## Dr morepen glucometer manual

Image Not Available For Colour: Home Products - Dr. Morepen Glucose Monitor (GlucoOne BG-03) 1,690.00 Kit Includes: Dr. Morepen GlucoOne BG-03 Glucose Monitor Blood Monitor Lancing Device 10 Lancets Battery (CR-20 32) Plastic Case 25 Test Strips FREE Features: No coding technology 300 Memories 7.14 and 31 day Average Small Blood Sample Alternative Site Testing AVAILABLE ON important information Readings from glucose meter only for general information purposes - they are not a substitute for a medical examination from a registered doctor! Discuss your results with a registered doctor. Never use results to make medical decisions yourself. Seek prompt medical care for the medical issues you have. Consult your doctor before making changes to medications, diet, fitness program or blood glucose testing schedules. Go to the contents of the Basic Features of Dr. Morepen Gluco One BG 03 Glucometer: - Memory: Keeps 300 results with date and time - Easy-To-Its is used: Easy three-step operation. A free band system and only 0.5 ml of blood is required - Fast and accurate results: the meter requires 5 seconds to measure and provides blood glucose levels and has an accurate and ergonomic model. The result averages get 7, 14, 21, 28, 60, 90 days on average to see trends. - Smart: A large display as well as sleek and ergonomic. It has the advantage of an alternative testing site - Test Range: 20-600 mg/dL (1.1-33.3 mmol/L) frequently asked questions on this item question-What needs to control blood glucose (blood sugar) levels in the body? Monitoring blood glucose levels is important because it provides a valuable detail to a person so that he can manage his blood glucose levels on a daily basis. The question is- Is this device reliable for self-control of blood glucose levels? Yes, this device is reliable for self-control of blood glucose levels in the body. The internationally recognized standard blood sugar error of the glucometer is 10-15%, or about 10 mg/dL up or down from the standard value. The question is: How to check whether the glucometer is calibrated or not? Typically, the glucose test strip comes with a unique code, so the first step is to turn on the counter and check whether the code on the test strip is the same on the glucometer. If the codes don't match, this indicates that the glucometer is not calibrated. The general procedure for calibrating the glucometer is automatic or manual? If the code mentioned in the test strip does not correspond to the code mentioned on the glucometer, it should be calibrated using the following procedure: 1) Manual meter: - If the meter is used before, there will be an encoding number. code number on the test strip label and insert the strip into the counter and enter the code number in the counter, moving moving or arrows 'down' to calibrate it. - If the glucometer is new, rather than coding number, there will be a dash. 2) Automatic meter: - Turn on the blood glucose counter by pressing the power button - Open the meter and insert the test strip and close it - then the counter will now be calibrated question - Is there a difference between checking blood glucose with a glucometer and out of the lab? The value of the glucometer gives an estimate of the blood sugar level of capillaries, while laboratory value gives an estimate of blood sugar levels in venous blood. In capillary blood, the amount of glucose is lower compared to venous blood, so the difference is slightly increased for the reading of the glucometer. The question is how often should a diabetic patient check blood sugar in case of other diseases like any infection, fever, etc.? In a diabetic patient, such problems can get complicated easily, in this case, the anti-diabetic regime should not be discontinued. Blood glucose levels should be checked more often, and if serious problems such as recurrent vomiting, problems in eating orally orally or unstable blood glucose levels (high or less than 70 mg/dL) begins to occur, then immediately visit a doctor. How often should I control an elevated dose of the drug/insulin by your doctor? After increasing the dose, monitoring should be done more often to avoid any critical situation. Especially in the case of initiation of a new drug or multi-drug therapy with insulin. The question is, can I use one blood glucose test strip more than once? It is recommended that the new test strip should always be used for the test. The question is - The battery of the glucometer can be charged or needs to be replaced? The glucometer battery needs to be replaced. Click to chat! X Ratings and Reviews5Best Price accurate measurement I got this product on the factbook because I read other people; review and so far it's the best I've ever got regarding my health stuff... It helped me guide me to the suger level and now I'm healthier. Thanks to FLIPKART! I will recommend to buy this product, you can not get the same price at the local store ... just try it and you'll see. flipkart is the best guys to keep it! READ MORESunday ADULOJUCertified Buyer, HyderabadMar, 20145Resto recommended. Perfect accurate result. May d it shows only 1 or 2 units diff than testing in the hospital. worth your money. Thank you flipkart and Dr. Morepen. READ MOREAniruth GirishCertified Buyer, CoimbatoreJun, 20185ExcellentAccurate reading, easy to use, thnx Flipkart to deliver quickly in lockdown situations. Good packaging. It is recommended for all diabetics to check sugar levels at home. READ MOREsanjay naikCertified Buyer, Sundargarh4 months ago4Pretty goodExcellent product. I am its for my father, the test result is almost the same as the result when tested in the lab. Teh Teh Product and other accessories such as stripes, lancet very low cost as it is compared to other similar products of the company. Thank you FKREAD MOREAnuj AntonyCertified Buyer, Ernakulam10 months ago4WonderfulThis is by far the cheapest BSM I've seen. The use is pretty similar to all available on the market. Accuracy is also very close to actual tests. I especially conducted post and PP tests simultaneously using the same blood that the technician drew - the result is within 5-7% of the test results. The build quality of the device is a little unconvincing - a little because of the price factor. Specifically, the lancing device - you can actually

break its bottom by just clicking... READ MORERaibatak BandyopadhyCertified Buyer, Faridabad4 months ago5Sumah! High value for money. Glucose readings may not be 100% accurate compared to laboratory readings. However, Dr Morepen is a popular brand with bands also available at a reasonable price. I am happy. Thanks FlipkartREAD MOREVenkatesan G VCertified Buyer, Chennaiyan, 20191It product does not show accurate ratings. I bought this product for my father looking at the comments and brand. The morning before eating I checked my father's sugar, it showed as 350. So we went to the doctor and checked the sugar again. The doctor's reports indicate 280. When it comes to medical equipment they need to be accurate or at least about 10 times the difference. READ MOREFlipkart CustomerCertified Buyer, Colvale3 months ago1UnsatisfactoryReading is not the right first time shows 308 with 10 sec shows 232 as possible. Don't buy this from online to buy only from a registered medical store and the preferred brand accucheque is a much accurate readingreadreadREAD MOREUdayan SarkarCertified Buyer, Jalpaiguri District2 months ago5Perfect product! Four stars for the machine and its accuracy. It's very convenient and easy to use. Another star for the gesture expressed by the seller. The seller of 'PAWAN ENTERPRISES' added a short message wishing the welfare of me and my family health. Kudos to the two-day delivery. Satisfied with the purchase. READ MOREManav ChowdharyCertified Buyer, New DelhiMar, 20195Brilliant! was looking for this for my dad. The ones that are available on the market are quite expensive. It's the perfect product. I did what I did. Very easy to use and the results are still good and satisfactory.
