Support Usif you have had any problems with the app, instead of giving us a lower rating, please give us your queries, questions or suggestions. We'd love to solve them for you :) If you like our app, feel free to rate us and share among your friends. The new Splash ScreenNew File ManagerNew Navigation Drawer with the history and setting of screensNew Material designAndroid 10 full supportBug Fixes Offline HTML HTML Viewer is an easy and portable program that allows you to view HTML pages in an offline environment, as the name says. It is targeted at all types of users, even those with little or no experience in software applications. Because installation is not a requirement, you can simply opt out of the file that is running anywhere on the hard drive and run it immediately. Otherwise, you can save offline HTML Viewer on a USB flash drive or similar removable device, and run on any computer. So you can keep the tool in your pocket when you are on the move. More importantly, the program doesn't deal with the Windows registry section or leave files on the hard drive after it's removed. The utility interface is made from a regular window with an uncomplicated layout, where you can open an HTML item only with a file browser, as drag and drop is not supported. In addition to viewing the contents of the page in the main app window, you can zoom in and out, copy text on Clipboard, use the search function when dealing with large amounts of data, change the size of the font and choose a set of characters. In addition, you can open an HTML page in Internet Explorer from the Tools menu, as well as make file associations. Offline HTML Viewer is not a problem for your computer's overall performance, as it uses a very low CPU and system memory. He is very sensitive to key strokes and mouse events. Throughout our assessment, there were no errors and the tool did not freeze or crash. Although recent updates have not been made, offline HTML Viewer can be easily used by less experienced people.
