Each chapter is preceded by a short preface and has a table of contents followed by chapters of different length. The first chapter is devoted to the kinetics of mass transfer, the second to the kinetics of mass transfer, the third to the diffusion model and its various applications, the fourth to mass transfer in magnetic fields, the fifth to the most common experimental techniques for measuring mass transfer and diffusion coefficients, the sixth to the applications of the diffusion model to industrial problems, the second to the kinetics of mass transfer, the third to the diffusion model and its various applications, the fourth to mass transfer in magnetic fields, the fifth to the most common experimental techniques for measuring mass transfer and diffusion coefficients, the sixth to the applications of the diffusion model to industrial problems, the seventh to the thermodynamics and kinetics of isothermal adsorption, and the eighth to the theoretical and experimental investigation of the effects of the agitation rate on adsorption. Release of tritiated 5-hydroxytryptamine from synaptosomes of rat cerebral cortex. This report shows that rat cerebral cortical synaptosomes (SE and CS) are distinguished by their relative content of 5-HT. The amount of 5-HT associated with SE increases after stimulation. These data are compatible with the existence of two types of 5-HT transport sites in the rat cerebral cortex. Q:

How to count numbers in list I want to count the number of each word in the sentence. For example: sentence = "Hello world!" Return: ["he", "lo", "ro", "or", "do", "al", "lo
