If you've limped with a cracked, crumbling road for many years, asphalt can only be material that is needed for a flexible, cost-effective and fast new driveway. Note that this is not the same as the asphalt driveway sealant, which is the coating used to upgrade the existing asphalt. Asphalt is one of the most popular driveway materials, along with concrete, and it offers reasonable durability at a price for the middle of the road. Asphalt entry material is similar to what you see for road crews on the roads. Also called a hot mixture or hot mixture of asphalt, it is a whole of stone and sand, along with asphalt slurry, resin-like materials made of oil. The asphalt is heated to more than 300 F to liquefie it. Asphalt contractors must work with it quickly until the mixture hardens. Hot mixture is not an entry sealant or crack sealant. It is only a surface treatment repair or upgrade worn asphalt driveway. Some asphalt patched substances are similar to a hot mixture, but are not heated before use and heal otherwise from the hot mixture. While homeowners can repair or pass the asphalt driveway, installing a new asphalt paving doesn't do-it-yourself work. There are several factors that make asphalt a desirable option for a new driveway. Flexible: asphalt is more flexible than concrete, so it is less prone to cracking. Cheaper: asphalt paving is usually cheaper than concrete. Hardier winter conditions: It's less likely to damage stone salt and ice melt. Faster setting: the asphalt develops faster than concrete, as it hardens by cooling rather than salting. DIY Fixes: When you eventually need to resurface your asphalt, you can do it yourself with a driveway sealant. Concrete can not be resurfaced by do-it-yourselfer. On the flip side, asphalt has some drawbacks compared to concrete: Lower resale value: Compared to asphalt, concrete usually has a higher perceived value for home buyers. Uneven edges: If you don't install a concrete edging to keep a hot mixture, the edges of the asphalt driveway tend to be less than perfect. Plants: Although not a common phenomenon, some plants can force through asphalt. Bamboo is one such plant. The entrance of the asphalt is as good as its basis. Asphalt, installed in an unstable base, can quickly cause problems. There are three main options for base installation: Install paving through an existing driveway: If your existing driveway is in good condition and is not very cracked or crumbling, a hot mixture of asphalt can be laid directly on your driveway. One focus is height: Make sure that fences, garage floors, and other structures will not affect the higher level of the new surface. Remove the old driveway, pave the way on the soil: The existing driveway is full (or you may even have an existing driveway) and a 4-6 inch hot mixture of paving laying is laid directly on the soil. Remove old old ones paving according to the common base: This is the most appropriate method. The common stone base amends some hot asphalt mixtures. Typically, 6 to 8 inches of aggregates go under 3 inches of asphalt. Once the main preparation is finished, the average entry can start to look like the final product is in just 40 minutes. However, more time will be needed for compact asphalt. After that, the asphalt must harden. Under many conditions, you will be able to drive on the driveway in two or three days, but asphalt treatment can take 30 days or more. During that time, you can use the driveway normal, but you should be careful to avoid scuffing surfaces with car tires (turning too sharply) and other common causes of damage. Hot mixture of asphalt pavement depends on warmer temperatures in working conditions. This means that spring and summer are the best seasons of installing an asphalt driveway. The colder the air temperature, the less time the asphalt paving crews have to work with the asphalt. Crews need time to get the asphalt across the entire driveway. If they don't have enough time, your driveway can be bumpy, uneven, or irregular, or the project may even get completed. Although it depends on where you live, winter is not a good time to install the driveway asphalt. The thickness of the pavement is another factor. The more asphalt you are dealing with, the more freedom you have. For example, at 40 F, the crew has only 16 minutes to work with 1 1/2 inch thick asphalt. But as the depth of asphalt grows to 3 inches, there is also no working time: 46 minutes. Usually, thin applications of asphalt (about 1 1/2 inches) you will want to wait until the temperature is 70 F or better. From 50 to 60 F you will need to consult your contractor. The hot mixture still works during this period, but the time is limited. Go to the bottom if you want to know where The Usual Suspects or Pond Dogs came from, look no further than this heist-gone-wrong film, John Huston's greatest noir thriller, released in a fine new print. Adapted from Wr Burnett's pulp novel, he assembles a motley bunch of Midwestern hoods for a perfect \$1 million diamond robbery, including Sterling Hayden's hulking hardman, the inimitable Sam Jaffe evil mastermind and Louis Calhern's duplicitous lawyer (Some sweet girl, he croons wistfully at the angel on the couch, and youngs Marilyn in his first part). The thrilling and tautly directed - long robbery scenes are exemplary - is moody in a dying frame, highlighted by Harold Rosson lighting garbage-filled back-alleys and semi-illuminated clip joints and Miklós Rozsa's haunting theme music. But while the malaise and moral corruption she describes acts as socially deeply as any of Fritz Lang's noirs, it's Huston's and his attention to character, the villain's thwarted professionalism and, albeit misguided, ambitions that deepened him, ensuring a pastoral end of pathetic force and emotional shock. Posted at: Tuesday October 31, 2006 Home to most loyal and passionate Microsoft fans, Windows Central is a new generation of destination news, reviews, tips and purchasing recommendations for Windows, PC and Xbox ecosystems, products and accessories. Advertising, sponsorship, licensing, reprinting, and permissions If you are interested in sponsorship or advertising opportunities in Windows Central, fill out this short form. To reprint and license the logo, please contact our licensing team licensing@futurenet.com. Windows Central Team Zac Bowden, Senior Editor Source: Windows Central Zac joined the Windows Central team in 2016, and its main goal is to give you exclusive coverage of Windows worldwide on computers, tablets, and more. He began writing about the leaked Windows 8 builds back in 2011, which eventually led to the creation of a popular build walkthrough video series on YouTube that deeply dives into the upcoming features Microsoft had yet to report. He is also an avid rare device collector, as well as not releasing or canceling Microsoft's prototype devices. He is one of the few people in the world who owns the Surface desk in his home, uses the Surface Mini for notes for mea dining purposes, and at one point even used Lumia McLaren and Microsoft Band 3 as their everyday phone and smartphone. Matt Brown, staff writer Source: Windows Central Matt began his time at Mobile Nations in 2016, further increasing Windows Central's coverage on Xbox One and Windows computers. It's designed for written features, how-tos and other game coverage, deeper diving into Microsoft's Xbox platform along with the software and accessories that came with it. And against the backdrop of art and graphic design, Matt finds the creative side of any project. While since writing, Matt catches on to the release of the latest games, or explores the creative side of art and music. A UK-born and bred and naturally tea enthusiast, he now lives in London. Read: Matt posts on Twitter: [@mattjbrown](https://twitter.com/mattjbrown) Mail: matt.brown@futurenet.com Jez Corden, Xbox editor Source: Windows Central Jez joined Windows Central in 2015 as we sought to further expand our Xbox offering. The enthusiastic Lumia and Surface user Jez discovered the advantages of the Microsoft ecosystem through Xbox, which gradually switched to convergence under the Windows 10 universal Windows platform. When Jez isn't writing about games, he's most likely playing them on Xbox. His favorite Xbox franchises include Mass Effect, The Witcher, Warcraft, Resident Evil, Battlefield, and Deus Ex, with a side order of Overwatch. Say hi to Jez on Xbox Live: Jez. Read: Jez Twitter: [@JezCorden](https://twitter.com/JezCorden) Mail: jez.corden@futurenet.com Richard Devine, review editor Source: Source: Central Richard first joined the Mobile Nations back in 2011, responding to a Twitter ad from Android Central looking for another British who filled the ranks. Having worked on all the features of the Mobile Nations at some point in the year, he found a Windows Central home that goes into all kinds of hardware and games. Richard comes from one true Lincoln (no, not Nebraska), and never really moved away. Away from work day, he likes yelling at total strangers on Xbox Live, flying drones and one day finding enough money to go racing again. Rich Edmonds, staff reviewer Source: Windows Central Rich first started mobile nations in 2010 after effectively enticing Executive Editor Dan Rubino by email. Growing up with Windows Central as the site eventually became what it is today, Rich now creates content covering all things on pc — be it games, hardware, water cooling or software. Before joining the MoNa squad, Rich was an SEO agency based in London. There, he was tasked with tinkering around office computers and servers, visiting data centers to check the company's hardware hooked up to the internet world, and ensuring that consultants had proper access to the data before registering with customers. Growing up in a military household, Rich moved around the world in the early stages of his life, but now travels far and wide in games and online. After building his first computer when he was 13, he continued to develop his skills in the hope that cyborgs would eventually become a reality. Sean Endicott, news writer Source: Windows Central Sean started contributing to Windows Central in 2017. And became an official part of the team just a few months later. Today he focuses on everything in the news microsoft world. If it runs Windows 10, is run by Microsoft, or it affects our audience, it is in it with the rest of the news team. Sean also leads our Oculus Quest coverage and reviews Windows 10 applications. When he doesn't include news or writing about the latest tech, Sean is an avid American football fan. He coaches a team in Nottingham, England and even uses Microsoft Teams to share his play and study game film. Mauro Huculak, contributing to how-to writer Source: Windows Central Mauro focuses on detailed how-tos to help users make the most of Windows 10 and many related technologies. Since 2015, he has been writing for Windows Central. He has an IT background and is a recognized member of the Microsoft MVP community. When Mauro doesn't write a new tutorial, he's always trying to learn something new so he can share it with you. Read: Mauro posts on Twitter: [@pureinfotech](https://twitter.com/pureinfotech) email: mauro@mobilenations.com Cale Hunt, staff writer Source: Windows Central Cale to Windows Central 2016 to help with how-tos, reviews and general coverage surrounding laptops, tablets, pre-built PCs and accessories. Since then, the hardware has been piling up behind it, and there is no shortage of interesting new technologies to try and pull separately. When not writing, Cale has tinkering with his computer (and, of course, gaming), reading, playing guitar, and drinking coffee. Some of these hobbies move when it's not in winter, but not all. For those sweet three months of the Canadian summer, it's all about music festivals, cottages, and patios. Read: Cale's posts on Instagram: [@ceeceehaatch](https://www.instagram.com/ceeceehaatch) Mail: cale.hunt@futurenet.com Asher Madan, contributing game news writer Source: Windows Central Asher Madan handles gaming news for Windows Central. Before joining Windows Central in 2017, Asher worked at various gambling venues. He has a background in medical science and is passionate about all forms of entertainment, cooking and antiquing. He lives in Washington, D.C., Daniel Rubino, executive editor source: Windows Central's Daniel Rubino has been writing about Microsoft since 2007, back when the site first launched under the WMExperts banner. In 2010, he took over as editor-in-chief. His duties include staff management, content management, YouTube personality, manager reviewer, editorial and podcast co-host. Before working at Windows Central, Daniel was a polysomnographer at Weill-Cornell Medical College and NY Presbyterian in New York, a movie theater projection for 17 years, an emergency medicine technician in Connecticut, and studied for a PhD in linguistics in neurology. He studied at Sienna College, the University of Connecticut, Boston University, and the CUNY Graduate Center, and received degrees in political science and linguistics. After living in Long Island, New York for 13 years, Daniel currently lives in Worcester, Mass. Al Sacco, managing editor Source: Windows Central Al Sacco manages writing and editing teams and all editorial operations at Windows Central, making sure the content train operates consistently and on time, and always ensuring high quality standards. Prior to joining Windows Central in 2017, Al covered the company's IT and mobile technologies at IDG, CIO Magazine and CIO.com, working its way from editorial assistant to editor management for more than 13 years with the company. He passionately reads and writes, eats and drinks (coffee and Belgian lambic) and red sox. He lives in Boston. Dan Thorp-Lancaster, news editor Source: Windows Central Dan joined the Mobile Nations family in 2014 as part of a newsroom team covering all things suitable for printing on Google, Microsoft and Apple. In 2016, Dan has taken on the central role of Windows Central news and has since been blogging blogs exclusively about Windows, Xbox and the wider Microsoft ecosystem. Before joining Mobile Peoples and Windows Central, Dan lowered his writing teeth at Illinois State University. In 2013, he graduated with a Bachelor's degree in English and was interested in linguistics, rhetoric, and overanalyzing of every novel he has ever read individual attributes. Dan grew up in a small central Illinois town and was hooked on technology at an early age after getting his first taste of computing from the old Windows 3.1 machine. Dan currently lives in Eastern Iowa, but hopes to get out of the Midwest one of these days. Future PLC Windows Central is part of Future PLC, which also includes Android Central, iMore, CordCutters, and TechnoBuffalo communities. Every year this network of sites reaches more than 500 million users, with over five million subscribers and followers, and we see 500,000 user engagements each month.
