My name is Mr. Dylan James Morgan. I recently received my Bachelor's Degree in Mathematics from California State University Fullerton and completed the reference program. Since childhood I am interested in the educational process and I have also worked as a tutor for the pleasure I take in helping others and seeing them succeed. By taking this class, I hope to help you understand the power of mathematics and its use in the real world. I also understand that people find this topic frustrating and stressful at times, so I'll try to enlighten you through it with my humor. This site provides information about upcoming lessons, assignments, expiration dates, my expectations for the classroom, and links to resources that will improve your learning. Homework assignments will be placed on the classroom calendar so check it regularly if it is important to work through it to further your understanding. This 9th degree course is the first semester of algebra in which we explore operations on real numbers, graphs linear equations, solving linear and quadratic equations, solving systems of linear equations, polynomials, factoring, and applications. Through this class, I hope to provide you with the mathematical foundation and personal confidence to enable you to use mathematics in your future life. This course is the condition for the second semester of algebra and your graduation requirement, Geometry. This 12th degree course (which can be taken by counselor approval by 11th graders as well) is the study of the collection, organization, analysis, interpretation and presentation of data. We also examine methods for collecting data through the use of observation, experiments and surveys. I point one project per semester and these give you hands on and design your own survey as well as your own experiment/conduct your own observation. I also instruct about using the TI-89 Calculator to perform statistical calculations in an instant as I believe, because you've got it so far in mathematics, I'm no longer necessarily interested in your ability to perform arithmetic, but rather if you're able to interpret what these calculations deduce. Students taking this course are expected to take the AP exam in May. The condition for this course is Algebra 2. The unit plan for this course can be found here. Feel free to send an email if you have any questions about material in the course and/or want extra help after school. I'm always willing to stay until 5pm unless I otherwise announce it to the class.
