting is spinning a pile. If you want to cut on this, add more material like straw and twigs. Harvest fresh compost from the bottom when added to the top. Turn this stock! Compost is designed as an additive to the flowerbed, you still need manure and dirt. Compost is rich in nutrients and should be considered as an organic fertilizer. So don't make a compost pile and think you'll just grow things in it, it doesn't work that way. Carbon-rich materialCarbocarbon material can be composted Following lists of carbon materials that you should use when composting for your garden (s): Bush leaves scraps from pruning pine needles or hay (avoid high pages of glitter, or paper with colored ink) Shredded paper Corn cobs (sliced or crushed into pieces) Shredded cardboard wood pellets Dryer (from natural materials like cotton) Sawdust nitrogen rich materialNitrogen Material can be CompostedTable scraps (no meat or bones) Fruits and vegetable scraps of Grass cuttings Klever Buckwheat Wheat-Grass Garden Prolems Coffee Grounds (filters can be added too) Flowers (stalks

and stems) Tea leaves algae Other items to consider When composting these items, keep in mind ... MORE Carbon, Less NitrogenEggshells (Neutral Item) Paper Swipes Pet Hair Sticky Post It Celebrates Popcorn, Popped or unpopped Old Spice Matches (tree or paper) Old dried grass Paper Towels Potato peeling stale bread (unless birds get it first!) Room plant pruning peat moss Tissue Stale Chips Tobacco Waste Old Pasta (stagnation when it wasn't cooked) Tips (cotton and cardboard sticks) Byalmer Clay Animal Cleaning Cells (Hamster , bird, guinea pig) Peanut shells Cooked rice finger and nail clippings Shrimp, crabs, and lobster shell Pie Peel Onion Skins Fruit Peel (watermelon, cantelope) Apple Kernel Razor and shaving these!) Purchase receipts Pencil shavings Cardboard toilet and paper towel rolls This content is accurate and true to the best of the author's knowledge and is not intended to replace formal and individual advice from a qualified professional.© 2013 RebeccaCommentsThelma Alberts from Germany and May 20, 2014:Wow! I never thought I could put cooked rice in my compost heap. Thank you thank you the advice you gave here. Voted this up and away. Alize-Avon on July 11, 2013: It was a really clear description of how to make a good compost pile. I've read about different methods, but it's a nice, simple recipe if you have a yard for it- we have to take a different route as we rent, but I'll file this away for later use.) The lists have been particularly helpful and I can use this information now. Voted and useful. Rebecca (author) from the U.S. May 22, 2013: Hi Maren, I have never tried to compost any particular seed. But the components of the compost heap are unlikely to allow the seed to germinate. The seeds are organic, so yes... toss'em on in! Maren Elizabeth Morgan from Pennsylvania May 22, 2013: Do the herb seeds survive in the compost heap? Rebecca (author) USA May 21, 2013: It's worth it! :) I hope this motivates you. Thanks for your comment. I appreciate it. Faith Payne from the U.S. May 21, 2013: Composting is something you wanted to do for quite something... But there were delays.. Voting if you're looking for a way to keep your trash cans comfortable and organized, but aside, this smart recycling bin cabinet is doing its thing. Over at IKEAHacker, they highlight how one German reader hid their trash cans while creating a smart closet for their kitchen. He lives in the apartment and the space was tight, so the best way to have trash cans handy, but out of sight was to take some inexpensive IKEA components and make hidden storage areas recycling: We took the Akurum closet with Applad doors and pens to fit our Ikea kitchen. Put the countertop, which is also used in the kitchen and cut two round holes in it. As a roof we used some wooden food plates, which Ikea sold in the summer and added Ikea door handles. In order for the lids not to fall through we cut holes at the top of the Akurum about 2 cm less than one in the countertop. While those of you with spacious suburban garages may not be running to build a bin-stashing counter any time soon, for city dwellers tight enough on space it's a smart use of space. Is your own way of dealing with the basic part of recycling without sacrificing the bottom of the pantry or the cupboard for recycling bins? Let's hear about it in the comments. Recycle Bin Solution (IKEAHacker) Given the huge number of banana peels my family goes through in a week, I decided to start composting with kitchen compost. But I speak from personal experience when I say that not all compost bunkers are created equal; the one I used was buzzing with fruit flies for days. If you're ready to start composting outdoors or you are looking for a countertop option, the best compost bins come with ventilation you need to keep the smell and pests away. The size of the bunker is also important to consider that you will get one that can keep up with your organic waste. Below you'll find a handy guide to two types of compost bins: indoors and outdoors. Some people may find that the indoor bucket works comfortably to deliver waste to an outdoor structure. Indoor Compost BinsIf you live in an apartment or you are not ready to go full-blown with a large outdoor bin, indoor compost bins can be the perfect solution. Here are a few quick things to keep in mind: Capacity: Indoor bins range in size from ultra-compact to industrial family size. Normally, you may only need a 1 gallon (or less) bin if you live alone or in a family of just a couple of people, but if you are a large family generating a lot of food waste, look for one that is between 1.3 and 15 gallons. Most of the options you find online tend to be about 1.3 gallons. Ventilation system: Choosing an option with vents and charcoal or carbon filter will help keep odors from irresistible. Carrying out and cleaning: Look for bins that have handles for easy to wear, whether to your cooking station or outside to your permanent bin (or to the side of the road to collect). You can also spring for lining bins with biodegradable compost packages for even easier cleaning. Aesthetics: Bins come in several styles - consider something that will fit at best with the decor or if you want it hidden altogether, as with the shell-mounted unit. Open BinsThere compost are three types of outdoor compost bins to consider, and since the level of commitment for each varies, it is important to find the right one for you. Stationary: Also referred to as continuous composting, this style requires most yard space, but it tends to toss it up and forget it. You can compost yard trash, garden materials and kitchen waste, but know that every once and for a while you will need to give it an outflow by hand. Look for models that have good air holes for ventilation to keep the smells away - and dark, UV-resistant plastic options will capture heat well (which will help fuel the decomposition process). Tumblers: Often referred to as party composting, this method is fast but requires frequent rotation and you should be prepared to create the right compost mixture to begin with. However, these units are perfectly served in smaller open spaces. Two-room options will allow you to add fresh scraps to one side and the other side of the composts continuously. If you are interested in making compost tea, make sure your vessel comes with a tea collector. Vermicomposters: If you are not outraged with worms doing the dirty work, vermicomposting is a highly effective method of composting, can really be used indoors or outdoors, and is usually less smelly. However, you should make a commitment to keep the worms healthy, be careful not to give them too much or too little food. Best indoor compost compost Overall BestUtopia Kitchen stainless steel compost BinAmazonBacked over 4500 Amazon reviews, this sleek, durable stainless steel bin is compact enough to fit on your counter, but can still keep 1.3 gallons worth of food waste. The built-in (my) coal filter and upper vents make things fresh, and the carry handle makes it very portable. Note: You get one replacement filter with your purchase, but several reviewers have mentioned that you have to replace the filter every couple of months. It is best to wash this box by hand. Useful review: ... It is used daily, mainly for coffee grounds, but it also gets banana peel, orange peel, apple core and eggshells regularly. There's absolutely no smell, the lid is off and on easily and it's great for carrying the outside of the large heap of compost we have for our garden. Very good, very durable, and goes nicely with other stainless steel/nickel fixtures in our kitchen. 2. Stylish version, made from eco-friendly BambooBamboozle Indoor Food Compost BinAmazon If you want a compost bin that is as functional as it is adorable, consider this indoor composting bin from Bamboozle. It is made from an eco-friendly, safe bamboo dishwasher and comes with a cute handle for easy to wear. It has top vents of ventilation and comes with two charcoal filters, each of which will last about two months before needing to be replaced - when that time comes, replacement filters can be purchased on the brand's website or at a local hardware store. Useful review: I love this little compost bin. I used an old plastic ice cream container for my kitchen waste, but it looks pretty good on the counter. [...] The mold is placed right in the corner on my countertop and the charcoalfilter works great to prevent any odors, even onions. I love that it is made of eco-friendly bamboo, it cleans easily, and the soft beige color is mixed with my kitchen. 3. Affordable hanging bin that fits under the SinkKaryHome Kitchen Compost BinAmazonIf space at a premium, this budget-friendly compost bin can be easily installed under the kitchen sink with an included mounting accessory. This choice is the only indoor option on the list without a carbon filter/charcoal, but the idea is that the bin is out of the way to let the pests stay at bay, and as one reviewer pointed out: Easy to remove and landfill and does not allow the smelly smell to come out. It can be used with or without removable bags. It is made of non-toxic plastic and comes with a handle for easy to wear. Useful review: Super happy with this purchase, we have a very small galley style kitchen and it's The size of the compost bucket, I love that there is a catch for the liner from falling into the container. Thinking about ordering a second one for our trash bath! Best outdoor compost bunkers 4. Double Tumbler Camera That Fans LoveFCMP Outdoor Tumbling Tumbling Tumbling With over 1,500 Amazon reviewers giving this block the perfect five-star rating, you can be sure that you are getting a durable outdoor composter in this two-camera model. It is made of dark-colored polypropylene plastic, which is then mounted on a sturdy galvanized steel frame. The brand says that by turning it five to six times every two to three days (under the right conditions), you could compost in just two weeks. It comes with adjustable vents for optimal aeration. The only drawback: It doesn't come pre-assembled. Useful review: This device is a barrel divided into two halves separated by a hexagonal wall. It revolves around the axis, so there is no need to use a pitchfork or shovel to turn on the composting ingredients. [...] All I have to do is roll it on the axis, and the contents get mixed up nicely. There are air holes on both sides that can be moved shut down. There are also built-in water drainage holes between the hexagonal straps, so the contents are perfectly moist and never damp. [...] It's well done, a little tricky to assemble, but the plastic is resistant to sun damage. I have to last for years. Spinning a barrel by hand is a good workout. I really like this composter. [...] 5. THE UV-resistant stationary composter That's A Cinch To Set UpRedmon 8000 Compost BinAmazonThis at an affordable price a continuous composter is made with UV-stabilized, durable plastic, which, as one reviewer noted, is much more durable than a plastic dumpster. This will require assembly, but instructions are included and no tools are required. It comes with aeration holes (in two different sizes) on each of the four ventilation panels, and it has doors on each side to easily get the product ready. The binding cover provides a reliable seal. Useful review: I like access from all four sides! It's a big composting bin. Easy and easy to use. 6. Stackable Worm Composter with Tea Collector Tray SquirmThe Firm Worm Plant 360 Worm Composting BinAmazonIf you decide that vermicomposting for you, this worm farm starter kit has what you need to get started with ease, including bedding material, thermometer, and handy infographic magnet that kitchen waste is safe to feed your worms (although the worms themselves are not included). It comes with four trays, but expands to eight trays if your composting needs increase (these extra trays are sold separately). Made from high-quality recycled plastic, it comes with a built-in tray collector to make compost tea. Although it can be used indoors or outdoors, Safe to use in temperatures of 40 to 80 degrees Fahrenheit, according to the brand. Useful review: The worm plant was very easy to set up; there were no problems with the breakdown and it seems pretty sturdy. You don't need to do any build, just fold the pieces. Teh Teh The book is well written and useful. Included supplies to create a factory are great to have. [...] There's no smell at all, at least not until now, and the book describes how to avoid or fix it if it happens. So far, so good!
