(3.3 Mb) The new themes will be a little slower to download than the old ones, but they will also be more stable and less likely to crash your computer if you run a more recent version of Windows. Hey guys, First, I'd like to thank one of our top players for being a part of the team. The season just keeps getting better and he is a great example of just what a player can do with some help from the other team members. He is one of our top 6, and we're not only looking for players like that, we want to offer him that chance to join us in our League. This is a chance for him to have a big impact on our team, and be a big part of the success of the league going forward. If you guys think this is something you'd like to be a part of, please send me a PM in game or on Discord with your in-game name and your steam ID to play@pintballleague.com. Anyways, this league is going to keep going and our wish is that people like this will be able to join us. So go ahead and reach out if you think you can be a part of our community. Q: SQL Server Can not Insert because Table has non-nullable column I am trying to create a generic table in SQL Server 2017. However, whenever I try to insert a new row with a nullable value for my key, it's throwing an error and does not insert the row. The error is: The INSERT statement conflicted with the FOREIGN KEY constraint "FK_Unknown_0_00001D_6BE9". The conflict occurred in database "Jigsaw", table "dbo.Table_Unknown", column 'Key'. The statement has been terminated. I tried it without using key and without the key constraint, but it's still throwing the same error. I am using a created-table-as if it was a view. CREATE TABLE Table_Unknown (Key INT NOT NULL PRIMARY KEY, Data VARCHAR(100) NULL, CONSTRAINT FK__Unknown_0_00001D_6BE9 FOREIGN KEY (Key) REFERENCES Table_Unknown (520fdb1ae7
